## Wifi power save mode samsung

Is there a way to turn off Wi-Fi power saving mode on Android, i.e. always turn on wi-fi radio? I want a stable wi-fi connection, low latency, and a slightly less battery life than a peeling wi-fi connection and longer battery life. In other words, I want to turn on continuous operation mode for my wi-fi. EDIT: To clarify, I'm talking about the millisecond scale energy saving mode that's part of the wi-fi standard. This is where the radio wakes up on every beacon, not the energy-saving minute time, where wi-fi is completely disabled. If you want to disable it again just follow the instructions below. Edit: Forgot to mention this is a reminder in case your wi-fi is stuck (you see you are connected to your network but do not receive data) 1. Go to dialer 2. Dial \*#0011#3. When you see the ServiceMode screen, press the left menu button 4. Choose WiFi 5. See that Wifi Power Save Mode button that is ON - also turn it OFF 6. Exit this menu, turn off your Wifi and turn it back on. If you entered all your wifi login information, forget your network information (delete it) and re-enter it. 11-16-2012 07:43 PM Like 0 What's the advantage of this feature? 11-19-2012 02:37 PM Like 0 Ditto. I just turned it off because... I can. Why would I do that? What are are\_\_\_\_\_? S3 on Sprint - 16gb blue gravel + 64 11-20-2012 03:20 Am Like 0 Ditto. I just turned it off because... I can. Why would I do that? What are are\_\_\_\_\_? S3 on Sprint - 16gb blue gravel + 64 It's only for your WiFi problem. There have been some cases where people show up to be connected to WiFi but they can't access the Internet. You do this and you will be able to access it again. It could have been fixed in JB. Not sure though sent from my Sprint S3 using the forum AC 11-20-2012 09:39 AM Like 0 Fyi I went to turn it back on and it seemed to turn itself back on when restarting. S3 on Sprint - 16gb blue gravel + 64 11-20-2012 07:45 Like 0 Hello, I was wondering how to S3 Power Save Mode working? When it tries to turn off wifi? Is psm mode IEEE 802.11? Thank you 12-19-2012 01:01 PM PM 0 for people with heat problems. what's the advantage of this feature? 02-14-2013 04:04 PM Like 0 Fyi I turned it back on and it seemed to turn itself back on when restarted. S3 on Sprint - 16gb blue gravel + 64 it was doing it on earlier Android versions as well. 02-16-2013 10:13 Am Like 0 If you want to disable it again just follow the instructions below. Edit: Forgot to mention this is a reminder in case your wi-fi is stuck (you see you are connected to your network but do not receive data) 1. Go to dialer 2. Dial \*#0011#3. When you see the ServiceMode screen, press the left menu button 4. Choose WiFi 5. See that Wifi Power Save Mode button that is ON - also turn it OFF 6. Exit this menu, turn off your Wifi and turn it back on. If you entered all your wifi login information, forget your network information (delete it) and re-enter it. Don't do it unless you have to do it for some reason (that's unless your WiFi is stuck). If you turn off WiFi Power Saving Mode, your battery will be exhausted like crazy. I tried that after upgrading from Jelly Bean 4.1.1 to Jelly Bean 4.1.2 and I ended up with a battery that was drained 3-4 times faster than normal. 02-25-2013 08:37 AM Like 0 actually I did it it seems to use less energy. Don't do it unless you have to do it for some reason (that's unless your WiFi is stuck). If you turn off WiFi Power Saving Mode, your battery will be exhausted like crazy. I tried that after upgrading from Jelly Bean 4.1.1 to Jelly Bean 4.1.2 and I ended up with a battery that was drained 3-4 times faster than normal. 02-25-2013 09:02 AM Like 0 If you turn on wifi energy saving mode, your wifi internet connection speed will be very slow. Like in my case, I have a 15 mbps internet plan but use the speedtest.net app on my phone at a speed of just 1.5mbps. But after turning off wifi energy saving mode, I get a 15mbps connection. My question is, is there a way to permanently turn off powersave wifi mode? It's really annoying I always need to do \*#0011 # On! I think it automatically turns on when you get a low battery or if you restart your phone. ----- 360 Virtual Tourist - 360 Virtual Tours, Panoramic Photography, Landscapes, Video 03-25-2013 02:06 AM Like 0 That's odd. I just ran four tests, two with PSM off, then two with PSM on, and got basically identical results using Speedtest. Have you run your test with a low battery? Perhaps the powersave mode kicks while the battery reaches a certain level. Unfortunately, I'm not aware of any way to change the settings permanently. 03-25-2013 12:51 PM Like 0 I have the subway and I'm having the same problem. When I put in #0011 # nothing comes up. You can help me out. 06-08-2013 09:38 AM Like 0 Addition, I'm new to roots and roms. I said on a post that I need a rom based on touchwiz. Which is the best rom to use? I've bricked one of my pervious phones. I have galaxy 3 plus I'm trying to turn off wifi energy saving mode but nothing happens when I put \*#0011 #. Thanks for the help! 06-08-2013 10:28Am Like 0 Also, I'm new to the rooting and roms. I said on a post that I need a rom based on touchwiz. Which is the best rom to use? I've bricked one of my pervious phones. I have galaxy 3 plus I'm trying to turn off wifi energy saving mode but nothing happens when I put \*#0011 #. Thanks for the help! There are tons of good ROMS that you can choose from. Wicked Sensations, MOAR, Goodness Reborn, Hyperdrive are just few names. The ones I named TW based. There are also some good AOSP's that are out there. You don't have to use TW based ROM. JUST MAKE SURE YOU CHOOSE A ROM FOR SPRINT GS3. sent from my GS3 run Wicked 06-08-2013 11:51 Like 0 This code is usually carrier specific. As for roots, I'm not at all familiar with Metro. Make sure you do a nandroid backup first, so you can restore it have any glitches. 06-09-2013 09:58 PM Like 0 Hi. I tried this when trying to solve my wifi problem and now I saw a large battery drain - although since then I have turned off the power back. Is it possible to improve my battery performance again? Any advice will be greatly appreciated.. 06-21-2013 12:23 PM Like 0 0 There are a lot of battery themes here. If you search for them, you'll notice three screenshots that we usually ask people to post as a starting point. Without some idea of what your battery is actually using, we can't really offer any advice. I would also suggest starting a new topic specific to your problem, or posting in one of the existing battery life topics, rather than in one about a different topic. 06-21-2013 12:54 PM Like 0 Time to sme in... There's the same problem. Was connected and had internet access last night on the phone and now, nothing. I'm connected, but internet access is 0. Tried to go into service mode using code \*#0011 # and I received nothing. I'm running CM 10.1.2 ... lemme know if you need any more information for a better diagnosis 07-24-2013 11:03 Like 0 Hey have sister. Do you have a Sprint phone? That code is probably Sprint specific. It's also possible that CM is keeping it from working, I guess, but I've never used CM so couldn't do more than guess about that. Do you have other devices that can connect to the same Wi-Fi hotspot? Do they work normally? If not, try re-setting the router/access point. In fact, you can try this even if other devices can connect. It doesn't seem to make sense, but I've read the article here, where it's true and a fixed re-setup it. If that doesn't do it, try removing that WiFi entry from your phone and re-creating it. 07-24-2013 06:27 PM Like 0 Have you found a way to permanently turn off powersave wifi mode? Thank. If you turn on wifi power saving mode your wifi connection speed will be very slow. Like in my case, I have a 15 mbps internet plan but use the speedtest.net app on my phone at a speed of just 1.5mbps. But after turning off wifi energy saving mode, I get a 15mbps connection. My question is, is there a way to permanently turn off powersave wifi mode? It's really annoying I always need to do \*#0011 #everyday! I think it automatically turns on when you get a low battery or if you restart your phone. ----- 360 Virtual Tourist - 360 Virtual Tours, Panoramic Photography, Timelapse Videos 10-22-2013 12:39 PM Like 0 No I have 'nt and I'm very desperate to know how to turn it off permanently. It really sucks to turn it off daily. 10-22-2013 09:29 PM Like 0 0 When you're in the wifi screen to connect to a network click the menu button go to advanced and change sleep mode to never send from my SPH-L710 using AC Mobile App Forum 10-24-2013 08:41 Like 0 I tried that before. My wifi setting is Always on while I sleep. Wifi powersave mode always kicks while the battery is as low as 10-15% I think. Also if you restart the phone, it will turn back on. 10-24-2013 09:09 PM Like 0 I'm having the same problem but my service is not on so I can't dial. Is there a way to turn it off without service? 06-14-2014 10:00 AM Like 0 0
