The business model canvas contains nine blocks: fill each one with labels, links, hand drawings, images, and videos. Collaborate with your team to find the best way to explain and visualize your business. About Business Model Canvas TemplateWy's Business Model Canvas (BMC)? The Canvas business model is a strategic tool used to visually develop or display a business model. BMC helps identify and reconcile key types of businesses and their relation to your value proposiment. How to create a business model canvas: 9 ElementsPolata provides you with nine key business elements to illustrate, summarize, and track. The 9 building blocks of BCM are:1. Key Partners Rename Rename partnerships that your business uses or relies on success. Include the resources or value your business receives from these partnerships.2 Key areas of activitySummarize key areas of activity that allow your business to provide services and provide your value proposition. 3. Key ResourcesSpern the key resources that your business relies on or relies on for work and service delivery.4 Key offersSummarize various value proposiments that distinguish your business from your competition.5 Customer relationshipsDefin and describe the basic relationships you have with customers, including how you interact with it, how these interactions differ between different types of customers, what customer needs there are, and the level of support that different customers receive.6 ChannelsDetail how your customers are achieved, how your services are provided, your various distribution channels and how your value proposition is delivered. 7. Customer segmentsDiscover ideal customers because your value proposition is for gain, and then describe the key differences between these segments and potential steps in the customer journey.8 Cost structureDeer the basic costs associated with your business's operations and the provision of your services, and then details the relationship between these costs and other business functions.9 Revenue streamsPerform how your business generates revenue through the delivery of your value proposient. When creating and using a business model canvas? Business model canvases are not designed for service activities instead of a business plan. Instead, the BMC is used to summarize and visually illustrate the most important information of the business model and provide centralized current clarity. This canvas is suitable for illustrating existing business models, whether it's new business or not. BMC is also suitable for visualizing new business models for startups, as it helps organize and combine ideas around your key features. Keep in mind that canvas business models should be viewed periodically because all of the factors listed may change over time.5 benefits of using the Business Model Canvas1. Provides a structure for the ideaModel business Canvas is extremely useful in structuring your business model visually. This helps at different stages of determining your business model. It's easier for many to visualize the business model in one simplified view.2 Focuses you on your value proposibility to distract from all the various factors involved in doing business. The value proposition is at the heart of the entire Canvas business model, so you can constantly focus on the reason for your business. You should use your value propositus as a guiding star to give you direction when you fill in all the other parts of the canvas. 3. Is it quick to complete who or not your the model is clearly defined or you are testing different business models, BMC can be completed quickly and will help you generate new business ideas. This enables faster feedback, faster idea, and faster iteration.4 Provides a holistic look at your businessFill canvas business model you can see how all elements of your business are interconnected and inform or affect each other. This gives you a better understanding of how your business operates as a system or ecosystem. 5. Gives you a central document to share externalOnce you have filled out your canvas business model, you can share it widely, get feedback, and make any necessary updates. Since visual presentation is easy to understand and understand, teams, stakeholders, advisers and partners need to find a canvas to be relatively simple and easy to understand. BMC Server Automation 8.9 Setup This section explains how to obtain the files that are required for installation. The tables in the following sections list the installation files for download according to the instructions in the Download files. The video on the right demonstrates how to use the BMC electronic products download site to download software purchased from BMC. Product files downloaded from the BMC Software Electronic Product Distribution (EPD) website may contain some or all of the fixes that are listed on the product support webpage. If the EPD page shows that the hotfix is included in the file you downloaded, you don't need to get that patch separately. To download files:Create a directory that hosts the downloaded files. Go to the BMC Automation 8.9 download page. In the sign-in bar, enter your user ID and password, and then click Sign in.On the Export Compliance and Access Terms page, provide the necessary information, agree to the terms of the agreements, and then click Continue.On the Product or Fixes tab, select the files you want to download. Select the files you want to download. See setup programs for BMC Server Automation.Click Download (FTP). The selected items are placed in the FTP directory, and FTP credentials and instructions are sent to you in an e-mail message. The Single Product Installer is only supported for 64-bit Red Hat Enterprise Linux (RHEL) platforms and 64-bit Microsoft Windows platforms. Download itemName of the downloaded fileIn Server AutomationBMC <platform>for [x64]Download and extract the package appropriate for the operating system and hardware platform level in a temporary location. This package contains the UM product installation files. To start the installation, run the installation file provided in this mail package. BSA<version>-<platform>64.zipFor агента для всіх платформ: Містить RSCD агента інсталятори для всіх платформ. Уніфікований інсталятор продукту</platform> </version> </platform> </platform> RSCD installers when you install or update BMC server automation in your environment. Make sure you extract the RSCDAgent.zip file and copy the rscd folder to <temporary location=>section /files/installer/ before running the unified product installer. BSA<version>-RSCDAgents.zipSet:BSA89-RSCDAgents.zipIndividual component of the file installer Various product installers are provided in multiple package clasp to allow you to manually install individual components instead of using a unified product installer. For more information about the specific installation programs that are required for each platform, see BMC Server Automation Setup. The main product packaging, components of BSA<version>-<platform>.zipMultiple are included in the main packaging, BSA<version>-<platform>.zip. The following figure shows the structure of the product's main packaging catalog. The following table lists the following components: component and file name conventionDescriptionApplication Server installation file corresponding to the operating system and hardware platform level. BSA<version>- .sh or <platform>.exeInstilation of the application for the BMC Server Application Automation Server.Application Server Installer <installer path=>is located in the \BSA<version>-<platform>\Disk1\files\installers\appserver_.<Architecture> Note: Application Server Installer on UNIX and Linux also includes an installer for the PXE/TFTP server and an RSCD agent. Do not use the offline RSCD agent installer on a UNIX or Linux application server before you run the application server installer. BMC Client Console Automation Server <operatingSystem>for \<platform>BSACONSOLE<version>- .sh or<platform>.exeInstilation file for BMC Server Automation Console. The RCP client installer is located in the <installer path=>\BSA<version>-<platform>\Disk1\files\installers\rcp directory. NOTE: BSACONSOLE89-WIN32.exe is also available in linux 64-bit package (BSA89-LIN64.zip). From version 8.6.01 and above, the RCP client installer file for Linux x64 is available only from the 32-bit Windows package (BSA89-SP1-WIN32.zip or BSA<version>-WIN32.zip).db_scripts This file provides database installation scripts, required to configure the database schema before installing BMC Server Automation and updating the data to the current release. The file is included when you download BMC Server Automation from the BMC Electronic Distribution Products (EPD) website. The BMC Server Automation documentation refers to this file as a db_scripts. Click here to view an example of a directory structure that applies to data refresh. The following example shows the part of the directory structure that applies to updating data. файлів<version>-provision-files.zipFiles, необхідних для підготовки. Інсталятор для підготовки файлів знаходиться в <installer ></installer > </version> </version> </platform> </version> </installer> </platform> </version> </platform> </operatingSystem> </Architecture> </platform> </version> </installer> </platform> </version> </platform> </version> </platform> </version> </version> </temporary> </temporary> Catalog. Note: Windows zips platforms also include a .exe file to provision PXE/TFTP Manager for Microsoft WindowPatch Downloaders All-OS-Patch-Downloaders-<platform>-<buildmbernu><version>.tar, .zip or .tar.gz Patch bootloaders for different operating systems that are used by BMC Server Automation to create standalone repositories for the patch management feature. The loader utility package is located in the <installer path=>directory \BSA<version>-<platform>64\Disk1\files\installers\other_files files. Content Compliance Automation ServerContent<version>-<platform>.bin content for DISA, SOX, PCI, HIPPA. Contains various component templates and hotfix packages to perform compliance and fixes in a specific environment. The content matching installer is located in the \BSA<version>-<platform>\Disk1\files\installers\compliance_content. BMC Server Automation<version>Chef Support Pack Tool -ChefScripts.zip Script Set, which you can use to perform chef cookbooks on BMC server automation goals by using BMC server automation deployment capabilities and chef-solo.These scripts are located <installer path=>in the directory \BSA<version>-<platform>\Disk1\files\installers\other_files. PXE server installer file PXE<version>-WIN32.exeDate the PXE server installation file for Windows x86 and x64. The PXE installer is located in the <installer path=>directory \BSA<version>-<platform>\Disk1\files\installers\pxe__<Architecture> files. Additional component zip filesIn the following components are packed in separate zip files. Each mail package in the following table contains files for all different platforms:File nameComponent and description (text link EPD in bold)BSA<version>-RSCDAgents.zipRSCD Mass Installation AgentRSCD<version>-<platform>.sh, .rpm, gz, .bff, .deb or .msi BSA <version>RSCD Agent for all platforms (AIX, VMware ESX, HP-UX, Linux, Solaris, Ubuntu, Windows) Open the installation file according to the operating system and hardware platform level. BSA<version>-NSHBundle.zipBSA for all platformSSH<version>-<platform>.sh, .rpm, .gz, .bff, .deb or .exeContains the installation program for the cross-platform shell of BMC Server Automation with full scripting capacity for all platforms: AIX, VMware ESX, Unix, Linux, Solaris, Ubuntu, Windows. Open the Network Shell installation file according to the operating system and hardware platform level. Third-party open source software contains additional materials. File control:BSA md5 control system and SHA-256 (sha256sum) control system for basic ZIP files on EPD. Yellowfin components for дошки Live ReportingYellowfin компонентів, необхідних для настроювання приладної дошки Live Reporting. Для нової інсталяції встановіть BladeLogic_LiveReportingInstaller.exe та BladeLogic_LiveReportingInstaller.bin для</platform> </version> </version> </platform> </version> </version> </Architecture> </platform> </version> </installer> </version> </platform> </version> </installer> </version> </platform> </version> </platform> </version> </installer> </platform> </version> </platform> </version> </installer> </version></buildnumber> </platform> </platform> and Windows platforms. The update is not supported. For more information, see Install and configure Yellowfin to enable live reporting (for versions 8.9.01 and later). BSA Add-ons - BSA -Optional.zipThis package contains components that are not required for<version>basic installation of automation of the BMC server: Component and file name conventionDescriptionRSCD Agent - standalone installersRSCD<version>- .sh or .exe Separate<platform>BSA RSCD Agent files for Linux, Solaris and AIX platforms. Open BSA <version>RSCD Agent for <platform>a file that is related to the operating system and hardware platform level. AIX_Multibos_Scripts.zipAIX_Multibos_Scripts file contains the following NSH task scenarios: aix_multibos_script.sh is used to create an instance of multibos on AIX Server.server_reboot.sh used to restart the AIX server and change the boot instance.check_server_reboot.sh used to check if the AIX server restart succeeds. BSA-SOL11-Patch-Solution-<version>.zipScript-based solution for solaris 11 patch management. This package contains scripts for updating solaris 11 patch repository and performing solaris 11 patch analysis. For more information, see How to perform script-based patch analysis for Solaris 11.Vendor Patch Contentbladelogic-serverautomation-patch-content-v .zipVendor Patch Content configures custom Network Shell scripts to integrate with software assistant<version>(industry standard patch analysis tool) to perform actions required for analysis, download and batch patches for HP-UX and CentOS platforms, as well as providing all other assets needed to run patch analysis. BMC BladeLogic Atrium Integration Files: BMC Atrium Single Sign OnLicense Information for BMC Atrium Shared ComponentsBMC Atrium Single Sign On DocumentationNote:Before you run the BMC BladeLogic Atrium integration installer on a Linux system, make sure that the libstdc++.so.5 library is present. This library is required for the native RIK process used by the BLAtrium installer. For a complete list of dependencies libraries, see the following topic in the BMC Remedy ITSM Suite 9.0 Deployment:Unix Environment PreparationWhere to go from hereFor checking system requirements for your platform before you perform an installation or upgrade.
