Medbridge education reviews

can access their knowledge tracks in the app. It's a great resource at our fingertips, with so many options in one program. - Matthew Smith, PT, DPT, OCS, CMPT, Cert.MDT, CSMT, Chief Practice Officer, Rehab Agency Physiotherapy LLC I'm very happy with my MedBridge subscription. Being able to get all of my ATC Ceus in one place, especially the EBP course, relieved a lot of stress. - Charlotte Booth, BS, ATC, CSCS, Clinical Programming Director, M.O.G National FEATURE Sign in to the MedBridge app to access the following features while online: - Robust course catalog with more than 450 courses taught by world-class instructors in different specialties and disciplines - Interactive course content including videos, learning assessments and practice sessions. August 28, 2020 Version 1.9.5 Minor UI improvements. Bug fixes. MedBridge's website offers some of the best online CEU courses for speech pathologists by so many leaders in the field. Materials are provided in the best way to learn and retain attention. The app makes these CEU courses even more accessible and I love that I can easily stop/start the course to complete them as my time/schedule allows. I'm saddened that I didn't find this site many years ago! Very applicable to my practice as an OT! It really helped me reflect on my clinical reasoning and opened my mind to trying different assessment tools and approaches. It's amazing to be able to observe instructors working on patients, and not all online prescriptions offer this. The money was very well available.) The only thing I ask for is that I don't always have the internet and it's great to hear the course while traveling and be able to download the course in advance. These apps are really great in that it's so easy to watch chapters at once that you can participate in 15 minutes or the entire duration of the course. Reliable save my spot in every class I started, so even pausing for interruptions makes it easy for me to get back to where I was. The courses I took are of high quality and easy for instructors to listen to. Overall I was very impressed. Developer MedBridge Education LLC does not provide Apple with details about its privacy practices and handling of data. For more information, see the developer's privacy policy. Developers should provide privacy details the next time they submit an app update. Guidance of developer website app support privacy policy patient education and home exercise program (HEP) is of paramount importance to clinicians to obtain positive patient results and improve compliance. Recently, MedBridge Education deployed a patient care portal with HEP and patient education materials. I have had the opportunity to use this software for the past month or so and have divided my review into the following areas. 1,500 exercises (and growing) content This HEP is pretty much everything you need when it comes to prescribing a patient's home program. These are not just stick figures or awkwardly drawn models. Each exercise includes instructions on simple and modifiable techniques, exercise parameters, and an in-detail video demonstration. Each exercise program also has a detailed description and 3D video demonstration of the injuries and disabilities the patient is being treated for. Plus, if you can't find the exercise or obstacles you need, you can easily upload both to your system. Once the patient's program is created, they can print it out, email it, or visit the Patient Portal to view HEP and related videos. Ease of use MedBridge's patient portal is one of the most user-friendly HEPs I have come across. The search and search for body areas, exercise types, or specific exercise names makes it easy to find the right exercise. We all know that there can be countless names in the same exercise, and trying to find your exercise in most HEPs can cause serious problems. MedBridge's program actually provides the function of re-changing the name of the exercise so that you can keep things straight in your head, so it can be more efficient to look for exercises in the future. In addition, to create more efficient processes, you can create more common failure/injury templates that are displayed on a daily basis. Patient Feedback In my limited use of this program, I have only heard positive feedback. Most patients are used to receiving crude drawings with poorly described exercise techniques, and when they go home, all their practice is gone in no way. Since I implemented MedBridge's HEP, I've noticed improvements in patient compliance and exercise technology recalls. The only negative comment I've received from a few patients/clients is that the printed photo is pretty small and hard to see when printed in black and white. Obviously, they were able to go to the website to watch the relevant videos, but many patients don't want to take that extra step. Overall honestly, there are very few negative things I have to say about this software. It's intuitive, detailed, and a game changer on home exercise and patient education. The only negative thing I see is that I have to log into an online program to make a program, but this is a very minimal hassle for such beneficial components in the care of my patients. After using basic (almost) frustrating HEP in the past, my switch to MedBridge's patient portal has become seamless with a very minimal learning curve. After 15-20 minutes of playing with the program, I comfortably created, edited and sent the program to the client. What is the best part of this program? Currently, The Patient Portal is included in MedBridge's online continuing education product, so it's absolutely free for all therapists who already use this great resource. For those who have not yet subscribed, you can purchase a one-year subscription to continuing education, patient portals, and reference tools (orthopedic trial videos, manual therapy technique videos, and 3D models) for only \$200, which is a saving of \$225! For discounted rates, click here or check out MedBridge's website and use the promo code Ortho MANUALPT when you are ready to buy. This sale is good until 11.59pm EST on Sunday, August 10, so don't wait too long! read more. If you visit MedBridge's website, one of the first questions is, What's the difference between an education plan and a premium membership? Simply put, an education plan is perfect for those who simply want to learn and get Ceus. With a MedBridge subscription plan, you get unlimited continuing education. The MedBridge subscription plan provides all the ongoing education required for state and country licenses*, and MedBridge automatically submits the EOU that has completed your subscription to the appropriate board (if the license information for the profile is up-to-date). The education plan also provides access to MedBridge reference tools (described later in this article) and a practitioner app with access to CEU and educational materials. The premium plan offers the aforementioned unlimited courses and Ceus, but also includes patient engagement resources such as home.Access to program (HEP) builders, patient education materials, and your own patient mobile app. That's really the main difference: the resources facing patients. These details will be discussed in more detail later in this article. The majority of MedBridge subscribers plan to choose a premium plan to provide access to the resources facing these patients. Of course, our state board can't make it too easy for us to understand exactly what's important for certification. :-) Given the inherent confusion caused by each state having its own licensing regulations, the MedBridge platform makes things blindly simple. You can search for information for each course and quickly see if it counts toward Ceus for a specific occupation or condition. You can also filter the course catalog by status and discipline to quickly see which courses are certified. To make it even easier, enter your home state and discipline into your profile and MedBridge will coordinate the completion of all courses. It also creates a certificate with Ceus and license information that can be sent to the licensing authority. MedBridge also works with our national institutions, and the courses that count in their respective areas are: AOTA Certified AMA Approved - MedBridge also allows APA to be automatically updated with completed courses that APTA is a partner of, already noting certification courses. In addition to offering traditional online Ceus, MedBridge has expanded to include one or two live webinars per month. You can find the live webinar calendar here. These live webinars provide a platform for questioning and dialogue and meet licensing requirements in most states. However, each state's rules are different, so it's a good idea to look at the licensing requirements of individual states (or contact MedBridge) to address specific questions. The reference tools section has a short video (1-2 minutes) of orthopedic testing and manual therapy techniques. The technology is broken down into body areas. For example, there are about 60 videos in the hand/wrist orthopedic test category (from boise test to mishra test II). I happen to love MedBridge for its patient care resources. I believe that these patient tools are a big part of why MedBridge is such a robust choice for clinicians. The Patient Care section offers two services: customized exercise program Patient Education Handout/Video For each patient, you can create a unique patient care program with exercises, state-specific resources, and other patient education videos/handouts. Patients receive a unique access code via text or email and invite them to a patient portal accessible from home. You can also print handouts as follows: In 2017, MedBridgeThe GO app uses short videos to walk patients through their exercise programs. Here's an overview and best practices on how to take advantage of the MedBridge GO app and create a home exercise program. I created the following patient handouts in about 2 minutes. Handouts and videos feel modern and well designed. They are decades beyond some of the handouts I dug out of the old filing cabinet. In my opinion, MedBridge has the best Ceus available in terms of both quality and choice. The quality of the videos far outweighs the other services I've tried, and I know I'm definitely going to get something out of it when I sit down and dedicate time watching videos. This process was personally very meaningful as it helped give me the extra confidence I needed to launch my dream project of an online journal club for OTs. I always recommend that you make sure they have a course that directly affects your practice before joining the CEU platform. I love MedBridge, but it doesn't cover all topics. You may need to keep looking for if you are interested in very professional information. Also, if you want to cheat and complete Ceus as soon as possible, MedBridge is not for you. You really need to sit down and watch the video to pass the test! Not only will you save money today, but you will continue to do so down the road. I think you will love the platform and choose to update and MedBridge will come in really handy with the auto update option. When you start using promo codes, MedBridge automatically renews your membership at a discounted rate. This means that if you pay \$200 using a promo code, it will be renewed at \$200. However, if you skip the promo code, you can pay \$425 and it will be renewed at \$425. It is a very affordable, convenient and robust platform that allows you to win Ceus on the go without sacrificing quality. I will continue to subscribe to MedBridge indefinitely because it is the perfect solution for my CEU needs. If you decide it's the right option for your own needs, you can subscribe to it for \$200 (\$250 if you want all the features of the premium plan) using the promo code OTP13 at checkout. Please note that I am an affiliate of MedBridge and have an incentive to connect the right users with this service. However, this post was not sponsored or suggested by MedBridge. Description and it's my own. Let's start MedBridge today!
