Free super loud ringtones for android phones

A ringtone is the sound your phone makes when there's an incoming call. Ringtones come in many different sounds. Although your phone comes with some ringtones, you can download additional ringtones directly from your mobile service provider or one of the many websites that offer ringtones [source: Beck]. This requires your phone to be connected to the Internet over a wireless connection. There are several types of ringtones, including: Musical Tones The phone will play part of a melody every time it rings. Voice tones You will hear a recorded voice whenever there is an incoming call. Sound tones You will hear sound effects when the phone rings [source: ATT]. Here's how to get ringtones offered by two of the most popular mobile phone providers. Verizon Press on the Get It Now arrow, which also serves as the right navigation arrow on the handset. The Get It Now browser will open. Scroll down the list using the navigation arrow until Get Tunes & Tones appears.Press OK. Select 1. Grab ringtones and press OK. Choose 1. Get a new app and press OK. Choose True Tones and press OK. You are now connected to a list of available ringtones. Select VZW Tones Deluxe to download the tones to your phone [source: Verizon]. AT&T Go to the AT&T AppCenter home screen and choose Categories.Choose Ringtones, Ringtones, Ringback Hue, Games, Applications.Choose Ringtones.Filter to select the ringtone you want to download. Choose Get and enter the information you'll be asked for. Choose Buy to download the phone ringtone [source: ATT]. If you want to buy ringtones from an online store, simply visit the online store and follow the instructions listed there. Source: Joe Maring/Android Central There's a good chance your smartphone will act as a hub for everything that's going on in your life. It's where you keep all your contacts, loved photos, important documents and almost everything in between. Your phone allows you to easily access these things, no matter where you are, but what if something happens? Whether you break your phone or have time to move on to the next best thing, here are some things you can do to back up your Android phone. Apps used in this guide Source: Joe Maring/Android Central First thing, let's talk about photos. They say that the best camera is the one you have in your pocket, and for many people, this causes you to be used to take photos of almost everything. From selfies to family portraits, chances are these are all captured and stored on your phone. With so many special moments living on your phone, it's important to keep them backed up in the cloud so they're not Forever. For this, we recommend Google Photos. Google Photos is 100% free and offers unlimited cloud backups of photos and videos. Once the app is downloaded and installed from the Play Store, configure it just a couple of taps. Open Google Photos. Sign in to your Google account. Choose the quality settings you want. Wait for the photos to sync. Source: Android Central With this fact, Google Photos will take all the photos and videos on your phone and save them to the cloud on your Google account. If you have a lot of images on your phone and have never set Google Photos before, it may take some time: be patient! In addition, with Google Photos now configured, you will automatically back up any additional images or videos you capture. While Google Photos is free, unlimited free image backups are saved in what Google calls high quality. This is a low-resolution file of your photos, and while they will still be beautiful, it won't be as sharp as the original file. If you want to back up your images in their full original resolution, this will count on your Google One storage (plus on that in a while). For a deeper dive into backing up images with Google Photos, be sure to check out our guide. One place for all your photos and videos. When it comes to cloud photo storage, no one does it better than Google Photos. The app is easy to use, all your memories are saved for free in the cloud and is easily accessible on all your devices. Source: Android Central Ok, so you have your photos backed up, but what about all your other files? This is where Google Drive and Dropbox come in. Both are cloud storage apps, allowing you to keep all word documents, presentations, PDFs, and other types of files safe from your phone's on-premises storage. Getting started with both apps is pretty simple. For Google Drive: Open Google Drive on your phone. Tap the + icon in the lower right corner. Tap Charge. Select the files you want to upload. Source: Android Central All Google Drive users get 15GB of free storage to use directly from the gate, but if you need more, you'll have to pay a monthly fee. Extra Drive storage is sold through Google One, with plans starting at \$1.99/month for 100GB. There are loads of levels on offer, including 200GB, 2TB, 10TB, 20TB and even 30TB. If you don't want to use Google Drive for any reason, we also recommend using Dropbox. After downloading Dropbox from the Play Store, being configured is simple. Open the Dropbox app on your phone. Sign up for an account or sign in with Google. When logged in, tap the + icon. Source: Android Central You can use Dropbox for free, but you only get 2GB of storage for free compared to Drive's 15GB of free space. If you want to switch to a plan to Dropbox Plus costs \$11.99/month and comes with 2TB of storage space plus 30-day file recovery, Dropbox Smart Sync, and other features. Plenty of free storage with flexible paid plans. Google Drive is one of our favorite cloud storage solutions. It is deeply integrated into Android, Android, with a generous amount of free storage and has a variety of paid options for any budget. If you want an alternative to Drive, dropbox is also worth checking out. It has great mobile and desktop apps with a great paid storage plan. Source: Joe Maring/Android Central If you use a messaging app like Facebook Messenger or Telegram, accessing your messages on your new phone is as easy as accessing your account. However, if you still rely on good old-fashioned SMS text messages, things are a bit more complicated. You will need to download an SMS backup app from the Play Store to save a backup of all your texts and then on your new phone download that backup so that all your conversations are restored. There are a few apps you can download to do this, but the one we recommend the most is SMS Backup & Restore from SunTech Pty Ltd. It's a free download on the Play Store and setting it up is pretty simple. Open SMS Backup & Restore on your phone. Tap Start. Tap Configure Backup. Source: Android Central From here, you can back up not only text messages, but also any phone call history you have. For a deeper look at how this processor works, be sure to check out our guide. By the way, if you use WhatsApp as your primary messaging app, there is a completely separate process that you will have to follow to back up your conversations. You can take a look at our guide on this topic right here. New phone, same old texts. For those of us who still use old-fashioned SMS, SMS Backup & Restore is an essential app. With just a few taps, you can back up all your

text conversations and quickly restore them to another device. Source: Joe Maring/Android Central On a related note, something else you'll like to make sure it's backed up are all your contacts. For this, we recommend using Google Contacts. Devices like Pixel 4a and Moto G Power come with Google Contacts pre-installed, but if you have a phone from OnePlus, Samsung, or LG, chances are you're using a contact app made by that manufacturer. If you're already using Google Contacts on your current phone, you can download the app to your new phone, sign in to your Google account, and all your contacts will sync automatically. If you need to dig a little deeper, Google Contacts also offers tools to import, export, and restore contact files. Open Google Contacts on your phone. Tap the menu button at the top left. Tap Settings. Source: Android Central Here you can import a .vcf file, export contacts from a Google account and restore saved contacts your account. Source: Joe Maring/Android Central Moving right along, you'll also like to make sure all your applications are backed up. Backing up apps was a problem, but nowadays, Google keeps an automatic backup for you on your account. Therefore, by downloading your apps and and of their data is as easy as diving into the settings on your existing phone, making sure the switch is turned on, and selecting the backup option when you get the new device. On the current phone, doing so is as easy as follows: open the settings on your phone. Tap System. Tap Backup. Source: Android Central On this page, you can turn automatic backups on/off, manually start a backup, and see when last time backups were made for app data, device settings, and much more. Again, we have an in-depth guide that gets into this topic in much more detail to help you. How to back up a Samsung phone Source: Andrew Martonik/Android Central Finally, if you're switching to a Samsung phone, it's worth checking out the Samsung Smart Switch app. This involves downloading Smart Switch to the old and new phone, connecting the two wirelessly or with a USB cable, and transferring all data in one clean sweep. Smart Switch can be used to transfer pretty much everything, including: Contact History Calendar Data Text Messages Pictures, Media and other files Getting started with Smart Switch on your old phone is pretty simple. After you download the app from the Play Store, follow the following on-screen instructions. Open Smart Switch on your old phone. Tap Accept. Tap Allow. Tap Let's go. Source: Android or wireless central touch cable depending on the method you want to use. Source: Android Central One last time, we have a more detailed guide that guides you through every step of this process if you want a deeper dive into how it works. The easiest backup/recovery tool for Samsung phones To switch to a new Samsung phone? In that case, the Smart Switch app is one of the best backup and recovery tools out there. After establishing a connection between your old and new devices, all your data is transferred without ever having to mess with the cloud. Serti your phone on the go can be tricky if you leave for long periods. Luckily there are some great portable chargers to keep you seasoned throughout the day. Keeping your phone connected while traveling is constant pain, but a nice long USB cable can relieve some of the stress of using those hard-to-reach sockets. Anker's cables are sturdy and this six-foot example is a great travel companion. When you travel you don't want anything to slow you down, so make sure you have a portable battery that quickly charges your phone. This Anker 10000mAh package supports 18W USB PD and is incredibly lightweight. This is a super compact USB-C car charger that you can and forget that it is there until you have to charge your phone at maximum speed. Isn't that helpful? We could earn a purchase fee using our links. Learn more. More. More.
