## Card thief upgrade guide

Draw theme or shape. Step 2. Now on one of the funniest part - choose your color palette. The color combinations for this are endless. You could opt for a cool palette like I've done here. You can also create your own optical illusion with warm colors, a mixture of random colors or even a monochromatic palette. Decide on the specific order you want the colors to be in the whole paper and remember it while attracting each row. Step 3. After selecting The stripes at the top will be widened and plan accordingly. A significant detail is to ensure that you end up with a single number of stripes. You will see why it is important in a minute. Once we have all the stripes drawing, let's erase the outermost circle. Step 3 - Inking and shading Now, we will use a sharpy marker to fill in the outer circle using a turn pattern. That's why it's important to have an even number of stripes. If the streaks were awkward, it would throw the pattern out of sync. Large sharpy markers won't be able to paint in squares all the way to the edge, so we're just as close to the edge as we can for now. Continue to do this for all circles. Now, let's take a little pen and fill in small gaps that we can't get with big markers. The final stage is to create a dark gradation into the center hole. I'll use a 9xb graphite pencil to put in a base tone. You can also use 4b or 6b pencils for this. And I'll use a blending stump to smooth the tone. And now I'll use a charcoal pencil to put in a very dark layer for holes. And that's it! Now all we have to do is look at this drawing at an angle to see the 3D optical illusion. Visual confusion.
