VirusTotal api cost

With the current rise of digital threats, security can no longer be for granted. There is a pressing need to implement robust security tools to protect critical IT infrastructure from unauthorized access. A wide range of tools are available out there that you can use to prevent your critical assets from exploiting by hackers. Like all IT infrastructure, the API infrastructure must also be secure. Our API Security article provides a bird's eye view of this topic. In addition, the good news is that some of the security tools have exposed their application programming interfaces (APIs) to allow developers to integrate their features into applications and avoid the hassle of building security applications from scratch. To help you easily identify the right API to use, we reviewed several security APIs based on the following three main criteria: API Features: We've evaluated the features that make each of the APIs useful for integrating security capabilities into your applications. Pricing: We evaluate the cost of embedding each of the APIs in your applications. Ease of use: We discuss the ease of adding each of the APIs to your applications. Ultimately, we've created the following list of the top 10 security APIs: Top 10 Best Security APIs TL;DR: Here's a table that provides a summary of our top findings: API API Features Pricing Ease of Use Twilio API Integrate two-factor authentication or passwordless login, push notifications, time-based passwords paid price Easy Price VirusTotal API Send and scan suspicious files and by P2S Pentest Services Perform website security pen testing Free and paid code testing at \$30 per month Easy Antivirus API Protect your resources against viruses, malware and other threats Free and paid plan at \$49.99 per month Easy AlienVault API Integrate different security capabilities, including asset discovery, intrusion detection, and vulnerability assessment Free Easy BIN Lookup API Evaluate the validity of BIN and IIN numbers and prevent fraud Easy Hackers Easy Password Password API Identify if a password is known by hackers Free Easy Certly API Add threat intelligence capabilities to your Free Easy Sscreen API application To improve application protection, threat discovery and Security Monitoring Free Easy 1. Twilio API Twilio is a popular platform that provides developers with a wide range of tools to integrate communication capabilities into applications. In addition to its other Twilio also offers the Authy API, which helps developers protect users and test their applications in the future. API Features: The Twilio Authy API includes a wide range of authentication options that allow you to improve the security of your web, desktop, and mobile applications. With the API, you can two-factor authentication or password-free sign-in in the application. This way, you can improve the security of your users' accounts and avoid allowing the wrong people to sign in. The Authentication API also allows you to improve the user experience with push notifications that alert users each time an authentication attempt occurs. You can also take advantage of the API's unique time-based password (TOTP) to achieve greater security for your applications. Pricing: The Twilio Authy API offers a simple pay-as-you-go price that allows you to pay only for the right authentications. For example, push authentications are charged at \$0.09 per authentication. Ease of use: Twilio has complete documentation in different programming languages to help you get the most out of the API. There is also a vibrant community that can help you with any integration challenge. 2. VirusTotal API VirusTotal is an online platform that accumulates various antivirus products and other services to assist users in scanning files and URLs for malware. API Features: The VirusTotal API provides you with programmatic access to the platform so you can automate some of its features. With the API, you can send and scan suspicious files and URLs, check the results of the completed scan, and comment on submitted documents. Pricing: The API is provided for free. However, it should not be used in commercial services or products. Ease of use: VirusTotal provides easy-to-follow documentation that is full of examples on how to seamlessly integrate the API. 3. Google Safe Browsing API Google Safe Browsing is a service that blacklists URLs that Google has detected that are not safe for browsing. Some examples of web resources that Google may blacklist websites that contain malware or phishing content, websites that host unwanted software, and websites that engage in deceptive activities. API Features: With Google's Secure Browsing API, you can identify suspicious websites and warn users accordingly. In addition, you can use the API to prevent users from copying links from infected web pages and being distributed over the web. Pricing: The API is offered for free. Ease of use: As with any other Google api service, the Secure Browsing API is properly documented, allowing you to integrate it without any hassle. 4. P2S Pentest Services Test API The P2S Pentest Services Test API is an API that you can use to perform website security pen testing. API Features: With the P2S Pentest Services, can analyze web resources and detect the presence of security vulnerabilities. In this way, you can identify weaknesses on websites and allow users to remain safe online. Pricing: As long as you make fewer than 5 requests per day, you can use the API for free. The paid version is priced at \$30 per month and allows you to make 30 requests per day and also run multi-scan. Ease of use: There are to help you get up and running with the API in minutes. 5. Antivirus API The Cloudmersive Antivirus API is a simple API that allows you to protect your resources against viruses, malware and other threats. API Features: With Cloudmersive Antivirus Virus Scanning API, you can scan, detect, and remove viruses and other malicious software that can cause damage to your IT infrastructure. Provides an easy-to-use solution to scan files and content for dangerous infections. Pricing: You can make 100,000 requests per month using the API for free. The paid plan is priced at \$49.99 and allows you to make 250,000 applications per month. Ease of use: Simple documentation is available to help you integrate the API quickly and effortlessly. 6. AlienVault ALIENVault API is a platform that consolidates all important security tools under one roof and amalgamates them with the latest threat intelligence reports in real time. API Features: The AlienVault API allows you to get platform features and integrate security capabilities into your application. The API includes features to simplify the security of on-premises, cloud, or hybrid applications. You can use the API to integrate a wide range of security capabilities, including asset discovery, intrusion detection, log management, and vulnerability assessment. Pricing: The API is provided for free. Ease of use: AlienVault maintains detailed documentation to help you embed the API in a few minutes. 7. BIN Search API The bin search API is suitable for applying security when making payments. It's the API you need for payment analysis and fraud protection. API Features: The API allows you to evaluate the validity of bin (Bank Identification Number) or IIN (Issuer Identification Number) numbers. The API database is complete, updated frequently each time new cards are issued, and covers all countries. You can also use the API to perform IP geolocation and IP block list checks Pricing: You can make up to 5 calls per day for free using the bin search API. For more widespread use, you'll need to contact your API provider for specific pricing. Ease of use: Easy-to-follow documentation is available to help you implement the API to process and analyze BIN and IIN numbers. 8. Hackers Password Checker API The Hackers Password Checker API examines whether a password is already known to hackers, as the name suggests. API Features: The Password Checker Hacker API allows you to display passwords that are being used by notify their users accordingly. The API obtains data from the Nucleon Threat Intelligence Service database, which collects and analyzes passwords for up-to-date hacker attacks on computers and applications around the world. For identified passwords of capable hackers, the API also returns a score, which classifies each password according to its to be used for hacking attacks. Pricing: The API is provided for free. Ease of use: The API is very easy to use. Simply provide a password as a parameter and you will get a JSON response that specifies whether the password was found or not. Certly API Certly develops a wide range of tools to maintain the security and trust of modern web applications. API Features: With the Certly API, you can add threat intelligence capabilities to your web applications. For example, you can use the API to parse URLs from user-generated content and detect anomalies that might affect application security. Pricing: The API is offered for free. Ease of use: Simple documentation is available to help you deploy the API quickly and effortlessly. 10. Sscreen API Sscreen is a company that provides a wide range of security tools to improve application protection, threat discovery, and security monitoring. API Features: With the Sscreen API, you can leverage the extensive Sscreen database and discover the security risks present in your data. For example, you can use the API to evaluate the validity of an email address, confirm the authenticity of an IP address, or get a blacklisted list of IP addresses. Pricing: The API is available for free. Ease of use: Sscreen maintains extensive documentation to help you experience minimal issues in API integration. That's Rakuten RapidAPI's list of the top 10 security APIs. We hope you find an API that you can integrate into your application and solidify the security of your applications. About Rakuten RapidAPI Rakuten RapidAPI is the world's largest API market with over 8,000 third-party APIs and used by more than 500,000 active developers. We enable developers to build transformative applications through the power of APIs. Find, test and connect to all the APIs you need in one place! Check out some of the world's best APIs, including Microsoft, Sendgrid, Crunchbase and Skyscanner. Facebook LinkedIn ? Twitter Twitter
