App Screens Permissions requires the following permissions on your android device. approximate location (network-based) Gives the app your approximate location. This location is derived from location services using network location sources such as cell towers and Wi-Fi. These location services must be on and available to your device for your app to use them. Apps can use this to determine your location. precise location (GPS and network-based) Allows your app to get your exact location using gps (Global Positioning System) or network location sources such as cell towers and Wi-Fi. These location services must be on and available to your device for your app to use them. Apps can use this to determine your location, and can consume additional battery power. viewing network connections Enables the app to view information about network connections such as which networks are available and connected. view Wi-Fi connections Allows the app to view information about Wi-Fi networks, such as whether Wi-Fi is turned on and names of connected Wi-Fi devices. pairing with Bluetooth devices Enables the app to view the Bluetooth configuration on your phone, and to make and accept connections with paired devices. access to Bluetooth settings Allows the app to configure your local Bluetooth phone, and to detect and pair with remote devices. taking pictures and videos Allows the app to take pictures and videos with the camera. This permission allows the app to use the camera at any time without your confirmation. connecting and disconnecting Wi-Fi Allows the app to connect to and disconnect Wi-Fi access points and make changes to your Wi-Fi network device configuration. Control Flashlight Allows the app to control the flashlight. GET accounts Allow access to the list of accounts in Accounts Service. find accounts on your device Allows the app to get the list of accounts known by your phone. This can include any accounts created by applications that you have installed. download ing apps that are running Allows the app to retrieve information about tasks that are currently running and running recently. This can allow the app to detect information about the applications used on your device. full network access Allows the app to create network sockets and use custom network protocols. The browser and other applications provide means of sending data to the internet, so this permission is not required to send data to the internet. Access SD Card filesystem Enables the app to mount and unmount filesystems for removable storage. control Near Field Communication Enables the app to communicate with Near Field Communication (NFC) tags, cards, and readers. read your contacts Allows the app to read data about your contacts stored on your phone, including how often you've called, emailed, or communicated in other ways with specific individuals. With the permissions, apps can save your contact data and malicious apps can share contact data contact data your skills. read the contents of your SD card Allows the app to read the contents of your SD card. readerphone state Allows read-only access to phone permissions, including the phone number of the device, current cellular network information, the status of any ongoing calls, and a list of any PhoneAccounts registered on the device. run at startup Make the app booted itself as soon as the system has finished starting. This can make it take longer to launch the phone and allow the app to slow down the total phone by always running. control vibrations Allow the app to control the vibrator. preventing your phone from sleeping Makes the app prevent the phone from going to sleep. changing your contacts Allows the app to change data about your contacts stored on your phone, including how often you've called, emailed, or communicated in other ways with specific contacts. This permission allows the app to use the camera to delete contact data. modifying or deleting the contents of your SD card Allows the app to write to the SD card. changing system settings Allows the app to change the system's settings data. Malicious apps can damage your system configuration. setting an alarm Causes the app to set an alarm in an installed alarm clock app. Some alarm clock apps may not implement this feature. receiving data from the Internet Allows apps to accept clouds to device messages sent by the app's service. If you use this service, data usage will be brought about. Malicious apps can cause excess data usage. Use.
