Faith family medical patient portal

Update: Linda J. Volvic, MD, Associate Professor of Clinical Medicine, Department of Family Medicine, UW School of Medicine, School of Medicine, University of Washington, Seattle, Washington. Also David Zieve, MD, MHA, Medical Director, Brenda Conaway, Editorial Director, A.D.A. It has also been reviewed by the M editorial team. Click here to log in to the patient portal For many patients, cancer diagnosis often results in a wave of stress and emotion in it. It also comes with questions, documents, appointments, prescriptions, and medical expenses. The American Cancer ® (CTCA) understands how difficult it is to manage cancer treatment. To help you and your caregiver navigate the complexity of your cancer journey, we provide the myCTCA Patient Portal, a web-based tool designed to connect with your care team, manage appointments and view medical information. Use the myCTCA portal to review lab results Update your prescriptions View medical documents On the myCTCA portal, which manages appointments and manages claims, you can also send emails to members of your care team, answer frequently asked questions, and receive email notifications about upcoming appointments and lab tests available. The myCTCA portal is not a substitute for the compassionate and personalized care provided by CTCA doctors and clinicians®. You can still talk directly to members of your care team who are willing to reach out, address concerns and answer questions. However, the portal provides another option for communicating with the clinical team. Learn more about the ® standard of care, myCTCA also offers a variety of resources to help you learn more about cancer types, treatment options, and members of the care team. Includes: Links to physician biographies, clinical trials, and treatment information The Cancer Center 360 blog provides weekly insights, information on cancer treatment, research, side effects, and general cancer-related ®. The myCTCA portal is designed to help patients safely exchange health information and medical records. To keep patient information safe and private, we recommend that you perform the following important steps: Do not use a regular e-mail account to exchange medical status or treatment emails with your medical team. The myCTCA portal is designed to enable secure communication. Do not share your myCTCA portal username or password. If you have any technical issues with the CTCA portal, call helpline 24/7 at 877-448-1725. This is only for technical issues, not for medical questions. If you need emergency medical assistance, dial 911. Andrew Brett Wallis/Getty Images; Courtesy of Laura Matthews: It may sound quirky, but a homemade family chart showing health history can reveal as much about the risk of various diseases as expensive high-tech genetic screening tests. When Cleveland Clinic researchers compared the risks based on family history with those of personal genomic screens testing for common DNA mutations, a simple history flagged far more people who could benefit from step-by-step monitoring or testing for certain mutations associated with breast, colon, or prostate cancer. Most surprisingly, genomic screening missed all people at high risk of colorectal cancer, says Dr. Charis Eng, chair of the clinic's Institute of Genomic Medicine. So take the time to bring your medical history up to date. Here's how: include all the conditions, not just what you think is genetic. Shared environments and lifestyles revealed in family history help explain the risk of chronic diseases such as high blood pressure, type 2 diabetes and heart disease, says Dr. Nedal Aller of the University of Texas Health Sciences Center in San Antonio. Don't forget dads When 2,505 women filled in their family history, they were much more likely to enter breast and ovarian cancer cases for their mother's relatives than their fathers, a 2010 North Shore University Health System study found. However, the cancer risk gene is likely to be inherited from the father's side. And when evaluating their odds, women didn't take cancer seriously on their father's side, says lead author Dr. Wendy S. Rubinstein. Both sides matter, Dr. Rubinstein says, and they are more likely to get the information they need from their grandmothers, aunts and female cousins than their relatives of men who often don't know about family illnesses. Get net advantage Many websites help you gather information, but some exclude key relatives or provide limited entries before you need to pay. Two free highly rated sites: • Portrait of My Family's Health, U.S. Surgeon General (familyhistory.hhs.gov) site contains all diseases and is an important step in My Generations, North Shore University Health System (nor From thshore.org/genetics/mygenerations), the tool translates family history information about cancer into risk assessments (average, moderate, or high) and provides detailed advice to suit your findings. This content is created and managed by third parties and imported to this page so that users can provide their e-mail addresses. You can find more information about this content as well as the piano io content that will tell you information about your family's health. At family gatherings, discussing Down the diseases and conditions that others in your family have. Building a family medical tree using tools like the U.S. Surgeon General's Portrait of My Family's Health: Disclaimer health.harvard.edu/familytree: As a service to readers, Harvard Health Publishing provides access to a library of archived content. Note the date of the final review or update of all articles. The content on this site should not be used in place of direct medical advice from your doctor or other qualified clinician, regardless of the date. Johns Hopkins agencies have guidelines in place to protect your privacy. Patient records are confidential and managed by the Health Information Management Department. A patient with a legal medical mandate or his/her agent may approve the release of the patient's confidential information. To help you maintain your organization, Johns Hopkins agencies offer MyChart that allows you to digitally store organized records of your medications, doses, allergies, medical and surgical history in one place. It can include personal data, doctors and emergency contacts. To request a copy of your medical records or send medical records to a third party, download and fill out the Patient or Patient Representative Request for Copy of Patient or Patient Health Information form. To obtain a copy of someone else's medical records, download the appropriate form: The form must be completed by the patient or patient's representative and clearly include the date of service, the specific type of record required, and all other information indicated on the form. You can also obtain a copy of these forms at the Johns Hopkins facility where you received care, or ask them to mail, email, or fax the form. Copy costs Processing fees and copy fees may apply in accordance with federal and state laws: If the records are released directly to your private physician or other medical facility, there will be no charges associated with copying your records. For copies made public to third parties at the request of a request or personal agent, a fee of \$6.50 applies to some electronically maintained medical records, and fees of up to \$0.12 per page and a flat labor fee of \$0.90 may apply to some of the medical records stored on paper or microfilm. Requests from third parties: Third parties may be charged a flat fee for acquisition in addition to fees associated with the creation of these records. Costs may vary by facility and are subject to change in accordance with state and federal laws. Johns Hopkins Hospital contracts with CIOX Health to process specific record copy requests. If a recording fee is incurred, an invoice will be issued by CIOX Health or the hospital's Health Information Administration, including payment.2: Submit a form Select the facility where you received care to find information about how to submit medical records. If you request medical records from a Johns Hopkins facility other than those listed below, please call the facility directly to know where to submit your request. Drop the form filled out by email, fax or the appropriate address/fax number below. Note: Medical records are faxed only to other health care providers or facilities for continued medical care. General Medical Records Johns Hopkins Hospital Psychiatry Health Information Management Division Myerville, Room 140 Baltimore, MD 21287-1016Phone: 410-955-5994Fax: 410-614-8136 Email, fax, or drop off your completed form at the appropriate address/fax number listed below. Note: Medical records are faxed only to other health care providers or facilities for continued medical care. Please fax, mail, or submit the medical notification form directly to the Medical Records Office. The form must be filled out and dated. Johns Hopkins All Children's Hospital Attn: ReleaseDepartment #6500002401P.O. Box 31020St. Petersburg, FL 33731-8920 Fax: 727-767-8312 If you have any additional questions, please call 727-767-7048. Please fax, mail, or submit the medical notification form directly to the Medical Records Office. The form must be filled out and dated. JHCP Medical Records Health Information Management 3910 Keswick RdSuite N1400 Baltimore, MD 21211Fax: 443-997-1357 If you have any questions about how to request records of patients, please call 443-997-1355. Please fax, mail, or submit the medical notification form directly to the Medical Records Office. The form must be filled out and dated. Johns Hopkins Home Care Group Patient Information Center 5901 Holabard Avenue, Suite A Baltimore, MD 21224Phone: 410-288-8000 Fax: 41. In some states, 0-367-3249Jhncg_release_of_information@lists.johnstons.edu, applicable laws generally can process requests for copies of medical records between 21 and 30 days, but usually do not take much time. Copy requests related to direct patient care, such as scheduled doctor appointments, take precedence. If you need to record an appointment, enter the expected date for the request. Medical records are faxed only to another health care provider or facility to continue medical care. In order to have it notification in advance, please ask for mail. If you are picking up a copy of your record, you will need the ID of the photo. Only the patient or the patient's representative can pick up a copy of the record unless indicated in writing by the patient or a representative of the patient. Requesting your medical record information through a third-party application You can now download your medical records information through a third-party application (app) of your choice by making a request for records through the app of your choice. Note that Johns Hopkins does not support or partner with certain third-party apps, but there are already several apps available to the public that have permission to connect to the Johns Hopkins Electronic Medical Déthe system. Choosing one of these apps will provide faster access to your medical records information. Regardless of the app you choose to access your medical records information, Johns Hopkins is not responsible for controlling the security or privacy of your information after it has been shared with the app. Before requesting to share your information, please review all the terms and privacy policies of the selected app. To request a correction (change) requesting a change to your medical records, download the request to correct my protected health information. Once you're done filling out the form, signing, and dinging, use your contact information to email, fax, or mail it.on the form. If you cannot download this form, call 410-955-6043. Johns Hopkins agencies are working to protect your privacy. For more information on how and when to share medical information allowed by law with others, see patient privacy notices. This notice is posted in accordance with the requirements of the Joint Committee and cannot be deleted. Johns Hopkins Hospital does not provide birth or death certificates.
