Welcome to our Pokemon Lets Chart all kinds of pokemon weaknesses and strengths. There are a total of 18 categories and below you can see how they stack. Pokemon Lets Go Type Chart LegendSuper Effective AgainstNormal AgainstNot Very EffectiveNo EffectDo you know about Same Type Attack Bonus (STAB)? You will deal increased damage if your move is the same type as the Pokemon you are attacking (For example, a fire move is being used on a Pokemon fire). In this case, the damage will be 1.5 times the normal amount. Again, even this can stack with other damage amplifiers. This game feature is something players should keep in mind when watching this Chart.Did You Know? You can transfer mobile Pokemon GO pokemon into your Let's Go game. You can see the full guide on how to transfer pokemon here. Pokemon Let's Go types function the same way previous entries in the Pokemon video game series have, but with so many categories it's hard to remember what kind of effective against others. Below is a full list of strengths and weaknesses of each type. Super effective means that this type of move will cause additional damage against enemies of the listed type. Weak against pointing out it will deal less damage, and super weak against means it will have little or no effect. Pokémon Let's Go Evee @SimoneOlivia the world's first real Pokémon game... The Type Charts method represents the Type effect that was popular long before Pokémon Go, with all the core Pokémon games revolving around them. In short, pokémon decide whether a strong or weak Pokémon - super effective or ineffective - fights others, inflicts additional or reduced damage - and receives more or reduced damamage - as a result. The Standard Type chart that has evolved across different generations will look like a second language for long-term Pokémon fans, but for new arrivals it may appear too difficult to even know where to start, so with that in mind we have put together a chart of our own type , as well as explaining how Type effectivness works and how planning is around it, just below. Pokémon Go types are exactly the same as in the main Pokémon games, but the effectiveness of those-style matches is slightly different: in short, things like effective attacks or counter-attacks are slightly different from the main Pokémon games – although the December 2018 update brought them a little closer. Here's a Map of Pokémon Go type to get you started on what works against what. As you may have noticed, there is also no Type immunity in Pokémon Go, unlike in the main series. But that's not the end of it. The removed immunity is: Ground immune to Electric Flying immunity to Ground Ghost immunity to Normal and Fighting Normal and Fighting Immunity with Ghost Steel Immune to Poison Dark Immunity with Psychic Fairy Immune to Dragon Instead of fully immune to damage, these originally worked like simple resitances. Now, however, they have been tweaked to form another layer of resistance, with common immune protection accounting for only 0.39 times the usual amount of damage - in other words, the type of immunity that cuts about a third of the damage received. Below is a full summary of the indicatorss applied to standard, super effective, ineffective, immunity and double-effective attacks. Not very effective - 0.625x damage, instead of the 0.5x damage done in the main series. Super effecive - 1.6x damage, instead of 2x damage done in the main series. Immunity - 0.39x damage, instead of 0 damage done in the main series. Double efficiency - 2.56x damage, instead of 4x damage done in the main series. In other words, the latest tweaks to this kind of effectivness bring them noticeably closer to the characters in the mainstream games - but still don't suit them completely. It makes this kind of effect all the more important though, so it's well worth getting to grips with those matchups if you can! Finally, it's your proficiency on three factors that will give you the greatest opportunity in PvP and The Gym scene and Type effectiveness, effectiveness, Pokémon Go moves, and has a good idea of the best Pokémon in Pokémon Go.
