Edit Share A Light Jet is a small aircraft capable of high-speed flying, and those depicted in TRON: Legacy have all been combat-ready. There are at least two known models of light jet: a small one-man interceptor craft and a larger, slower fighter with a crew of up to three. Characteristics[edit] The smallest Light Jets lack the cockpit and are generated from batons in the same way as a light cycle. The pilot rides on top of the airframe, straddling a saddle in a crooked position. The arms and legs of the pilot each manipulate one of the four corresponding wings. Forward-fired automatic weapons provide sufficient firepower to waste a program with a single shot. Like the light cycle, Clu seems to operate a modified beam of light as its personal craft. In addition to its yellow color, the Clu light jet sports two pairs of rear wings and four wing-mounted weapons instead of the more typical two. The larger Light Jets are permanent structures, capable of housing a crew of three within a forward cockpit. The central sofa can rotate and slide to the back of the vessel, locking into a tail-mounted gunnery dome with tail cannons capable of firing a steady stream of automatic fire through a narrow arc. The forward-mounted guns are fixed and simply shoot in the direction the vessel is facing. In addition, the vessel mounts a three-race fast fire gun on its chin, right in front of the pilot's station. Both Light Jet models have the ability to generate light ribbons to further prevent stalkers. The smaller craft generates a single band, while the larger craft can generate a couple of them. Official release[edit] The following is a quoted excerpt from the non-flash Light Jet page of Disney's TRON: Legacy website: Made from a modified Light Cycle, these aircraft soon became the backbone of the Clu shock-and-awe fleet. Light Jet is a cannon-mounted aircraft used for pacification and elimination. Like the light cycle, these one-manned nozzles emit a wall of light in their wake as they fly over the grid. The depth, power and skill of the individual pilot increases the range and efficiency of these jets. Clu hasn't used the light beams much: they needed too much power to create and maintain, and trained pilots could be better used as guards or Black Guards. The futuristic light aircraft engaged in an air battle set to Daft Punk's music showed the characteristics of 3D animation. It was the logical development of the light cycle is that it had to be a light jet, the author said Kitsis in TRON: Legacy extra features. The movie will be out on Blu-Ray and DVD on April 5. A lot of time was spent on light jets because we're nerds. If you were interested in finding out what the crew looked like for you and what it looked like behind the scenes, take a look at the exclusive preview clip from TRON: Legacy's DVD and Blu-Ray bonus material. Seeing the transformation from the physical structures the actors filmed in to the final computer generated images we see on screen is impressive, and it's clear that it took a lot of innovation - and imagination - to come up with the sequence. This Tron Legacy Light Jet has a top speed of 500 or more, it needs the gyroscope to remain level due to problems, when it's flying and you do it swing, you need to use the roll to move and a little pitch otherwise using full pitch and roll will cause it to crash. When you take off on the ground at least use the path when the plane is at 300 or it can cause problems a little later when flying and it can move left/right a little. Features, 1 for forward weapons, 2 for rear weapon that moves using vtol and trim. This plane is not good for tight turns. Enjoy, also there may be some loose replicated parts that will fall off, don't worry about it. Last updated . Click Updates above to see the latest news. These are light cycles from Tron Legacy. They include Sam Flynn, Clu, the blue team and the orange team. They each have a Tron Legacy figure that includes an identity plate. The light trails can be easily removed. The back can also lift up so that the figure can sit up more. Each cycle also includes a control panel in front of the shape. This set is built upside down to allow the character to sit up as they do in the film. This is a fun and simple building that can be played with. Each cycle has a clear location just below the figure where the engine is. There aren't many Tron Legacy toys out on the market which is why this would be good to have out there.
