© 1996-2015, Amazon.com, Inc. or its affiliates © 1996-2015, Amazon.com, Inc. or its subsidiaries No results for SIBOASI S6839 Professional Basketball Shooting Machine Rebounder Automatic Basketball Return and Adjustable Guard Net LED Display Control Panel Portable Basketball Training Equipment. Try to check your spell check or use more general terms Visit the help section or contact us © 1996-2014, Amazon.com, Inc. or its subsidiaries SLZ Solo Assist Coach net - lower, portable, passing net so you can pass, capture and shoot. The \$138 Toss Back Basketball Rebounder via Epic - a little more sturdy and upright: \$299 Rebounding Support SLX Kickout - \$38 via Amazon - have to do it for it to kick back - think it's okay, really easy to connect to the frame, not heavy, but should weight the base on laptops. Ball Return Net - \$89 - if the ball keeps hitting the base or slowing down or going into the woods - the problem is that the weighted bags must be on the field, so can't go in the basket when using this. Gorilla Yard Net - \$239 via Amazon - this would be added to the SLX Kickout to prevent misses from going into the woods or behind the net. It can also be folded up neatly and neatly on the sides of the rod. iC3 Shot Trainer - \$499 - \*BEST VALUE\* This is the best value because it has wider net over a rear and can be put on laptop or ground. Seems hefty to put up there/take down without two people. Although the iC3 Shot Trainer is on the more expensive side, costing about \$499.99, its features make it the best value rebounding machine on this list. The net stretches over the edge, collecting made or missing shots. In addition, the high net design will force you to improve the arc of your shot, something that will benefit many who want to improve their jump shot during the summer. The ramp that connects to the net simulates a pass from a teammate, making it great for those struggling to shoot out the pass. Although this rebounding machine holds up very well in all weather conditions, it is also easy to pack up and be stored if that's what you want. Rebounding & Passing Combo Basketball Rebounding Wide Net & Passing Machine – Installed in 20 seconds. You have to request an offer. Other systems run between \$2,000-\$6,000. This one seems simplest. Dr. Dish x Home - \$2995: Their patented design forced you to use correct shapes. Rebounding and passing are taken care of to leave you to focus on your seat and you shot. Compact and lightweight design makes storage easy with setup and take down in minutes. The Gun - They have different models. A vendor website sells it for \$5,400... this is too high tech for my taste. Most college gyms use them. So you need a big court, hoop, and place to store. Dr. Dish All-Star Model - \$6500 If you are willing to spend \$6500, the on Dish All-Star Model, with all its remarkable abilities, can be yours. This rebounding machine contains all the features from the previous two, but what distinguishes this rebounding machine from the others is the way it utilizes technology. It is the only shooter designed with a complete training management system. A large LCD interface displays real-time statistics by location. By connecting to the Dr. Dish app, you can view and analyze your shooting exercises. The app can also track your heart rate if you want to push game speed practices. Hot Shot Shooting Machine - WOW it's \$9,500 Tiles for Home Court Backyard Basketball Court Flooring - Some prefer these tiles to their home turf. All the latest on blogs, podcasts, videos, training tips, programs and more Since I was a kid, I spent many hours shooting hangers in the driveway of my parents' house. This driveway wasn't exactly a regulation-sized basketball court: the front end of the sidewalk was our free throw line, there were walls on either side of the narrow driveway, and the cobble sidewalk was slanted considerably toward the street. Forget about working on your dribble in these conditions! But it turns out that the oblique driveway was a big plus for working on my free throws. I could spend hours shooting the ball and if I swished a shot the ball would automatically return to me. I only recognized this advantage later when I was shooting hoops on a perfect even basketball court – rebounding my misses significantly reduced the number of shots I could get up in an hour! This is where basketball return systems come into play. They will rebound your made shots (and some will rebound your misses too) and help you maximize the number of shot attempts you can take. In this article I will explain the differences between different types of basketball vending machines and show you which one will work best for you. The Best Basketball Return Machines: Very affordable and quickly installed The mechanism is not 100% reliable and does not rebound misses Offers for SKLZ Kick-Out 360 These links are affiliate links, which means, at no additional cost to you, we will earn a commission if you click through and make a purchase. Prices last updated on December 24, 2020 06:21 Net return made shots and close misses Do not work if you shoot from the corner Receive rebounds in a more natural shooting position Will rebound almost 100% of your shot offers for iC3 Basketball Shot Trainer These links are affiliate links, which means, at no extra cost to you, we will earn a commission if you click through and make a purchase. Prices last updated on December 24, 2020 06:21 As you can see, there are many different types of basketball vending machines on the market. But how do you find the perfect one for you? There are a few questions you should yourself: Do missed a lot of shots? The most basic and affordable rebounding systems like Spalding Back Atcha are attached to the bottom of the ring and only change the direction of basketballs that actually fall through the net. - you still have to rebound miss yourself! If you make 90% of your free throws, this won't pose much of a problem, but if you're still a beginner, rebounding systems like that won't help you much. More advanced basketball return nets will also rebound shots, jumping out of the ring, but if you want a system that returns 100% of your shots, you will need to invest in a more professional basketball return machine like the iC3 Basketball Shot Trainer. Want to work on your corner three? A lot of return systems will always return basketball against the free throw line, no matter where you shot from. If you want to work on your corner three, it's counterproductive as you need to run towards the middle of the track after every shot! If you want to work on your bank shots take a look at the SKLZ Kick-Out 360 or iC3 Basketball Shot Trainer that allows you to adjust the direction of the rebound. Top 5 Basketball Return Systems: Spalding Back Atcha The Spalding Back Atcha is probably the most affordable basketball return system on the market. It is made of thick plastic and comes with two hooks that are attached to the back of the rim. If you make a shot, the basketball will hit the plastic structure after passing the net and will be kicked slightly against the free throw line. The success rate of this mechanism varies somewhere between 50% - 95%, depending on the length and material of your net (nylon or metal?), and how well plastic hooks attach to the frame. But don't expect long shots to be returned all the way to the three-point line. Also, the rebound of the ball will always go toward the middle of the court, which can be annoying if you shoot from an angle. Overall, spalding back Atcha is a very affordable basketball return system that you can attach to most hoops within seconds. Although it doesn't do a perfect job of returning made shots and won't return misses at all, it will still allow you to save a lot of time. Chasing down the rebound after every second shot is still much better than running every time! The SKLZ 360 works much in the same way as The Spalding Back Atcha presented before, but the mechanism is a bit more complex and versatile. The installation is pretty simple: If you own a height-adjustable basketball hoop you just lower the frame and clip the four hooks to the rim. Otherwise, you will probably need a small ladder unless you are 7ft tall. The parachute of the SKLZ 360 hangs about 28 inches below the rim and does a great job of returning the ball. The best feature of this parachute is the fact that you can rotate it by 360 degrees! In this way, you can get return regardless of where you are recording from. Young children won't be able to do this at a 10ft hoop, but someone taller than 5'8 should be able to do so without a ladder or lower the frame. The quality of the SKLZ 360 is much better than The Spalding Back Atcha, but some people still report that the parachute can change direction on its own and that plastic hooks won't last forever. But you should be able to solve these problems with a little bit of duct tape and metal wire tape. Overall, this is a basketball return system with much improved functionality that I can recommend if you are looking for something you can attach and detach easily. The only downside: it didn't rebound missed shots. Goaliath Basketball Return Net Goaliath is known for producing high quality ground basketball hoops, but they also sell accessories that make the lives of basketball players easier. This basketball return system is the first in this article that can rebound missed shots too. It is especially useful for beginners who still lack a majority of their trials. The installation is quite simple: you attach the strap to the metal rod at the top of the net and pull this harness over the rear end of the edge. On the other hand, the net is attached to two bags that you can fill with water or sand. Goaliath returns net particularly well if you want to prevent the ball from going into the neighbor's yard or a thorny bush of roses. But if you are looking for a system that will replace your buddy passing you the ball as you move along the 3-point line, then you better keep looking. SKLZ Rapid Fire II SKLZ Rapid Fire II is comparable to the Goaliath grid, but comes with a significant difference: the grid is attached to two hip height stands. This little change is great because you no longer have to bend down to collect rebounds. Instead, you get the ball in a much more natural shooting position. This ball return system easily attaches to the upper left and upper right corner of any metal frame backboard, unfortunately it won't work for molded backboards. The net is held by two adjustable metal arms that extend from the top of the back plate. By placing tripods differently and turning your arms on the net, you can direct rebounds to different locations on the court. You can also use the net as a ball stop by fully folding back the arms. Overall, SKLZ Rapid Fire is a very versatile basketball rebounding system that allows you to get shots up at a much higher frequency because you receive basketball in a position that comes close to a regular pass in a game. iC3 Basketball Shot Trainer iC3 Basketball Shot Trainer plays in a different league than all the other rebounding systems presented so far. It is an affordable entry-level model of Dr. Dish Basketball, a well-known company that also builds passing machines that cost thousands of dollars and are used by professional basketball players. iC3 is made of a sturdy steel frame that you hang over the rear end of the rim and attach to the rod of your basketball hoop. If your basketball hoop doesn't have a rod, you can still use iC3 if your backboard is at least 60 inches wide. The net stretches across the rim and catches almost every missed shot. This design also forces you to shoot with a proper bow and actually improves your technique. The net funnels the ball into a small ramp, which you can rotate at 180 degrees to receive rebounds in every position on the court. The rebounding system is not very fast, but if you use two basketballs you can shoot nonstop rapid-fire style! The iC3 Basketball Shot coach is by far the most professional rebounding system that is still affordable and does not cost thousands of dollars. If you are an ambitious basketball player and you want to work on your shot, then this is the system to get! Conclusion I recommend you to go to the iC3 Basketball Shot Trainer. It is the most expensive system in this roundup, but also by far the best! It rebounds almost 100% of your shots, you can change the direction of rebounds, and it even forces you to improve the arc of your shot! If you are looking for a cheaper solution and you are a pretty good shooter, then the SKLZ 360 is a good option too. If your kids are learning to play basketball in the driveway and you want to prevent the ball from jumping into the neighbor's garden then check out the Goaliath Basketball Return Net. .
