## Samsung accessory service draining battery

Ratings & Awards Reviews performance provides a VIEWPOINT of what users think of your app. Here are the key metrics to help you identify how your app is rated by users and how successful is your review management strategy. The number of reviews, total 677 Avg Rating, total3.5 Samsung Accessory Service provides a stable environment in which you can use a variety feature by connecting accessories to your mobile device.&lt;br&gt;This service is compatible with various connection settings, and it makes using accessories with your efficient and convenient mobile devices via application manager.&lt;br&gt;(e.g. Galaxy Wearable, Samsung Camera Manager Inst.) &lt;br&gt;&lt;br&gt;Samsung Props Services can be used with these accessories when connected to a mobile device.&lt;br&gt;- GALLAXY Gear, Gear 2, Gear Series, Galaxy View &lt;br&gt;- Samsung Gear Fit 2&lt;br&gt;- Samsung NX-1&lt;br&gt;&lt;br&gt;Samsung Accessories service provides the following features for accessories and a mobile device.&lt;br&gt;- Connections with send/receive data&lt;br&gt;- Transfer Record&lt;br &gt;- WebProxy&lt;br&gt;&lt;br&gt;this permission is required for app service. &lt;br&gt;[Required permission]&lt;br&gt;- Deposit: It is required to transfer media files to props devices.&lt;br&gt;&lt;br&gt;If your software version is lower than Android 6.0 , please update the software to configure App Authorization.&lt;br&gt;Previously enabled authorization can be reset on apps menu in device settings after software update.&lt;br&gt;&lt;br&gt;If you install or move this application to external storage, it cannot work properly. More user reviews affect the installer conversion and app rating. Featured and useful ad reviews are the first to be noticed by users and in case no response can affect download rate. That's why he highly recommends answering them. Beaware, not updated!!! Terrible! After an update, Samsung Galaxy Watch Active loses answer called green button while someone is calling you. Now you can lower calls only! And there are no notifications called Miss to leave visible on view, so you won't get any missed notifications from now on! P.s. Will update my review, if these bugs are going to be resolved! I'm using Galaxy watching 42mm with the Huawei Mate 20 Pro. The watch has worked ok from last one year with some disaction but overall no problem. But after the last update in view, see Keep displater in every 10 seconds. Phone also get Android 10 update. Now unable to use my view, please update the viewing software to remove the bugs. Update this app also doesn't help connectivity issues. Like many, since this app upgrade, my S3 Gear won't stay connected to my phone. It happened before after previous updates, but was still fixed itself, usually within 24 hours or so, so I was optimistic that it will be OK soon. Service is battery drainage on my OnePlus 7. I use this service as it is necessary to connect my phone with the Samsung Gear Sport Smartwatch. Please please this problem, I've never seen this application battery at these rates until recently. This is great app to sync and uses the Watch+ phone combination completely. The latest update came with a refined UI, however there was a crazy battery. I use one plus 7 that usually lasts a day and half for me. When I updated I couldn't use the phone for more than 10hrs. So I uninstalle the app. Today, after an os update I tried my chance to see if this problem is solved, amazing it appears to be fixed. It's over half a day and the battery usage seems to be normal now. Developed by Samsung Electronics Co., Ltd. Samsung Accessory Service is assigned to Communications Last update was in December 26, 2019and the current version is 3.1.93.9125. Samsung Accessories service has been downloaded 10,000,000+ times. Samsung Accessory Services downloaded to view all other keys and revenue click here.samsung.accessory Samsung Props Service has a user review 767a. 10-18-2018 12:09 AM like 0 Update for this morning: Bring my charge to today's recharge work look at and do some testing. I extinguished automatic updates to my phone's Gear app. I reset the phone and did not restore any backups (I don't use anything that hasn't been on the phone or shop music or any other personal content on it. My view is the non-LTE variants and I set the following options: Notification (in app Gear): all in except Calendar, Clock, Facebook, GMail, FB Messenger, Google SMS app, Phone, and Phone ServiceSamsung Health HR at every 10 minutes, no activity detection, inactivity alert cutting. The unlocked 5, Auto Low on, timeout 15 sec, AOD off, Wake-up gesture on so after 2 1/2 hours, it appears to be unloading normally at about 1.6 per hour. This is slightly higher than my usual average intake of about 1.2 per hour over the past year, but given how it was the last couple of days (nearly 9% per hour!) I'm going to take it. Thanks, I will give this a shot, the HR controller is set frequently. 10-18-2018 06:34 AM like 0 I can leave for work and come home 12 hrs Later with around 70% battery. I loaded it at 100% and put it in bed. Last morning 2 it was at 30 when I lifted up 7 hrs later. go to try a recipe at factory and not make the updates. 10-18-2018 08:01 AM AS 0 Data so far: 38 to 24 1/2 hours (1.55% per hour). I'll call this resolved for now.a. 12:00 pm like 0 I deleted the faces look uploaded and which are making a difference, but they are still not straightforward. 10-18-2018 03:59 PM Like 0 Minor looks to have been fixed on a simple restart. 10-18-2018 04:19 PM Like 0 Exciting. My S3 gear started having severe battery drainage 2 days ago too. It continues to have problems with sporadic fast battery fast. I made a full recipe of the S3 and re-paired with phone. Seems ok, till today. Very fast battery drainage again. I'm not sure if the view received an update or something. But something is not right... suddenly. I have 10-18-2018 05:14 PM like 0 Thanks for this and other forums. This issue is a Samsung problem. Somehow a common core app or to watch the updated firmware and it is now causing fast battery drainage. My concern is that this problem will damage the battery (deep water) before a given fix. 10-18-2018 05:21 PM Like 0 Lot S3 Master S3 on Samsung's forum noted the bugs, and batteries are drying far faster than normal with no obvious cause. Samsung's forum moderators also may not seem to comb exactly what the cause is, but some speculate that it might be due to an app. Right now, though, Samsung is aware of the issue, but there's no timeline on a fix. The company says a future update will solve the problem. What was on Google News 10-18-2018 09:20 PM Like 0 I started having the problem yesterday. Down to 10 in a little under 6 hours. I read in the XDA forum on factory reintellations and decided to take a step further by doing this: Keeping in the power button through until 'rebooting...' Message. Repeat press power button until boot menu displays. Press the Home button until 'Recovery' is selected. Press and hold the power button until restart. Set up view as new view by restoring backup. After doing so, I'm down to 83 in 8 hours. This is with me playing around with it for about 20 minutes to install apps and switch settings. Just over 2% per hour. 10-18-2018 09:42 PM AAS 0 Monday morning I noticed the same thing there During the day the battery will normally be ejected. More than night is when I noticed a 70 drop. I turned it off in the evening so as not further to run down the battery until a row is identified. I typically have DND on the night. Gear for the S3 Classic. 10-18-2018 09:54 PM Like 0 I find that it's something happening over the night. I put me on DNC before bed and put it on the charging as I always have. When I got up in the morning I shut it down (not reboot) and then turned it back on. This stops new battery drainage bug for me. 10-19-2018 08:37 AM LIKE 0 My Brain also seems to still arrive at night. I put my view to track sleep and it will be from 100 percent down to the low wines. Last night it didn't happen there for the first time in days. We'll see what happens today and night. 10-19-2018 10:12 AM Like 0 Minor Started the Other Day Too. Went from 100% to 15 in about 90 minutes. The next morning I charge it up to 55% and it turns itself off in 10 minutes. Has Samsung said anything about this mend and is definitely now tallied to Samsung Health? 10-19-2018 04:20 PM Like 0 I had problems even cutting up suddenly. During the day it would just gobble the battery. A couple of nights ago, while I slept with set the viewing of the DND, the battery went from 100% to 23%. After the drive from the internet, I confirm that in Settings -&gt; Apps -&gt; Samsung Accessories Service has been using a lot of battery. 1. I went to the storage tab for Samsung Accessory Service and cleared the cache. 2. I deleted Galxy Wearable app. 3. I restart the Gear S3. 4. I reinstall the Galxy Wearable app. He walked in to recourb and restore the Gear S3. And uses my battery gear S3 was very low. It's been a day or two now and it seems that the problem is resolved for me. 10-19-2018 04:43 PM LIKE 0 same issue here. It improved a bit after erasing samsung health, making a reset, but they still aren't where it was. 10-20-2018 03:45 PM Like 0 Lot Report on Samsung's support of Galaxy 'Gear' looked suddenly lost endurance battery, me included. Symptoms Are at 100% charge in less than 12 hours that started a couple of days ago. I haven't made any changes at all (no change settings, watchfaces, apps, etc.) nor had any software updates that I'm aware of. Anyone else out there this issue? Maybe another N7 disaster — Gate-like? 09-19-2019 07:47 PM LIKE 0 Delete the portable app. I believe that was the problem by Samsung Health. 09-19-2019 07:48 PM Like 0 Well, more than a year after the last post, my classic s3 started with the drainage of the battery. It's an Amazon renew that is supposed to have battery equal to at least 80% of the new. First, I got more than 2 days between charges. I guess there's a wild running app. Try a reinstalling to see if I can figure it out. 11-22-2020 04:54 PM Like 0 Well, more than a year after the last post, my classic s3 started with the drainage of the battery. It's an Amazon renew that is supposed to have battery equal to at least 80% of the new. First, I got more than 2 days between charges. I guess there's a wild running app. Try a reinstalling to see if I can figure it out. Never buy use and return, or renew, as Amazon third party scammers them like they call them.... they palet bought junk. I bought 4 renewed items in a row that was someone else's return phase.... didn't work of course, turned them instantly and only bought new on sale now. Recently my wife went down the same road, except her last couple devices hooked together for a while like you before dying... So she finally decided to listen to me lol. Renew the battery watching the battery be killed.... learn from this and move on hand, definitely try a factory recipe before you fully write it off though. 11-23-2020 05:44 AM LIKE 0 good thing about renewing is to have a 90 day return window. I made the recipe and fully stocked it. Wore it last night to follow my sleep. 8 hours later, the watch was at 15%. I then checked it in battery and S health uses 47%. Not sure how to slow this down.11-23-2020 09:10 AM like 0 OK, my problem has been rectified. After the recipe, I started to get overwhelming and last for the look. Not sure why after a month of having it the trigger it, but not before. Before. I thought all the updates really messed it up. Watching that day was basically inconsecutable. It wouldn't go to apps and was taken forever every time I tried. Then all of a sudden, it started functioning correctly. Battery life was really good. This morning I still had more than 30% leave after 45 hours of the chargers. I am really happy with how it works now.11-27-2020 10:48 AM like 0 0
