G voice assistant

G-Voice Assistant allows you to ask questions and send teams to the Google Assistant system.
★★★★ problem
★★★★ Q1. What commands support the PRO version? Paragraph A1 is to take into You can use the following commands:
• make a phone call
• send a text message (fully supports smartwatches with SIM card)
• launch app on smartwatch
• set alarm
• record/ play/ delete audio note
• enable / disable / check status GPS / Bluetooth / Wi-Fi
• Read your heart rate/air pressure
• check battery charge level
• check network connection
• off/on sound watch
• open viewing settings
• open viewing settings;
The application supports all Samsung Smartwatches with Tizen OS (min. ver. 3.0). Keep links to galaxy store:

G-Voice Assistant (Google Assistant)
Reactions: Dixon Butz and bromonano are running amazing so far! tempted to try the pro version? after using it for a while, it saysQuote exhausted. Log off and restart the application. Last edited: Jul 23, 2020
What happened to the links? Hey, this is a really great app! But this is a serious disadvantage: After a few questions, voice recognition and voice response switches to English, although it was designed to listen and answer in German (set to German settings). Also, can you add a listen to the launch setting? Just noticed that somehow, the app lost its login and I had to re-login. Now it's back to my default language. I tried to uninstall the normal version after purchasing and installing the pro version but its pro no longer works. So, is it necessary to have both the normal and pro version at the same time? I would like to install only the pro version, is it possible? Thanks for the reply! I purchased this application on my watch, but after a couple of commands it loses out in Italian and the commands are set to English. It doesn't work. Can I create gpay for galaxy watches? I plan to buy a galaxy watch 3, but Samsung pay is not yet possible in our country. Tnx So far, much better designed and simpler than GAssist. No need for phone companion app. On the downside, it seems the results are scrollable on the website. Still allows me to control my home devices, so I'm making the transition from GAssist to this one. What command do you use to start smart devices? The same team works for me on the phone but doesn't watch. Watch it try Application. That is good! Had to turn to BT. Bt. They will fix BT according to the response on youtube. There was a pain in the ass to write an email and login. Somehow we managed to switch to handwriting. I like it, I can change the volume with the bezel. Controls all my home smart devices. You are prompted to set a reminder. Crashed after I said time. Then said the number is trying exhausted. Please restart the program. Then you just have to close it in Recent Apps, and it works again. Is there a way to switch to a normal on-watch keyboard during a login, vice T9 one? I can't enter because, for some reason, the T9 keyboard keeps messing up my password. Sent from my SM-N950U using Tapatalk Is there a way to switch to a normal on-watch keyboard during a login, vice T9 one? I can't enter because, for some reason, the T9 keyboard keeps messing up my password. Sent from my SM-N950U via Tapatalk T9 keeps messing up my Gmail and pw. It didn't write the right letters. I accidentally switched to handwriting. So there must be a way. Turn off predictive text so that the T9 will work as it should. I uninstalled the free version and bought the pro. You have a free version installed with a pro. I tried pro free version. Works only if both are installed. When I turned off the sensitive text, T9 worked as expected. When you entered your password, handwriting input somehow came back. Last edited: Aug 1, 2020

Page 2 Pro stopped working. When you close and turn off the screen. To fix it, I had to uninstall both pro and free of charge. I reinstalled free and had to log in again. I'll just stay free now and see if it craps out. And there was a article that drops up when introducing your password by pressing the eye thingy. curve can I create gpay for galaxy watches? I plan to buy a galaxy watch 3, but Samsung pay is not yet possible in our country. Tnx get a curve card if it can be issued if you live. where I live samsung pay is not supposed to be available at all, but it works like a charm with my curvecard attached. I hear that it works in most European contries Learned who was making it permanently crash and turn off the screen. If you are using this app while Bluetooth is accidental, it will crash. And keep crashing even after you turn off Bluetooth. It seems to happen when only free, or free and pro is installed. Fix by uninstalling both if you are a pro. Or just uninstall it free if that's all you use. Then reinstall. Just do not try to use this app with BT. I'm in touch with the support. So they know. Reactions: Galaxy Privacy/Reputation Google warns that the app needs extended access to a user's Google account. I understand this is because Google Assistant itself has a high level of permissions/access for the user account to begin with. However, this program does not policy or other reason to help to obtain assurance about the granting of the access requested. Is there at least source code code on GitHub? Last edited: Aug. 9, 2020
Those who write apps pay or usually don't release the source code. It's a lot of hard work. The source code that Gassist.net app was released after the project was canceled. Using access to this app for a google account doesn't mean they can view your data. This is only necessary to be able to control smart devices and other things. It does not send any information to the author. And the only way for him to see your logs is if you have a debugging version and download logs to your phone and send them via email. . Get a curve map if it can be issued if you live. where I live samsung pay is not supposed to be available at all, but it works like a charm with my curvecard attached. I hear that running most of the European contries I have is Curve, and it works great with gpay on my phone. Can I set a fee on my Galaxy watch 3? Can you please give me an example of a problematic device/command? Run/start Device Name. The Assistant can't find the app, instead of using Google Home devices. I use these commands in Polish. I've already reported this via email. Start/Run is reserved for launching the app smartwatch. In the next version (1.0.8), if the program is not found, the system tries to start the device with the name provided. Please contact me by email about the results. I can't find the App anymore in the store. Thanks for the quick reply! Page 3 Hello, very nice job in this app, thank you! French working fine for the free version. I would like to buy a PRO, but would like to know: - it works with french yet - what features does it unlock? Thanks again, great job! Weird ok is the pro and the standard installed tried just using pro but it makes me download the free version if I try to open either it takes forever to open then which of I opened will be close and the other starts and finally it works sent from my [device_name] via the XDA-Developers Legacy app is available in Spanish? If not... how much time is expected to wait until Spanish is available? Not yet. We will add new languages within 2-3 weeks. ----- Post added 09:01 ----- Previous post was 8:58 am ----- Weird ok is pro and standard installed tried just using pro, but it makes me download a free version if I try to open either way out forever to open then whoever I opened will be close and the other starts and finally it works sent from my [device_name] using the XDA-Developers Legacy app PRO version is a plugin for FREE. You don't have to launch PRO, launch for FREE and PRO will be loaded in the background. V1.0.9 are we start-up scheme. Just ****, I buy the pro version ^ but the pro version does not support russian. Ok no problem but lite version version 1k. Ok, why everytime, if I open you the app, the app will show me this warning. Its unusible. Please show me once this, I can ask an assistant in English, but I don't want to push OK everytime! Just ****, I buy the pro version ^ but the pro version does not support russian. Ok no problem, but the lite version supports it.. Ok, why everytime, if I open you the app, the app will show me this warning. Its unusible. Please show me once this, I can ask an assistant in English, but I don't want to push OK everytime! Thanks for the info. The dialog will be fixed/removed in the next version. Now, please just switch the language in the app's settings to English. First, the program does not work with the included Bluetooth, secondly, after the spoken team assistant turns off and it is not possible to continue the dialogue. For example, the task: send sms to tomutu, the assistant asks what we write? And that's all, the microphone isn't active, if you press the microphone button again, then a new task is set up instead of continuing the old task. Buy the time when it loads, the screen turns off. I have a 15 second screen timeout. Make the car listen to start listening when the screen is turned back too. Just like just tapping the screen to wake it up. This is very useful if someone uses a helper often. Gassist is it. Try it. Please use the option to disable hand gestures. It's battery draining. Last edited: 29 Sep 2020
Can't find free or pro versions of galaxy store =/ Page not found, neither app name edited. September 17, 2020 Hello, I bought a Pro version (and waiting for French command support) you tell us to start the app with G-Voice Assistant standard, but every time I started the App, I have a G-Voice Assistant Pro that also starts 2 or 3 after sec. Can you download it in the background ? I don't have time to do anything because the screen shuts off (15s) before the pro is loaded. I think mecanism is perfectible in this matter of load. Can we remove this bubble animation at the beginning? It freezes and it just makes it a lost time to load it. Thanks for a great job PS: any date french team Weird Weird but the links on page 1 are still working. They bring you to the app store I just did and installed fine. ----- Post added at 04:05 pm ----- Previous post was 4:03 am ----- Hello, I bought the Pro version (and waiting for French command support) you tell us to start the app with the G-Voice Assistant standard, but every time I start the App, I have G-Voice Assistant Pro, which also starts at 2 or 3 sec after that. Sent from my SM-N950U via Tapatalk I know. It took me 45 mins to sign up last Saturday. Samsung store has google keyboard. Could work. You're just talking. I could try it. Haven't seen the test version this week. It seems unavailable, I get an error message when trying to download. I'm interested in 3 copies of the Pro version when it becomes available again. Thank you. I was just notified that a new version was sent to the Galaxy store. Should be there within 3-5 business days. I haven't checked it. Last edited on: October 28, 2020 This is not an update for me. I click on update in the Galaxy store. Says installing. Then after some time says an update. Pro or kernel. Is there an update procedure? You don't want to have to spend 30min trying to login again. Any update to it yet? ----- Post added at 10:55 ----- previous post was 10:04 am ----- I uninstalled then reinstalled the new core app. I can't log in. Don't get input screen. I got stuck in a loop of the same dialogue. Anyone else can apply? Sent support email ----- Post added at 11:08 am ----- Previous post was 10:55 am ----- EDIT: It turns out it was Adguard Android blocking the Internet via Bluetooth. But just blocking the internet of voice assistant. And the Google Voice keyboard. CONTACT AG support. Last edited on 23 April 2019, at 18:40 Kudos Page 6 Thanks for the app, works nice. I want to ask something about the car listening to the hand up gesture. Should we make the app open to make it work, or does it always listen like a raise talk about Siri on an apple watch? Also the option auto screen unlock opens the app always when you turn on the screen. Is that what is supposed to be done? What I mean will be great is the app always listens to talk when raising the wrist, so it behaves exactly like a siri raise talk function. All this should happen in the background and warn the user that the team is fixed using haptic vibration. So we have a seamless always helper in our wrists without opening any app or pressing any button. All this would be possible because ok google team is running fine in the background. Thanks again for the amazing app. Thanks for the app, works nice. I want to ask something about the car listen on the arm up Should we be app open to make it work, does it always listen like raise talk about Siri on apple watch? Also the option auto screen unlock opens the app always when you turn on the screen. Is that what is supposed to be done?
