Free stickers 2020 for whatsapp

With more than a billion users, WhatsApp is one of the most used messaging apps in existence. As a free app owned by Facebook, WhatsApp costs nothing for users to install and enjoy its many benefits, such as end-to-end text encryption and free international VoIP calling. You want to get into whatsapp madness? We put together this quick guide to start using WhatsApp messenger on iOS, Android or desktop in a few simple steps. What's new with WhatsApp? WhatsApp is often updated with new features and improvements. For those who use iOS 13, WhatsApp contacts now appear as suggestions in the sharing sheet as you share content from other apps. New search options let you filter by author and content type so you can easily find specific conversations or pictures you're looking for. The app has also set up new privacy settings that allow you to control who can add you to groups, and administrators can send you a private invitation. Go to Settings > Groups > Privacy > to get started. WhatsApp has added support for calls so you can accept incoming calls from WhatsApp during another call. You can now send messages from the Braille keyboard when you also use VoiceOver mode. And now, enabling Low Data Mode will disable automatic media downloading. Recent whatsapp updates included new animated sticker packs, QR code contact scanning, and Dark mode for WhatsApp Web and Desktop. But perhaps the biggest change is that the maximum number of participants in video and voice calls has doubled from four to eight. In video calls, you can now press and hold to maximize a participant's video, and the video chat icon is automatically added to group conversations of eight or less, so you can start a video call with one touch. Downloading and installing WhatsApp is available from all popular app stores for all major platforms, including iOS, Android, Windows Phone and Mac and PC. The app is completely free. Just install and launch it as you would be any other smartphone app. You will be asked a number of setup questions, including your phone number and country code, and whether you want notifications. If you've used WhatsApp before, you might be asked if you want to restore your chat history. This is your only chance to do that. If this is the first time you've used the app, you can skip Restore if it appears. Then enter your profile name and photo and allow WhatsApp to access your contacts. The app will send you an SMS message to check your number of and the country code when you type your phone number. You can re-do the number if you make a mistake. Set up your WhatsApp account to access your contacts and photos. Tap the name and add a picture as an avatar. Once you're done hitting on your details, you're ready to chat. Adjust settings At the bottom right of the screen, you'll see the Settings tab, which lets you edit profile in the About section. Besides adding an avatar to your name and number, you can also customize the About description. The default status of the profile is, hey there, I'm using WhatsApp and that can get a little older, especially if most of your contacts don't bother to change it either. Don't be that person. Change your status to anything you want, or even use some of the prefabricated states if you don't want to make a new one. WhatsApp has plenty of options, including: Available, Busy, At School, At Work, In a Meeting, Battery About to Die, Sleeping, and more. In the Settings pane under Edit Profile, find the About line and tap. You'll see the currentset status at and you can choose from the predefined ones. You can also write an original state if you prefer. Your status will only be updated on other people's phones when you turn on your data or wi-fi. Change your phone number If you have a new number and need to change it on WhatsApp, it's easy to do. Just click the three dots at the top right of the WhatsApp screen, and then select Settings > Account > Change Number. The app notifies you that changing your phone number will migrate your account information, groups, and settings. You'll still have access to all the old messages. Make sure your new phone is set up and that it can receive SMS or calls. If you have both a new phone and a new number, you'll first need to change your number on your old phone. Tap Next, and then enter your old phone number and new number, and then tap Next to confirm the change. Determining WhatsApp privacy levels gives you a range of options about who can see you and how much information the app can share about your activities. You can set Last Seen, Profile Photography, About and Status to be seen by everyone, only your contacts or anyone. The last time you saw it was when you were last signed in to the app. It also indicates the live location if you have it enabled in your smartphone settings. You can also choose who can see status updates. In addition, you can use your privacy settings to block contacts. A blocked person can't call or send you messages, but the app won't notify them that it's been blocked. Instead, they will only see a green check mark to indicate their message has been sent (and not the second check mark to indicate delivery). They won't be able to see the status of The Last Person Seen or Online or view your profile picture. Read Receipts, which you can activate through a check box, send notifications when you or your <a0>Windows</ When you're disabled, you won't send or receive receipts, except for group conversations. Adding new contacts To view contacts in WhatsApp, you don't need to do much. That's because all contacts who use WhatsApp are already known without having to add them manually. WhatsApp defines contacts by phone so anyone in your address book who has their phone number on WhatsApp is revealed immediately when you join. However, you may want to invite contacts that aren't already on WhatsApp, as well as people you know who aren't currently on your contact list. To add friends to WhatsApp contacts, do the following: tap the Conversations icon at the bottom right. Tap New Contact. Add that person's name and phone number. You can now also add friends by tapping the QR Code symbol to the right of the new contact and scanning the QR code. If you're adding an international friend, make sure you do the following. When you add the contact's phone number to your address book, start with a plus sign (+). Type the country code, a nation-specific numeric prefix, followed by the phone number. Search online to find the right country code if you don't know it. Remove all start zeros or dialcodes from the actual phone number after entering the country code. Start chat chat is the easy part, because all you need to do now is select your friend, and start yapping. As you start the conversation, you'll see an alert that will tell you that communication is encrypted so that no one can ever see or listen to the conversation. Your friend gets a notification on his phone that you've sent them a message, and so on. Select the person you want to talk to. Tap the chat box at the bottom of the screen. Type the message and feel free to add emoji, pictures, videos, or voice messages using the icons to the right of the chatbox. The small square allows you to add a sticker. The camera lets you add a photo or video, and the microphone lets you press and hold to record a voice message in the app immediately. You can also format text in bold, italics, clipping characters, or code. Then tap the arrow icon to send it. But what if you want to send a message to more than one person? There are two ways to do this: Form a group or broadcast to a group. The option you choose depends on how you want to communicate and the answer you're looking for. The difference between group messages and broadcast messages is that with group messages, it can be a free-for-all – anyone can talk to anyone else in a free exchange. With the messages in the mailing list, it's more of a from top to bottom – talk to a group, but they can only respond individually and privately to you, not to each other. Forming a group of group conversations lets you share messages, photos, and videos with up to 256 people at the same time. You can also name the group, turn off or customize notifications, and more. A group setting that allows administrators to send messages to a group can simplify communications under certain circumstances. Circumstances. new Chats icon. Tap New Group. Add all the participants you want to include (up to 256). Tap Next. Add a chat topic and an icon. Tap Create. In the resulting chat dialog, start the encrypted message with stickers, pictures, or a voice message. You can easily start a group video or voice call for groups of eight participants or less. Just tap the Camera icon at the top right of the group conversation to start a video call or phone symbol to start a voice call. Using broadcast lists The WhatsApp Broadcast List feature allows you to send a single message to multiple contacts who won't see that the message was sent to other people. Only contacts with the number in their address book can receive broadcast messages and can only reply individually by chat, unlike group messages. Back up conversations Say you're done discussing. And now what do we do? After your conversations are over, you can choose to drop them. Chats are stored immediately in your phone's memory. But you can be more systematic about it and back up conversations automatically or manually by tapping the Backup button. You can also choose to include videos or not. For iPhones, you can back up to iCloud; with Android, you can back up to Google Drive. WhatsApp recommends disabling cellular data when backing up or restoring conversations in iCloud or Google Drive, as this may involve data charges. You can also archive, delete, or delete all conversations if you no longer need them. Go to Settings and tap Conversations. Tap Back Now. Use the slider to include videos or not. Updating the status You can use the Status pane to update your status. Status updates expire after 24 hours. Tap the Status panel. Tap the Pen icon. Tap the paint palette icon to set different background colors. Use the keyboard to tap the message. Use the Type tool to change fonts. You can also set a photo, video, or emoji as a status update. Sync with Mac or Windows With WhatsApp installed on your phone, you can access a web version of the app that reflects chat, group, and broadcast activities. You can use the web interface on your Mac or Windows in major browsers to chat, but you can't make phone calls. You can also turn on desktop notifications for alerts on incoming WhatsApp messages. Click the WhatsApp download link to download and install WhatsApp on your computer. Open WhatsApp Web in your browser. When QR code request, use the mobile app scanner to scan it. You'll then be able to access your conversation history and send and receive messages within the web interface. Changing wallpaper Nobody enjoys a boring chat, so make yours more interesting by incorporating a wallpaper background. You can choose from your favorite camera roll photos, wallpaper library images, and solid colors to add some excitement to your conversations. Your, easy to do. From the settings page, choose Chats > chat wallpaper and choose from the Wallpaper Library. Solid Colors, or one of your photos. Bottom line We love WhatsApp Messenger because it is simple to use and fast to learn. Start slow with regular dialing and text messages before you sink into more extensive features. These features allow you to update your status, send messages to groups, and communicate with groups, keeping everything encrypted. And the best part is that everything is free.
