War box office collection till now koimoi

AppKivi was developed using the power of Node.js and NW.js huge thanks to the Node community. I honestly love Geometry Dash: most things about the world. As a beginner it's a great introduction in the full version and each level is introductory to a new mechanic, plus the world aspect and changing forms are fun. The game is super addictive, but I have some complaints. First of all, the gameplay is very simple. After playing multiple times through each level with about 4-15 attempts, I started passing full levels until 2 attempts. It's great for the new person for the game, but not after a while. Secondly, advertising. The full version and subjeros both rarely or don't have this problem, but the world is packed with ads. I'm fine with small, video-like ads, but there are ads in the world that are huge and slapped at the top of the level. It's distracting, unwarranted, and covers the pause button, so you have to die again and again to pause it, which is ultimately about 20-26 attempts and has an ad in front of it. The only way to get rid of them is to pause enough levels to get dying, exit, and re-enter, and then try somelor other times. It's annoying, useless and distracting. Please get rid of them in any future updates. Don't get me wrong; I love the game as a whole with all its features and introductory purposes. But the problems I have mentioned are annoying and need fixing. Please read it and fix them! Thank you! Geometry Dash for PC is now available for PC Windows 10/8/7 or Mac. This is the best role for players to play rhythm based action games. It's the best running game on your Google Play-store but now it's not only for Android and smart phone users, you can also play it on desire devices.
