More Augusta Pownall | 14 January 2020 | Leave a comment Northumbria University graduate Rocky Brooks has designed a disposable and fully recyclable flat-pack bed for dogs to help reduce costs at rescue centres. More Natasha Hiti | 8 August 2019 | Leave a comment London studio Pearson Lloyd marries the convenience and economy of flat-pack furniture with quality materials in a chair designed for the new Copenhagen brand Takt. More Augusta Pownall | 15 May 2019 | Leave a comment Lausanne design studio Panter & Tourron's Tense collection is a set of flat-packed furniture essentials that together weigh less than 20 pounds and can be easily assembled anywhere. More Augusta Pownall | 16 April 2019 | Leave a comment Mexican architecture firm Paola Calzada Arquitectos produces line of sturdy flat-pack furniture using recycled bottles and wood-fiber valchromat material. More Ali Morris | 22 December 2018 | Leave a commentary on London-based architect Henning Stummel launching a leather and birch plywood furniture collection during the London Design Festival, which presents inside his unusual, bright red home. More Katie de Klee | 16 September 2018 | Leave a comment Danish furniture company Carl Hansen & Son has released the first line of office furniture, based on his collection Pieces. More Bridget Cogley | 30 May 2018 | Leave a comment Niklas Jacob has teamed up with 17 other designers to produce a range of satirical flat-packaged products in the style of IKEA furniture, for Milan design week. More Günseli Yalcinknaya | 20 April 2018 | Leave a comment Hem continues to explore how high-end design can be flat-packed, with the launch of a sofa and a conference table that can be shipped in standard boxes. More Amy Frearson | 16 April 2018 | Leave a comment Online startup Floyd has designed a suite of flat-pack furniture to be easily taken apart and moved, intended for new city dwellers and offer a long-lasting alternative to IKEA products. More Eleanor Gibson | 30 March 2018 | Leave a comment This flat-pack floor lamp from Vancouver studios Knauf and Brown is weighed down using a bag of water, which comes empty to make the product easier and lighter to ship. More Eleanor Gibson | 8 November 2017 | Leave a comment Start-up company Pentatonic aims to radically transform the culture of consumption with a range of furniture and products created from food, electrical, plastic and textile waste. More Alice Morby | 4 September 2017 | 1 comment Sausage-shaped party balloons are used to ensure self-assembling furniture and toys designed by Kingston University graduate Fern Toynton. More Alice Morby | 30 July 2017 | Leave a comment BUY DISCOUNT FURNITURE ONLINE, FREE DELIVERY TO ALL PRODUCTS! A new generation of furniture design takes the fight out of the self assembly - and flicks off its old image. Clare Dowdy explores next-level flat-pack designs. Scandi minimalist furniture is ubiquitous - and addiction rates continue to be high. Wherever you live, chances are your go-to supplier without decoration, pale, wooden chairs/beds/libraries are Ikea. The Swedish company has cornered the market in cheap and cheerful furniture with an immune aesthetic. More like this:- Are these ultimate fantasy houses?- A house where the body and soul can rest-The art of elegant compact livingBut, while such pieces don't force us to dig deep (financially speaking), they come at a hidden cost: hours spent on hands and knees in front of leaflets, struggling with myriad parts and the dreaded Allen (or hex) key. Because Ikea is the pioneer of flat-packed furniture, and has been since the beginning of delfi simple, stable, circular table 1953.For Ikea, the system was a solution to the high cost and damage rates of transporting furniture through mail order. The Swedes had hit on something else: by reducing their construction costs, they could pass on some of the savings to the customer. Many other manufacturers followed suit. To such an extent that in recent decades, the joys of self-assembly have become known to many of us around the many in the design fraternity have mixed feelings. We love Ikea because it's cheap and efficient, but it has reduced the quality of our environment, says Tom Lloyd, co-founder of PearsonLloyd's London product design practice.John O'Leary, design director of the new British flat-packed Swyft sofa company, echoes this: Now, we all expect just more in terms of quality, design and production, compared to when the flat-pack revolution first evolved. , Delfi Circular Table is a self-assembled design, and launched by Ikea in 1953Euro, designers around the world create ranges that distance them from the low-quality image of the flat-pack. And they apply as much design thinking to the construction of these pieces as they are to aesthetics. In some cases, such as the Cross Chair pearsonlloyd for the Danish company Takt, the elegant appearance of the chair is informed by the intuitive way they are together. Lloyd explains the thought: We got the idea of the wine box, where two pieces of cardboard slide together, with a slit to make a structure. We imagined that each customer would see two notches cut from the transverse frames and see how it would work. Once you throw these two elements together you have a solid structure to start with, he adds. The cross chair was designed by PearsonLloyd for Takt, and is based on a simple, stable structureThere business hoping to push the design up to a flat-packed agenda include Swedish manufacturer Hem, Mexico's Luken, and Nomad in the UK. Most of these products boast that they need no or very few fixes, and having a plan that makes the assembly quite self-explanatory. At Swyft, for example, O'Leary developed special connectors made of cast aluminum and folded steel, which allow the base, hands and back of the sofas to slot together quickly and safely. Box freshSome designers see flat-pack as a way to address the issues around hardware loss. Luken's Mecedora chairs are made from recycled plastic milk bottles. For founder Paola Calzada, 'the origin and commitment of the company is not measured in sales or revenue, but in the quantity of the reusable product'. The high-density polystyrene panels are flat, hence our products are born flat, and slot together, says Calzada. And because this material lasts a century and is so resistant to elements, we didn't want screws or glue to run down over time. Chair Luken is made of high-density recycled plastic, and sockets together Similarly, Nomad's original Ocean Plastic Chair is cut from a 100% recycled plastic ocean sheet. The five-piece slot along with no tools or fastening, explains London-based architect and designer Henning Stummel, who is behind the Nomad series. Similarly, Nomad's sofa is made of sheet of sheet of sheet, and a roll of fabric or concealment, maximizing Nomad efficiency and eliminating any waste from the production line. Stummel says. The Nomad chair in birch ply is easily assembled and dis-assembled. What's surprising about this chair is that when assembled it doesn't inform you of its flat-packed nature, says Pearson Lloyd, co-founder of Luke Pearson.Creating well-looking, good-quality furniture easily assembled at home involves many hours of testing and prototy printing. This additional planning effort is possible in part because of the distribution model used by these companies: direct sales to consumers and not through shops. You can afford to spend more time and money making these products because there's less of a mark-up (than going through a wholesaler or retailer), so you can get a higher quality product, says Lloyd at PearsonLloyd.The Luken flat-packed furniture comes in compact boxes; these suits are digital natives who are increasingly comfortable with buying such items online. And its ecological credentials - carrying smaller boxes rather than bulky ready-made items results in a lower carbon footprint - makes flat-packed furniture particularly attractive these days. Swyft sofas are transported in a box that takes up a fifth of the space of a sofa that arrives already assembled, and nomad flat-pack ocean plastic chair in a standard pizza box. In addition, furniture dismantled as easily as assembled makes sense for light-footed Generation Rent.While individual customers have a growing range of good quality, good-looking flat-packed furniture to choose from, the world of contract furniture - producing items for commercial settings such as hotels, offices - has been in practice for years. However, instead of being assembled by the end user, the assembly is usually carried out by special installers. Self-assembly has become simpler - the three-seater Swyft sofa is pictured before assembly manufacturer Danish Carl Hansen & Son has recently entered into practice with Preludia - its first series created specifically for the contract market. Preludia's designer, New York-based Brad Ascalon, explains: We're not trying to lower the quality or design to fit into a smaller box. As an alternative to relying on special installers, can charge high fees for this service, UK manufacturer Allermuir has a chair for buying contracts that is simple enough for anyone to assemble. Designed by PearsonLloyd, the wood legs of the pop chair screw into aluminum frame elements. The curved back is then trapped in place, with no visible fastenings. Meanwhile, Ikea has also tried to improve its batch of self-assemblers. The solution: solution: pin, which was invented by prototype engineers at the Ikea design store in the Swedish city of Älmhult. It is a small ribbed accessory that grinds at the end of the wooden legs. Which means that back home, customers can click them directly on a corresponding pre-drilled hole at the bottom of a table top. Flat-packed Swyft sofas can be easily moved from property to property If good design can help self-assembly shake off its poor quality image, then the future is flat-packed. As Keiran Hewkin, founder of Swyft, puts it: I think the question really should be, if the build quality is just as good, why would you want something that's bulky, in a piece and can't be moved or possibly taken to your new place? This is really a compromise and a restriction on your lifestyle, not the three to five minutes it takes to gather the piece.
