A good brush will make painting a wall much easier. In fact, a good brush allows you to cut in around the edges without taping! This post contains affiliate links. By purchasing an item through an affiliate link, I earn a small commission at no additional cost for I have painted a lot of walls in my mine When we bought our first house, we skied on brushes and it always showed in my cutting in. But at the same time, I hated taping it all off. It took so long and it felt like such a waste. Then I bought the best paintbrush ever. The heavens were opened and angels sang. Not really, but I was able to get straight lines around the trim. And I don't even have a steady hand. Purdy's doing the best, but I'm buying Wooster in a pickle. Soft Brush quality brushes Quality has soft bristles. This means that you can paint without leaving brush marks. It also means that the brush is flexible and works with you. This makes cutting in so much easier than when you are struggling with the brush. 2 Brush 2 brush is the perfect size. Larger sizes are harder to work with and harder to fit in a liter of paint. Smaller brushes do not cover enough surface area. I find that 2 brush is the perfect size. Angled Edge The angled edge really makes the biggest difference! The brush works with you when you slide towards trim. If you tried to use a straight edge brush the same way, you would struggle to make it slide. Short handles Short handles are my favorite because my hands are small. But they also help you get into crowded places. Have you ever painted behind a toilet? This brush is barely bigger than my hand, so it lets me get in the smallest spots. It also means it's more comfortable to hold, so I'll do a better job around the edges. Cutting In FAQ's What is cutting in painting? Cutting in while painting involves painting around the edges, ceiling, corners, trim, cabinets and everything else that a roll would get paint on where you don't want it to. Cutting in is achieved by slowly being painted at an angle to the straight surface. Then you go back and paint to cover about 3 from the edge so that the roller does not hit the other surface. Cutting in is easiest if you use a cup. I love handy cup because it's easy to carry up and down a ladder. Plus, it's got a handle. When painting, is it better to cut in first? I prefer this scheme to get more difficult work out of the way. Since it takes longer to cut in, the paint is typically dry when I'm done, so I can immediately start rolling paint. You don't want to roll until the paint is dry because it will leave strange marks and possibly remove the color where it touches. Is it best to paint trim or walls first? I prefer to paint trim first before painting walls. My trim paint can be applied a little messier to the edges and then fixed when I paint over it while painting walls. I also find it easier to cut into walls than trim. But sometimes you paint your walls thinking your trim is great and realize that it looks shabby with that new layer of paint. This happened to me this past weekend. You can use tape You want to or just paint very slowly and be prepared to do some touch up.
