Rotation control android

Dynamic Rotation Control is an app that allows you to block android screen rotation horizontally or vertically. It was created to address the absence of the feature in versions prior to Android P, which only allow you to leave the screen locked in portrait mode. The app is free and works on Android 4.1 onwards. Our opinion The greatest merit of Dynamic Rotation Control is its simplicity of configuration and use. It does not require root or complicated settings, requiring only the user to provide permission for the app to change system settings. Once done, it is ready for use. There is only one screen in the app, where changes are made. The most relevant of these is sensitivity, where sensitivity is established as a function of the angle of rotation. That is, the smaller this bar, the more the user will have to rotate the phone until the app shows the location lock button. You can also increase or decrease the size of the button and extend (or decrease) the time the button will appear on the display. In addition to that, the app screen shows a key to enable the app to work from startup and a button that allows you to disable the feature. Although Dynamic Rotation Control does not have a Portuguese version, the interface is as summarized - as well as features - that this feature does not interfere with usability. With a basic knowledge of English, you can use it without any problems. Another positive aspect of the interface is its discretion. There is no ads in the app and no floating button after closing the settings screen. The service becomes completely imperceptible until the screen is rotated, when the button to lock the position seems to lock the display position. Dynamic rotation can be done on previous versions of Android and takes up little space on the device. TechTudo tests were conducted on a Moto G5S Plus smartphone with Android 7.1.1, without crashing. Pro Does not require root No advertising Simplicity of Light Wheel adjustments in previous versions of Android Cons Easily controls screen rotation from the notification bar. Even with fixed screen apps, you can still force them to change their orientation.◆◆ Recommended for people who: • Want to use their smartphone's home screen in landscape mode • Want to use apps in landscape mode or video in portrait mode • Do you always want to use their tablet in landscape mode • You want to switch between fixed orientations with a single tap via the status bar • Do you want to use landscape mode , complicated configuration◆◆ Horizontal (reverse): The screen is fixed horizontally upside down.- Vertical: Automatically rotates to a vertical orientation based on a sensor.*Some modes may not be usable depending on device specifications.<div jsname=WJz9Hc style=display:none>Easily control screen rotation from the notification bar. Even with applications that stare at screens, you can still force them to change their orientation.◆ Do you want to use your smartphone's home screen in landscape mode: Whether you're playing games in landscape mode or video apps in portrait mode- You want to always use your tablet in landscape mode- You want to switch between fixed orientations with a single tap through the status bar- You want a simple application without problematic configuration, complicated◆◆ Automatic: the screen rotates on the horizontal head down.- Horizontal (automatic): automatically rotates for a horizontal orientation based on a sensor.- Vertical: the screen is fixed for a vertical orientation.- Vertical (reverse): the screen is fixed vertically upside down.- Vertical (automatic) : automatically rotates on a sensor-based vertical orientation.* Some modes may not be usable, depending on your device specifications.</div><div class=show-more-end> Chat with all your contacts, quick and easy The best place to download movies, music, and applications for Android Root quick and easy A lightweight version for basic devices Facebook Messenger official Can force a particular rotation in fixed screen orientation applications with Rotation Control PRO APK v3.3.9. It has a simple design with easy-to-understand and user-friendly functions. Recommended for people who: - Want to use your smartphone's home screen in landscape mode - Want to use landscape modes in game or portrait apps in video apps - Want to use your tablet in landscape mode - Want to switch between fixed orientations with a single tap on the feature status bar ▶Rotation settings You can set screen rotation ▶Scan notifications Easily control screen rotation from notification bar. ▶App settings You can set different rotations for each app. Rotates based on the preset screen orientation when the app starts. Go back to </div>original canvas when fecha or alicative. Screenshot: QR Code Author HDM Dev Team Latest version: 3.4.0 Release date: December 04 2020 APK Download (3.55 MB) Can force a particular rotation on screen-oriented apps. A simple design with easy-to-understand and user-friendly features.-=Recommended for people who:- Want to use your smartphone's home screen in landscape mode- Want to use games in landscape mode or video apps in portrait mode- You want to always use their tablet in landscape mode- Want to switch between fixed orientations with a touch-only settings bar=-=Features▶Rotation settingsCan configure screen rotation.▶ Notification settings Easily control screen rotation from the notification bar.▶ For app rotation settingsCan configure different rotations for each app. Rotates according to the preset screen orientation when the application starts. Returns to the original screen orientation when the application closes.▶ Special settings of the Detect case when chargers or earphones are connected and rotate to the preset screen orientation. Returns to the original screen orientation when they are removed. Difference from the PROThis version is a free version that allows you to control the operations and functions of the app. It will expire 2 days after installation. Pro version The screen rotates according to a sensor. Horizontal: The screen is fixed to a horizontal orientation. Horizontal (reverse): The screen is fixed horizontal upside down. Horizontal (automatic): Automatically rotates to a horizontal orientation based on a sensor. Vertical: The screen is fixed to a vertical orientation. Vertical (reverse): The screen is fixed vertical upside down. Vertical (automatic): Automatically rotates to a sensor-based vertical orientation.* Part of the rotation direction may not match depending on the device specifications. This is not a problem with the app. This app uses the accessibility service. This is used to detect when an app is launched or closed, and allows you to change rotation actions for each app. This information is not stored or shared.
