Although the original Dragon Ball Z cannot be run on Android, but through this game you can experience Fighter Z Graphics and gameplay on Android. This is a Dragon ball Tap battle game that I modeled by the Modders to look almost like an original Fighter Z game. This game has many features that made this game extremely addictive for new players. A lot of people want to play Dragon ball FighterZ on Android, so now here you have it. So let's know everything about this game. DBZ Tap Battle Fighter Z ModDBZ Tap Battle is an official Dragon Ball Z game with only 13 characters in its original version, but since I'm providing mod Apk this game has over 13 characters and even more new Super Dragon ball characters. This game was first released in March 2013 and is still in the most popular game among other Dragon Ball Android games. This game has many similarities to Fighterz listed below. DBZ Tap Battle and FighterZ: Similarities2D Graphics – Both games has 2D gameInfique fighting – The game of both games is very intense and full of combos, Instant Attacks and Firings.Models – The way textures look in both games are almost the same with a slight difference that DBZ Fighter Z is for PS4 and Tap Battle is for Android.Menu – Now a more Done bonus is that by downloading this mod you get a new selection of character menu under the game. This new menu looks almost 100% just like FighterZ.Same homepage – along with the character selection menu this game also has the same interface as Fighter Z.All Characters Unlocked – this is one of the amazing features of this mod. You don't have to unlock any characters, as they are all already this mod similarities are even more accurate now. DBZ FighterZ APK New Characters This mod contains a total of 28 FighterZ characters and here I'm explaining explaining the most amazing Characters of 28. Although all the characters are unique and impressive, but I'm listing only the new ones. Goku Blue – Goku has its Base, Super Saiyan and Super Saiyan Blue form in this mod. The texture is full original fighterZ, literally you can not find even a slight difference between the textures of this game and Z fighter. And the way he performs regular shooting explosions and Kamehameha are full combat port. Jiren – The entire jiren model is based on the original texture of the Wrestler Z. Actually, the screenshots you see above and the characters you see in them are all true FighterZ characters. DBZ Tap Battle has this feature to set up any Texture easily. Modder doesn't have to do Textures separately, they download them from the Internet. Jiren has a dramatic finish attack as his final move. Gohan – Although Gohan was already in this game, but only with his Super Saiyan form. Gohan now has the Super Saiyan 2 form with the perfect attack of Father Son Kamehame ha. You can see the screenshots above to see a look at his Attack.Beerus – this mod had Beerus with its original Z Fighter texture and the new hakai ball attack. Android 21 – Android 21 is also there in this mod with all the Frieza attack. Its texture is extremely perfect.
