

I'm not robot

**Continue**

because as anyone who has used high-pass and low-pass filters knows, they can be incredibly powerful at shape a sound. Price: 209 euros / 259 dollars Description: high and low pass signal divider with independent effect loops for both filters. Controls: low pass filter frequency, level, phase reversal switch, Mix, high pass filter frequency, bypass /LP/HP I/O pedals: 1/4 inch input/output, HP send/return, LP Bypass send/return: 9V DC Free The Tone PA-1QG Image: Free The Tone + Programmable, with presets + separate pedals for preset selection – Expensive when a single EQ pedal costs more than some guitars – you're likely to have some tricks. The bands offered here range from 50Hz to 10kHz, with a lighted display so you know what's going on. Four presets can be recovered using the onboard pedal (and this includes level control, perfect for switching to a single of an 'always on' eq sound), while 99 are accessible with MIDI. And don't let digital appearance fool you: the signal path here is 100 percent analog, with digital circuits only used to control parameters. Price: 365 euros / \$380 Description: MIDI-controlled programmable EQUALization pedal with 10 bands and switchable presets Controls: Left/right cursor keys, parameter encoder wheel, instrument level selector/I/O line: 1/4 inch input/output, MIDI input/output: 'Holistic tonal solution' Bypass Power: 9V DC DC DC
