Start by identifying the type of ant in your house so you can figure out how to get rid of ants, their nesting habits and have a better idea of where they live (they may be nesting outside). Take a detailed photo of the namesae and send it to your local university extension service (enter your country name and university extension service into any online search engine). The extension service tells you the type of ant you are dealing with and where it nests. They can give you facts about the species ant and maybe some advice on how to get rid of this particular kind of ant. Sometimes the solution to the ant problem is to get rid of your nest. If you are dealing with carpentry ants that can do structural damage to your house, it is important that you smooth them out as soon as possible. Finding a nest doesn't have to be easy and requires detective work. Ants generally prefer moist areas such as framing or flooring that is soft and spongy from plumbing or roof leakage. How to get rid of ants begins by looking for areas with water damage. Attics, bathrooms and exterior walls are obvious candidates. Cut out small holes in the walls damaged by water to track down the nest ant. (You'll need to fix the walls as well.) When you find that nest, spray it with an insecticide that contains bifenthrin, permethrin or deltamethrin (look at the label). Ortho home defense Max is one brand. Be sure to repair the water leak and replace the damaged wood. If you can't track the nest, hire a pest control service. Professionals spend about 80 percent of their time hunting nests. Their fees start at about \$150, but severe cases with multiple treatments can cost \$400 or more. Image courtesy of Jeff Hahn, University of Minnesota

As you see ant, your first impulse is probably a step on it. But no. You're going to kill him, but for every hinge you see, there may be hundreds more hiding in the house. The ones you see are scout ants, foraging to make it back to the colony. Use these scouts to wipe out the entire colony. Prebait ants in Saw. Ants' tastes change over the course of a year. They usually prefer protein in spring and sweets or fatty/fatty foods in summer. Set out sugar or honey, fried food and peanut butter, then you'll see which food attracts ants. Use which food they prefer bait and DIY way to get rid of ants. Once you know what ants like, buy and fix a toxic ant bait that is aimed at their taste. Check out the bait pack for words like controls like sweet and grease eating ants. Stop ants from coming into the house using this 'outdoor ant bait (Amazon)' around your yard. 5/13

Where you see one ant, you are bound to see the other. That's because ants leave a fragrant trail followed by other ants. Sweeping or mopping is not enough to remove the scent. Instead, mix 1 part vinegar with 3 parts water in a spray bottle for a safe way to get rid of ants in the home, then spray wherever you've seen ants in the past. This stops the outdoor nesting ants that have entered the house on a foremsy for food (the ants that come inside are not necessarily trying to create a nest). Vinegar and water will not stop ants that are already nesting indoors. You're going to have to kill them with ant bait. 6/13 Family Handyman

Once you laid toxic ants bait, expect a lot of ants (initially). That's a good thing. This means that more ants are taking the bait (which is toxic) back to the colony, where they share it with the rest of the ants, including the queen, and kill them. There could be thousands of ants in the nest. Liquid bait is the best way to kill ants for many sweet-loving ants. Other ants prefer solid bait. If you still have ants in the house after two weeks, replace the bait

containers. If that doesn't work, getting rid of the ants further means finding a nest. 7/13 The HandymanAnthills family are eyesores in yards, and ants can destroy them outside of eating. If you only have ants in a certain area, like along the sidewalk, spot-treat the area with an external insecticide. Liquid or granules work well as a way to get rid of ants. For extensive ants problems on how to get rid of ants, use a lawn and garden insect killer that contains bifenthrin as the active ingredient. The spray will also kill other insects (read the label for the list). First, mow the grass. Then spray the insecticide on the entire lawn-you can also spray shrubs and trees. Spray in the early morning or late afternoon when the ants are most active. And it is best to spray on a quiet day to avoid drift. If the ants still build hills after six weeks, treat the lawn again (the insecticide works for up to six weeks). You won't kill every ant in your yard (not even you'd like!), but spraying will remove most of them and stop the pesky hills. Keep these pests away with these natural remedies. / 13 Family HandymanIf you often see ants in the same area on the tow, there's probably a nest there. How To Get rid of the ants to start looking for holes in the tows where the ants are crawling in and out. Holes are often placed between the bricks where the mortar fell out, under the lap pour or in the cracks in the staves. Once you find a nest or near a nest, spray the area with an insecticide containing bifenthrin. Standard insecticides are much less effective in killing fire-fighting ants. You need a special product that is designed to smooth out and best the walls to kill ants and these biting critters. Apply granules with a whisk of the broadcast. Fire ants carry granules that they think are food (it's actually poisonous bait) back up their hills. Ants share the bait and die. Some of these insecticides kill fire ants for up to a year. As with other baits, it may take several weeks for you to see the full results. 10/13 Family HandymanA clean house is your first defense against ants. Sweep food crumbs, wipe spills, throw away garbage and don't leave dirty dishes sitting around the house. It takes ants' food source. For a safe way to get rid of ants, spray vinegar mixed with water around a bowl of pet food to keep the ants from feasting there. 11/13 Family Handyman After disfiguring the house of ants, take steps to ensure they don't return. Seal and seal the holes, and then spray the insecticide around the doors and windows. Insecticide, which contains bifenthrin, permethrin or deltamethrin, is one way to get rid of ants. Spray a 4-inch-wide strip along the entry points, just enough to wet the surface. Once dry, the spray leaves an invisible film that repels the ants so they don't enter the house. Every spring, you spray the insecticide to season yourself in front of the ants. But keep in mind that it only works to keep ants out—it won't kill ants that are already inside, and it can actually interfere with the use of ant bait. Kill more than just ants with this multipurpose insect bait (Amazon), which is one of the best ant sprays. 12/13 Family HandymanIf you're still getting ants in your house after spraying internal entry points, spray a 12-inch-wide strip of ant insecticide on the foundations and on and under the first course of womb trawling to keep the ants from entering the house. An external insecticide that says barrier treatment on the label is one of the tools to get rid of ants. 13/13 The HandymanOnce family will kill the ants in your house and yard, take steps to ensure they don't come back. Trim back shrubs, shrubs and trees that brush against a tow or roof that provide a bridge for ants to get into your house. Remove these pests and find out how they gained input to stop future incursions. Keep 3-inch. up to 6-inch. free space between the soil around the foundation and the bottom row of towed to prevent ant ants nesting in the tows (and make sure the soil slopes from the house). Avoid stacking firewood next to the house. Firewood is an ideal refuge for ants. Ants like bare spots in the yard and they like to build nests under layers of boards. Maintaining a healthy lawn is one way to get rid of ants. If anthills pop up in bare areas, spray the hill with insecticide and plant grass in bare patches to get rid of the ants. Rake the lawn or bag of grass when mowing to remove the board. Each product is independently selected by our editors. If you buy something through our links, we can earn affiliate commissions. Originally published: July 03, 2019 Ant-Man | Marvel Even for hardcore fans, the Marvel Cinematic Universe can sometimes be a little hard to watch. Ant-Man and The Slipper is 20. If you're going into a new movie that missed one or both of them, or you're just hazy on the details, let's summarize everything you need to keep in mind about Scott Lang and his friends. In 2015, Ant-Man, we meet Scott when he's released from prison. He worked for a security company, but found out they were deliberately overcheduling his customers, so Scott hacked into their system and stole from the company's head to pay off the little boy. He's been caught, and that's why he's been locked up for years. When he gets out, Scott desperately wants to see his daughter more often; She is in the care of her ex-wife and her new fiance, and must prove that she can keep her job and pay child support. But Scott's trying to find a job because of his criminal record. His old cellmate, Luis, tells him about a rich old man sitting on a pile of money, but when Scott breaks into the house and bursts into the man's safety, all he finds is a motorcycle suit. At least he thinks so. Turns out this is a suit belonging to scientist Hank Pym, who developed extremely shrinking technology when he was working at the S.H.I.E.L.D. However, he resigned years ago when he discovered that the S.H.I.E.L.D. was trying to use its technology without his consent. He also found his own company, Pym Technologies, but has since been forced out of it. a man named Darren Cross took over with the help of Hank's estranged daughter, Hope. We find out that Hank intentionally brought Scott into his house hoping to break in and take the suit. That's because he discovered that Darren Cross developed a shrinking suit of his own called yellowjacket, and planned to sell it as a weapon. To stop him, Hank has to break into Pym Technologies headquarters to steal it, but he can't do it alone because he's too old and exposed to Pym. too many years. If you wonder why Hank's daughter, Hope, just can't do it herself, that's a good question. Although Hank and Hope have been estranged for years, she is now back on his side. But even though Hope insists she can break into headquarters herself, Hank is desperate to lose her. He reveals he lost his wife and Hope's mother Janet van Dyne on a mission decades ago. They were trying to defuse the missile, and the only way to do that was to go subatomar. Janet shrivelled to such a small size that she was able to enter the racket and ban her, but she couldn't stop herself from shrinking, and she became trapped in what Hank refers to as Quantum Realm. Quantum Empire in Ant-Man | Marvel Studios At the very end of the film, Scott is able to beat Darren Cross in the same way; He's going subatomar to destroy Cross's suit. However, like Janet, he continues to shrink and enters Quantum Realm, where he will probably be stuck forever. Fortunately, though, Scott discovers his way out by getting one of Pym's particle discs into his controller. It goes back to its normal size, and everything is fine and good. In the post-credits scene, Hank decides he's finally ready for his daughter to become Slipper, and he reveals the new suit was a development for hope. The next time we saw Scott was in Captain America: Civil War. In this film, the Avengers argue about the Socovioa Accords, a new piece of legislation that regulates superheroes and places some severe restrictions on them. Tony Stark believes this is necessary given all the collateral damage they've caused over the years (including Socovioa, hence the name), while Steve Rogers believes it will prevent them from saving lives. Steve Rogers and the gang need more people on their side to battle Tony Stark, so Sam Wilson ends up recruiting Scott Lang, who he met during the original Ant-Man in a scene where Scott breaks into the Avengers establishment to steal a piece of tech. Scott seems pretty confused about what's going on, but he's finally fighting for Captain America's side during the airport battle. The key moment in this battle comes when Scott is able to turn a giant, something he says he only tested in the lab once (and he fainted). Seeing this work perfectly makes Scott laugh with joy when he becomes 65ft tall, although Spider-Man and Iron Man eventually push him. By the end of the battle, Scott is exhausted, and asks if anyone has any slices of orange. Captain America: Civil War | Marvel Studios By the end of the film, those who fought for Captain America, including Scott Lang, will end up in prison, but Steve breaks out them in the last scene. This brings us to Ant-Man and Slipper, who picks up two years later and recounts the aftermath of Scott's actions in the Civil War. In the event that the The battle, by the way, took place in Germany, so whenever a figure in Ant-Man and Slipper references the events of Germany, that's what they say. With that, you're pretty much caught up. The most important two things to remember before watching a new movie is that Scott Lang broke the law by helping Captain America in the Civil War, and that in the original film, Scott proved that man can return from Quantum Realm, where Hank's wife disappeared years earlier.
