Whether you are in a cold climate with temperatures up to -20 degrees or a desert up to zone 9, you get an intense color. Red Sunset® is much more drought-resistant than other varieties, so it continues to look great without much watering. Basically, nothing can stop Red Sunset® to show its vivid shades. No matter where it grows, the red maple turns your landscape into the best courtyard in the block. Above all, since it grew and fed for months before shipping to our nursery, you get the best possible color in your landscape. Meticulous care means it's ready to thrive, long before it gets to your door. Order your Red Sunset ® Maple today! Planting & Healing 1. Planting: First, choose a full or partial solar location for your red sunset®. Any area with up to 6 hours of direct sunlight, some afternoon shade and well-drenate terrain is the best. Dig a hole deep enough to cover the root ball of your tree. After placing the shaft, dab the soil during filling to avoid air pockets in the area. Water your tree to fix the soil surrounding the roots and make sure it's planted several meters away from structures and power lines. 2. simply water your red sunset® maple during dry spells for the early years. In general, it will thrive only with precipitation. 3. Pruning: When you're ready to prune your tree, do it in late winter before its buds break. Prune dead or damaged branches back to the nearest healthy bud at any time of the year. Why is the red ® maple? Offering an exceptional red and orange color weeks before Variety, the Red Sunset® one of the best cartographers on the market. The deep and dazzling red hues of this tree can develop almost a month before other similar varieties, giving you a more durable autumn color. Red sunset ® rich, bright colors in which other maples can't. Whether you are in a cold climate with temperatures up to -20 degrees or a hot and dry desert up to zone 9, you get the promise of an intense color. The Red Sunset® is much more drought-resistant than other varieties, so it continues to look great despite little water. In addition, its strong branching easily resists strong winds and intense storms. Nothing can stop Red Sunset® to show its vivid range of bright shades. Planting: First, choose a full or partial solar location for your red sunset®. Any area with up to 6 hours of direct sunlight, some afternoon shade and well-drenate terrain is the best. Dig a hole deep enough to cover the root ball of your tree. After placing the shaft, dab the soil during filling to avoid air pockets in the area. Water your tree to fix the soil surrounding the roots and make sure it's planted several meters away from structures and power lines. 2. Watering: Simply water your red sunset® maple during dry spells for the first few years. In general, it will thrive only with precipitation. 3. Pruning: When you're ready to prune your tree, do it in late winter before its buds break. Prune dead or damaged branches back to the nearest healthy bud at any time of the year. Pot type plant package (with soil)Container measurement5.5 gallonsRecommitted for mass plantations Shadow creation CommitteeRecommitted for wind breaksCommitment for LandscapeRecommunal recommended for containersRecommended for topiaris If you want a with an absolutely amazing fall color, check out the Red Sunset maple tree (Acer rubrum 'Franksred'). This is a red maple to love all year round. In early spring, bright red flower buds appear on the branches before foliage appears. They will open in narrow clusters of red flowers. Following Follows flowers, the new leaves have a slight red overlap. The new growing leaves and twigs are also colored red before the shiny star-shaped leaves mature into a medium-dark green. This gives the tree a fresh and fresh summer look. But everyone knows that you plant a red sunset for the spectacular, super soon orange-red with bright red display in autumn. The Red Sunset is colored before most, and that incredible hard and hard color, giving you a wonderful backdrop for football watch parties. The Red Sunset Maple is well known as one of the best cultivars for its autumn color. When this plant was introduced, it became the most desirable maple and remains top notch today! When autumn comes, get ready for one of the most spectacular autumn displays you've ever witnessed. It has been described as the color of a glowing flame! Order this tree and get ready for a superior autumn display! You definitely deserve it. How to use the sunset red maple in the landscape This variety of red maple is an exceptional choice for any landscape. It is tall and strong with bright red colors in autumn for a long period of time. Red Sunset has become an access point for many landscape architects and landscape companies. Plant one as a focal point in your front yard or place one in view of a window where it can draw attention to the bright color of its long-fall display. Try planting an informal grouping of Red Sunset as an effective focal point at the back of your backyard. Better to use an odd number of trees in this case and create a natural group by planting along a sweet and meandering curve. You'll love looking at your trees from a comfortable lounge chair. It is recommended to plan ahead for night time fun. Run electricity to the grouping, so you can place the outer sies under the grouping. Place the lights so that they shine in the canopy. This tree is wonderful as a shadow tree in the front or courtyard. The well-balanced branched structure gives it a dignified look in your landscape year-round. Like all Maples, its roots love water. Use it in a rain garden to help catch water from runoff. Plant at least 50 feet away from the sewers and water supply. #ProPlantTips care young plants have a fantastic pyramidal shape, especially when they are young. As the plant matures, it will develop into a pleasantly rounded outline. These beautiful trees are hard too. Many municipalities regularly use them as street trees. The leaves of this maple are smaller than many other varieties of maple. The top surface dark of the leaves contrasts well with the silvery underside of the leaves. It is a fast-growing tree but still has stronger wood than other selections, tolerating the wind better. There are no significant diseases or insect problems with Red Sunset. it is relatively pest-free in most areas and becomes quite adaptable to most areas after it has settled. Plant Red Sunset Maple in in for uniform growth and a higher autumn color. They can tolerate the shade of the parts, but the autumn color will always be the best if grown in more sun. They enjoy a rich and slightly acidic soil that is uniformly moist and well-dreated, but once established this plant becomes tolerant even for the driest soils. Tall and strong with a bright color, Red Sunset Maple is an exceptional choice. Order today!
