Minecraft, one of the most popular video games in history, has served as a source of inspiration for many successors. One of them is Exploration for Android, a title where you can explore, build, and move freely through a three-dimensional world created with blocks. And the operation is not at all far from Mojang's original game. That is, here you can explore the whole world without any restrictions in any form, destroying blocks and building any structure no matter how crazy. yes, we're aware of that. We've been inspired by Minecraft. All the possibilities of Exploration Lite Medan that haven't been built are very boring, so build anything you can think of using the 99 different blocks you'll find in the game: from houses to castles, to mines, parks, and the whole city. Among the available elements, you can find all kinds of building materials, lamps, stairs, and plants to create a world that suits you. The stage is randomly generated and can also be changed: you can dig in the ground, cut stones, cut down trees ... but for that you will need a tool that you can craft in your own inventory because as in Mojang games you can create it from your own inventory. The only limitation you will find is your own imagination and your desires: build what you want. You know which Minecraft clones are kicking in, but based on size, performance and hardware demand, we're probably facing the best of it all. The only drawback, as some must have, is that the Lite version does not allow you to save the game, so when you leave you will lose all your progress. Progress.
