As a mobile version of a phenomenal game of the same name, happy wheels perfectly restore the various unique transport tools and bloody images in the original. In the game, players use different means of transport, using the physics engine, to cross obstacles and reach the bottom of the game safely. The biggest feature of Happy Wheels lies in its high game difficulty and smooth and realistic physics engine presentation. The game provides players with bicycles, wheelchairs, electric cars, balance bikes, and other different transport tools. There are many dangerous traps such as mines, harpoons and spears to test your skills. Players must avoid these crises to reach the ultimate level. Although the game only provides over 60 levels, the higher difficulties still discourage many players. The operation and gameplay of Happy Wheels is simple. Players must follow the buttons in the game. In addition to the buttons in the left and right direction, there are also bounce buttons to help the player cross the shorter steps. You also need to be very careful in the operating process. If you miss it and become eternal hatred, the bloody game screen is still a little scary. For game screens, you can't mention the realistic graphics of Happy Wheels. Although the game uses only a flat presentation form, it has no conservative attitude to expressing the level of bloody violence. Not only does the character's suitability to cross steps easily cause damage, but after the character enters the dangerous zone, there is also a risk of being torn and crushed. Broken limbs and bloody images are still very unsuitable for children. Minors also have a certain mortality rate. So, if you are under 18 years old, we do not recommend you to experience this game. From the experience, Happy Wheels has certain difficulties. Besides the obvious traps in each level, there are often some hidden dangers, such as random falling metal garbage waiting. These things are always there. It can threaten the player's life, and some mines, spikes, destructive balls, harpoons, etc. on the surface are even more powerful. However, after only a few Your hand will be more flexible and it is difficult to stop you from stopping. Players just need to hold up and down arrow keys to climb, slide or go back. Use LEFT and RIGHT ARROW KEYS to lean. Spacebar, Ctrl, or Shift for specific actions. And z key to slide. When pressed, the player must grab what holds in his hand with the SPACEBAR or press the arrow keys to switch to other positions, to adapt to the terrain, and overcome obstacles. The player will start the game with a wheelchair whose task is to pass many steps and not to fall. It sounds very simple, but in fact a lot of players have had to give up on the first ladder. Because the head can completely hit some obstacles, causing the helmet to fall and you fall. Every time it hurts you, blood will bleed. And the special thing is that it hurts the heavier you, the greater the difficulty. And it's dangerous if you try to keep overcoming it. The first character is an old man in a wheelchair. The second character is a merchant who controls a private carriage. The third character is a boy with a bike with a one-passenger pass in the back. And the last one is a great woman in a silk car. The character change corresponds to the challenge level at all levels. The player's task is to shield these characters, to overcome obstacles to get injured. Some game levels will test your skills in an obstacle course dotted with demolition balls, spikes, gravity wells, giant spiders, and mines. On other levels fall freely off a cliff with a collection of umbrellas and bodies that will rain around you. Most levels have a milestone to reach, but you'll never be sure. Keep exploring the game level and having a nice laugh every time you lose your life. Have you lost an arm or a leg or all four limbs? Ignore the blood and keep going! When you leave the vehicle, use the arrow keys, shift key, and Ctrl key to move the shape's arms and legs. Each of the characters in the game behaves a little differently, but normally they end up falling in a place like a fish out of the water. The three buttons at the bottom left are for jumping, tilting left and tilting to the right. Use the left button to adjust the balance, and the bottom right of the screen is forward and backward. There are some buttons, and the operation is simple. so what is the difficulty of the game? The player will control a character to run a wheelbarrow and use the wheelbarrow to overcome various obstacles to reach the end. A simple sentence summarizes the entire content of the game, but the content contains many traps. Maybe a car will collapse in the sky and hit you. Perhaps the usual road on the ground will suddenly increase the speed and rise and pinch you to death. Or maybe something flying in the air is a bomb. When the game character encounters various traps, he can break his hands and feet and can be separated from his flesh and blood. The most exaggerated is that it blows all his person to pieces after encountering a bomb. Yes, it's a piece. It surprised us when a game that was supposed to be a normal test of player operations suddenly came up. It has been miserable by the difficulty of the game, but this stimulating image is unacceptable. Even more exaggerated is that if you encounter a trap and do not die, the player must continue to operate the game character with a disabled body to continue the game, and look at the bloody game character. We recommend that children do not play. The operation of happy wheels MOD APK is very difficult to use on purpose. Players must operate characters from all walks of life to ride a simple tool cart to the end. This sounds very common, but there are many unexpected locomotive traps on the road. If you get it, it's just a broken hand or a broken foot. Otherwise, there's a way to die. Basically, in addition to passing the level, seeing different methods of death is also one of the great pleasures of this game. In addition to chasing strangeness, Happy Wheel is also a game that emphasizes clearance technology. It is very difficult to pass the level quickly and without injury. This game has a high level of research elements. And it was also a popular live game in the previous period. Happy Wheels ranks 51st. The number of installations exceeds one million, and we consider the content to be suitable for adults over the age of 17, which contain bloody and violent content. Content.
