First aid kit definition in arabic

On the battlefield, the faster a wound can be treated, the greater the chance of recovery. According to retired Lieutenant Colonel Donald Parsons, better training coupled with excellent medical care can reduce the number of battlefield deaths by up to 15 to 20 percent. The day did not provide self-help and lay there and shouted Medic over, wrote Parsons in 2004. We must be able to assess our own wounds, provide self- or friendly assistance if necessary, and continue the mission if possible. Advertisement Since doctors are not always available - and self-help is not always possible - the army has launched the combat life-saving program. With medical training somewhere between the basic and combat doctor, these non-medical soldiers' second mission (after combat) is to provide life-saving assistance. This soldier is equipped with a Combat Lifesaver Bag, which is more extensive than ifak all soldiers carry. In addition to the IFAK basics, the ever-evolving Combat Lifesaver Bag (also known as medical equipment set) includes an expanded array: Bandages, bandages and adhesive tapeClotting agents, diazepam injection syringeThe wound trauma kit and chest wound dressingAtropine injection syringe, intravenous equipmentWater repellent warming blanket or survival blankets Scissors and railsEye shieldNasal trumpetAlcohol pads Read more, each soldier received detailed training on how to use life gearsaving contained in Combat Lifesaver Bag. The Army's policy used to be a combat lifeguard for a group of soldiers, said Maj. Kenneth Koyle. It has been decided - over the past few years - that this training is so beneficial that all soldiers now receive combat lifesaving training as part of [their] basic training... Now all soldiers are combat lifeguards. The 40-hour course is extensive. This includes care under fire, tactical care, controlling bleeding with and without tourniquet, opening and treating the airway, treating an open chest wound and possible collapsed lung, treating strain trauma and tactical movements of an injured soldier. Finally, the entire army combat physician kit is even more extensive and includes a stethoscope, suction kits with catheter, surgical sponges, traction devices, a pulse oximeter to measure oxygen saturation, hand-operated resuscitation, sodium chloride injections, respiratory toolkit and surgical drainage tubes. Would you like to know more about army first aid? Visit the links and resources on the next page. When buying something with links, we can earn money from our affiliate partners. find out more. Emergencies can and will not take place anytime and anywhere without warning in a business location. If you said an emergency requires a first aid kit, having a fully equipped kit that can handle minor injuries or illness is essential. As far as regulation is concerned, all industries must comply with the 29 CFR 1910.151, the work done by employees. This rule states that the appropriate first aid benefit must be readily available in the case of the 1910.151. However, the first aid programme must meet the hazards of the workplace. An office and a construction site are completely different, and the first aid protocol should take that into account. It is important to remember that the first aid kit is designed to take care of the injured person until emergency care arrives. This is when you need health care professionals. The key is that the best first aid kit for your business can handle an emergency. All first aid kits on the list are required by the Occupational Safety and Health Administration (OSHA) and/or the American National Standards Institute (ANSI). Rapid Care First Aid 3 Shelf All-Purpose First Aid Kit CabinetTop Pick: This Class A First Aid Kit OSHA/ANSI Z308.1 2015 is compatible. It has a full spectrum of first aid products that meet these standards. You can serve up to 200 people with more than 1,000 items in stock. This includes unified and colour-coded elements for easy identification, as well as a first aid booklet. Rapid Care First Aid 80098 3 Shelf All-Purpose First Aid Kit Cabinet, Class A+, exceeds OSHA/ANSI Z308.1 2015Buy for AmazonRapid Care First Aid 4 Shelf All-Purpose Extra Wide First Aid/Trauma CenterRunner Up: With 1,063 first aid and medical care in this kit you can be a provider for 250 people. The kit complies with ANSI 2015 Class B standards and OSHA guidelines. It comes with a tourniquet, blood plug, reusable rails, and trauma pads along with scissors, bandages and an assortment of medications. Rapid Care First Aid 865-15-1F 4 Shelf All-Purpose Extra Wide First Aid Cabinet/Trauma Center, ANSI 2015 Class B+ Buy by AmazonFirst Aid Only 50 First Aid Cabinet With DrugsBest Value: This Kit Exceeds 2015 ANSI Class A Requirements. You can treat 50 or more people if you take medications, bandages, masks, gloves and so on. The SmartTab e2Refill system comes with the FAO SafetyHub app, so you can monitor usage and inventory. When it runs out, the app will remind you that it's time to resuck the kit. First Aid Only 50 people with large plastic SmartCompliance First Aid Cabinet MedicationsBuy on AmazonXpress First Aid Only 195 Piece First Aid KitN not all OSHA or ANSI matching first aid kits should be large. This kit for first aid is only 10.75 x 3 x 11 inches and a little under a pound. But it's still OSHA compatible. This includes 195 basic first aid care to treat minor injuries for 50 people. First Aid Only 195 Pieces of First Aid Kit, OSHA CompliantBuy for AmazonXpress First Aid 250 Pieces of First Aid KitThis kit meets the ANSI A+, I&II standards and OSHA compliance. You will get 250 basic first aid care which is enough to treat 50 people. It features elements for wound care, burns and and medication in a storage case with a compartment for easy identification. Xpress First Aid 250 Pcs First Aid Kit, ANSI/OSHA CompliantBuy for AmazonBe Smart Get Prepared - 351 Piece First Aid Kitti is a comprehensive kit that meets and exceeds the OSHA ANSI/ISEA 2015 guidelines for 100 people. The case has tilted shelves that you can easily access the items in the box. You will find sterile eye wash, antibiotic ointment, burn cream, instant cold compresses, and first aid guides in English and Spanish on the kit. Be Smart Get Prepared - 351 Piece First Aid Kit - exceeds OSHA ANSI/ISEA standards 100 PeopleBuy on AmazonRapid Care First Aid 16 oz Eye Wash Station first aid kitTelThree industries that require an eye wash station. This kit is OSHA/ANSI and FDA compatible with eye washing, and it is also a 25-person first aid kit. The eye wash kit comes with a 16 oz bottle of sterile isotonic buffered solution. You can use it to rinse or water your eyes to clean dust, chemicals, and other foreign matter, as well as relieve itching and burning eyes and skin. Rapid Care First Aid, 16 oz Eye Wash Station First Aid Kit, OSHA/ANSI & FDA CompliantBuy by AmazonThings to consider emergencies and first aid KitAs for a business, should keep emergency practices regularly to keep workers safe. This involves going through a first aid kit to learn what is inside and how to use the tools. If you can have one or more employees get first aid certification, it will be much better. The goal is to be ready when there's an emergency, so they help each other. Expiration date: Regularly check your supplies for first aid to make sure they haven't expired. Expired medication can have unintended consequences. Nowadays, it's quite easy to set a reminder on your computer or app on your phone. Keep your kit in the same place all the time: There's nothing worse than not finding the kit when you need it most. Keep and replace the first aid kit in your business policy. Consider special stocks for your industry. Beyond the regular fist support kit, consider a special kit if there are dangers specifically for the industry. Reload used items: Some items are likely to run out before others do. So, be sure to check your supply regularly. First aid kit information guide: Make sure that the information guide in the first aid kit comes from a trusted source. In fact, go through it so you know what's in it. This makes it easier to take care of the stress of an emergency for the injured person. It is worth mentioning that the first aid kit is not a mobile trauma center. But a quality kit should be treated for minor traumatic injuries, burns, cuts, stings, shards, sprains, abrasions, and strains. You can also get some heavy duty kits suitable for EMTs. However, you should also remember to make a phone call away from medical emergency personnel. Staff, you are not, you should consider an extensive set to address more serious emergencies. ALSO READ ALSO: The best commercial hand dryersBest Office Wall Art3D printer for Your Businessimages: amazon.com Health care costs spiral out of control, and with doctor error now vying for the third leading cause of death in the United States, more people can turn to personal first aid kits as their primary line of defense if illness or accident strikes. Bootstrapping is one's own health care, also known as DIY health care, has received a big boost in recent years, thanks to the proliferation of new technologies that put medical-grade devices in patients' hands. The Tricorder of Star Trek is still the stuff of myth, and cloud-related professional-level products like Clever Medkit (pictured above) remain out of reach for regular consumers. Yet a new generation of gadgets are making their way into personal first aid kits and changing the ways home medicine is practiced. Let's survey the new first aid revolution quietly taking place in the reeds of bathroom mirrors and pantry cabinets around the world. Body temperaturePersessive case may be that diagnosis, not treatment, is the better part of what will be considered a first aid kit in the future. Traditionally, the sanitary thermometer was the only and most important means of diagnosis. These days are definitely behind us as we have a host of diagnostic tools entering the consumer wellness market and changing the way people diagnose themselves from home. Returning to the thermometer, it's worth thinking that modern technology has remade this handy tool to remain an important part of any serious first aid arsenal. As it turns out, some of the most powerful usage cases of the thermometer are now being revealed, thanks to big data, cloud computing and artificial intelligence. It will be a repetitive theme as it examines other gadgets that change the face of first aid. Many health thermometers are Bluetooth enabled and can generate continuous real-time metrics throughout the day. Then this huge data collection can be uploaded to remote servers and carried out through neural networks that can reconcile with correlations that would have gone unnoticed in earlier times. For example, a simple advantage of this type of connected thermometer usage is that women make it more easy to track their ovulation cycle. It has been known for some time that a woman's body temperature fluctuates with her ovulation cycle in a predictable way. Now, using connected thermometers, algorithms and smartphone apps, which was once a tedious process of tracking body temperature and predicting ovulation, it can be supplied relatively easily. As the algorithms improve, and the continue to grow, body temperature and Thermometer, can make a new and important role in anticipating things like stroke, heart attack, and seizures. The AliveCor Kardia ECG device can be seen attached to a smartphoneElectrocardiogramsThis logic applies to a number of connected sensors that find their way into first aid kits around the world. Some of the most exciting players in this game are taking diagnostic tools that were once the domain of doctor's offices and placing them in patients' hands. One of the most important can be the AliveCor Mobile EKG. An aging population base in places like Japan and the United States has meant that heart attacks are the thing more and more often. The time of diagnosis during a heart event often represents the difference between life and death. Thanks to the AliveCor Mobile ECG device, anyone can use their cell phone to diagnose a heart attack. Smaller than a credit card, the AliveCor Kardia is a cell phone attachment that allows clinical quality ECG measurements. These measurements are then evaluated by an algorithm within the accompanying app to detect signs of a heart attack. Dr. Eric Topol, one of the leading lights of future medicine, has successfully used the device on numerous occasions to diagnose passengers on airplanes who have experienced the symptoms of a heart attack. But best of all, this device does not require medical intervention or medical script to obtain it. With a sticker cost of \$100, it could well be the most underutilized piece of medical gadget available today and a future workhorse of first aid kits. Ear infections Built along similar lines of the Oto Cellscope. Almost everyone remembers a time in early childhood having their ears stared into by a well-meaning doctor, often to the tune of \$70 an hour. This type of diagnostic work already becomes the range of first aid kit. The company behind the ingenious Oto Cellscope allows family members to diagnose ear infections and the like with nothing more than a smartphone and a proprietary attachment lens. The accompanying app helps the user to use the smartphone to make a video of the inner ear, which is sent to the company for diagnosis within 2 hours. It is easy to imagine the time for further reduction of the diagnosis, since neural networks take over the process of analyzing images. We have already seen this for a smartphone app that independently diagnoses cancerous moles using images taken from the mobile phone camera. The Oto Cellscope is the lens attachment used to diagnose ear diseasesThe theme that quickly reveals the latest first aid gadget that your smartphone will be the indispensable focus of your home medical kit in the future. This is lucky, because even among the world's most disadvantaged communities, the smartphone is commonplace. Education on the use of applications and diagnostic attachments is likely to become a better part of first aid education in the coming years. Wound careIn the traditional model of the first aid kit, wound care was the primary priority. As mentioned above, this changes as the focus moves towards early diagnosis rather than treatment. Nevertheless, significant steps have been taken with technology that allows for better wound treatment. One of the most promising candidates in this area is vetigel, an injectable wound clinging solution. Many people have experienced serious injuries, and blood loss can be a life-threatening condition in the event of a severed artery. But thanks to a 17-year-old joe Landolina, inventor of VetGel, this new type of fast-sleeper is being used to seal traumatic wounds. This may be a real improvement in health outcomes when serious bleeding is involved. Currently only approved for use with animals, it may not be long before we see a similar version of VetGel released for human use. What's next? While we've covered a lot of ground toward constructing an image where first aid kits are moving, it wouldn't be complete without discussing the long-term prospects, including robotic home surgery. This may seem like a concept that is too far in the distant future, but don't underestimate the pace at which technology is moving. An obvious case may be that many people will live to see the day when robotic home surgery becomes a reality. Robotic faculty developed by Johns Hopkins University for semi-autonomous surgeryA piece of evidence such a future is glimpsed of the work currently being performed by Children's National Health System in Washington, D.C. and Johns Hopkins University in Baltimore, Maryland. Doctors there have created a robotic arm capable of semi-autonomous soft tissue surgery that holds up better than sutures performed by human surgeons. While currently being demoad on pork meat, it won't be long before such a device is in clinical trials for use with humans. One of the study's authors, Dr. Pete C.W. Kim, has already indicated that in a relatively short period of time we can see algorithms that perform simple surgeries, such as appendicitis, using next-generation robotic devices. If you ask the many of us who have experienced the unfortunate and real consequences of surgery spoiled by human hands, that day cannot come soon enough. We cover the medical technology of the future all week; Read the rest of medical Tech Week stories for more. And be sure to check out extremetech explains series with deeper coverage of today's hottest tech topics. Themes.
