World best ringtone for android phone

Ringing tones are sounds made by your phone when there's an incoming call. Ringtones are available in many different sounds. Although your phone comes with several ringing tones, you can download additional ringing tones directly from your mobile phone service provider or from one of the many websites that offer ringing tones [source: Beck]. This requires that your phone be connected to the Internet via a wireless connection. There are different types of ringing tones, including: Your Phone's musical tone will play part of the song every time it rings. Voice tone You will hear a recorded voice when there is an incoming call. Sound tone You will hear the sound effect when the phone rings [source: ATT]. Here's how to get a ring tone offered by two of the most popular cell phone providers. Verizon Press on the Get It Now arrow, which also acts as the correct navigation arrow on your mobile phone. The Get It Now browser will open. Scroll down the list using the navigation arrow, until you see Get Songs & Tones.Press OK. Select 1. Get Dering Nadir and press OK. Select 1. Get a New App and press OK. Select True Tones and press OK. Select VZW Tones Deluxe to download the tone to your phone [source: Verizon]. &At T Go to AT&'s Home screen; T AppCenter and select Category.Select RingTones, Ringback Tones, Games, Apps.Select Ringtones.Filter to select the ringtones you want to download. Select Get it and enter the information you'll be asking for. Select Buy to download the ringing tone for your phone [source: ATT]. If you want to buy ring shade from an online store, just visit the online store and follow the instructions listed there. Almost every cell phone offers users the ability to customize their ringing tones by downloading their own ringing tones to the phone. Various ways exist to download ringing tones to your phone. One of the most popular ways is to simply send free ringing tones to your phone, which requires nothing more than your mobile phone number and ringing tone options. Naigasi to a website that offers free nadir ringing. Find the free ringtone you want to send to your phone. Browse shade by artists, albums and song titles. Click on the narring to select it. Enter your mobile number into the provided text box. Click Send. Open a text message on your phone. Click Download to download ring tones to your phone. Source: Joe Maring/Android Central There's a good chance your smartphone acts as a hub for everything that happens in your life. This is where save all your contacts, required pictures, important documents, and everything. Your phone allows you to easily access these things no matter where you are, but what if something happens to it? Whether you're breaking your phone or getting time for you to upgrade to the next best thing, here are some things you can do to back up your Android The app used in this source guide: Joe Maring/Android Central First first thing, let's talk about photos. They say the best camera is the one you have in your pocket, and for a lot of people, this causes your phone to be used to take pictures just about everything. From selfies to family portraits, chances are everything is captured and stored on your phone. With so many special moments living on your phone, it's important to keep them backed up to the cloud so they don't disappear forever. For this, we recommend Google Photos. Google Photos is 100% free to use and offers unlimited photo and video cloud backups. Once you download and install the app from the Play Store, providing it only takes a few taps. Open Google Photos. Sign in to your Google account. Select the quality settings you want. Wait for your photos to sync. Source: Android Central with the one done, Google Photos will take all the pictures and videos on your phone and keep them in the cloud on your Google account. If you have a lot of images on your phone and haven't set up Google Photos before, this can take some time — just be patient! Also, with Google Photos now set up, any additional pictures or videos you capture will be automatically backed up. While Google Photos is free to use, unlimited free picture backups are stored in what Google calls high quality. These are the lower resolution files of your photos, and while they'll still look good, won't be as sharp as the original file. If you want to back up your pictures in their full original resolution, this will count towards your Google One storage (more about it a little). For deeper diving to back up pictures with Google Photos, be sure to check out our guide. One place for all your pictures and videos. When it comes to cloud photo storage, no one does it better than Google Photos. The app is easy to use, all your memories are stored in the cloud for free, and it is easily accessible on all your devices. Source: Android Central Okay, so you have your pictures backed up, but what about all your other files? That's where Google Drive and Dropbox play. Both are cloud storage applications, which allow you to store all word documents, presentations, PDFs, and other file types that are safe and secure from your phone's local storage. Getting started with either application is quite simple. For Google Drive: Open Google Drive on your phone. Tap the + icon in the bottom right-hand corner. Tap Upload. Select the file you want to upload. Source: Android Central All Google Drive users get storage 15GB to be used continuously from the gate, but if you need more, you need to pay a monthly fee. Extra Drive storage is sold through Google One, with plans starting at $1.99/month for 100GB. There are a set of ratings on offer, including 200GB, 2TB, 10TB, 20TB, and also 30TB. If you do not want to use using Driving for whatever reason, we also recommend using Dropbox. After downloading Dropbox from the Play Store, setup is easy. Open the Dropbox app on your phone. Sign up for an account or sign in with Google. After logging in, tap the +icon. Source: Android Central You can use Dropbox for free, but you only get 2GB of storage for free compared to 15GB Drive free space. If you want to upgrade to a paid plan, Dropbox Plus costs $11.99/month and comes with 2TB of storage in addition to 30-day file recovery, Dropbox Smart Sync, and other features. Lots of free storage with flexible paid plans. Google Drive is one of our favorite cloud storage solutions. It is highly integrated to Android, equipped with a generous amount of free storage space, and has a wide range of paid options for any budget. If you want an alternative to Drive, Dropbox should also be checked. It has a great mobile and desktop app with great paid storage plans. Source: Joe Maring / Android Central If you're using a messaging app like Facebook Messenger or Telegram, accessing your messages on your new phone is as easy as logging into your account. However, if you still rely on good old SMS text messages, things are more complicated. You'll need to download the SMS backup app from the Play Store to save backups of all your texts and then on your new phone, download the backup so that all your conversations are restored. There are a number of applications you can download to do this, but the most we recommend is SMS Backup & Restore by SunTech Pty Ltd. It is a free download on the Play Store, and provided with it is pretty simple. Open Backup &Backup Restore SMS on your phone. Tap Get Started. Tap Set up a backup. Source: Android Central From here, you can backup not only text messages, but any phone call history you have as well. To take a deeper look at how these processors work, be sure to check out our guide. Speaking of that, if you use WhatsApp as your primary messaging app, there are separate processes you need to follow to back up your conversations. You can check out our guide on the subject here. New phone, same old text. For those of us who are still using old SMS texts, &Backups; SMS Restore is an important application. With just a few taps, you can back up all your text conversations and recover them quickly on other devices. Source: Joe Maring / Android Central On the relevant notes, something else you want to make sure backup is all your contacts. To we recommend that you use Google Contacts. Devices like Pixel 4a and Moto G Power come with installed Google Contacts, but if you have a phone from OnePlus, Samsung or LG, chances are you're using a contact app made by that manufacturer. If you already use Google Contacts on your current phone, you can download the app on your new phone, sign in to your account and all your contacts will be automatically synced. If you need to dig a little deeper, Google Contacts also offers tools to import, export and recover contact files. Open Google Contacts on your phone. Tap the menu button at the top left. Tap Settings. Source: Android Central Here, you can import .vcf files, export contacts from a Google account and restore the contacts you saved to your account. Source: Joe Maring/ Android Central Mobile right together, you'll also want to make sure all your apps are backed up. Backing up the app used to be a pain on the buttocks, but today, Google keeps automatic backups for you on your account. So download your app and all of their data is as simple as diving into settings on your existing phone, keeping toggle on and selecting backup options when you get your new device. On your current phone, doing so is as simple as the following: Open Settings on your phone. Tap System. Tap Backup. Source: Android Central On this page, you can turn on automatic backup on/off,

manually start a backup and view when a backup was last made for app data, device settings, and more. Again, we have an in-depth guide that goes into this topic in more detail to help you out. How to backup Samsung Phone Resources: Andrew Martonik /Android Central Finally, if you move to a Samsung phone, the Samsung Smart Switch app is worth checking out. This involves downloading the Smart Switch on your old and new phones, making connections between the two wirelessly or with a USB cable, and transferring all your data in one clean single. The Smart Switch can be used to transfer everything, including: Call history of Image Calendar Data Messages, media, and other files Getting Started with the Smart Switch on your old phone is pretty simple. After downloading the app from the Play Store, follow the prompts on the following screen. Open the Smart Switch on your old phone. Tap Agree. Tap Allow. Tap Let's Go. Source: Android Central Tap Cable or Wireless depends on the method you want to use. Source: Android Central One last time, we had a more detailed guide that runs you through every step of this process if you want a deeper dive into how it works. Easiest backup/restore tool for Samsung Mobile phones to a new Samsung phone? If so, the Smart Switch app is one of the best backup and recovery tools out there. After establishing a connection between your old and new device, all your data is transferred without having to mess with the cloud. Taking your phone anywhere can be tricky if you go for an extended period. Fortunately there are some great portable chargers to keep you ahead throughout the day. Keeping your phone installed during the journey is a constant pain, but a nice long USB cable can reduce some use hard-to-reach stores. Anker Cable is strong, and this six-foot example is a great travel companion. When you travel, you don't want anything to slow you down, so make sure you have a mobile battery back that charges your phone quickly. This 10000mAh Anker Pack supports 18W USB PD and it is very light. This is a very compact USB-C car charger that you can plunge in and forget there so you have to charge your phone at the highest speed. Isn't that useful?
