Gps sos panic button

Does Apple's (AAPL) experience to date selling the iPhone XS and XR suggest that it needs to drastically rethink its high-end iPhone prices? Probably not. However, it might suggest that Apple is better off sticking with its traditional formula for selling cheaper high-end phones, rather than changing things the way it did this year. As many readers probably know, Apple's shares have fallen sharply from their early October highs, thanks both to a technical correction and worries about softer-than-expected demand for its latest iPhones. The iPhone concerns have been heightened by sales warnings or guidance cuts from numerous Apple vendors, including Cirrus Logic (CRUS) (getting more than two-thirds of Apple's revenue), Qorvo (QRVO), Lumentum (LITE), Japan Display and AMS, as well as reports of iPhone production cuts. Jitters have also been heightened by the various measures Apple has taken to boost iPhone XS and (especially) XR sales. These include upping the trade-in deals it offers for older iPhones through its GiveBack program, more aggressively promoting those trade-in deals at Apple's physical and online stores and allegedly allowing iPhone XR discounts by Japanese carriers via subsidies. All of this has sparked arguments that Apple got too greedy with its iPhone prices, and is now facing the consequences. However, this statement glosses over the fact that the cheapest of Apple's three new iPhones, the 6.1-inch, LCD-based, iPhone XR which - judging by production cut reports, the XR exposure of vendors who have warned and Apple's attempts to promote the device - seems to miss sales expectations more than the more expensive siblings. And between the 5.8-inch iPhone XS (\$999 US starting price) and XS Max (\$1,099 starting price), it looks like the XS Max is better sold. Analytics company Mixpanel's data indicates that the XS Max accounted for 2.81% of the iPhone's installed base as of December 10, and the iPhone XS 2.26%. The XR (\$749 starting price), which went on sale five weeks later than the XS and XS Max, accounted for only 1.66% of the base. In summary, the cheapest of Apple's new iPhones, a device with a starting price halfway between those who wore the iPhone 8 and 8 Plus a year earlier, seems to have the hardest time living up to sales expectations. And the most expensive of the phones, a device with an unprecedented starting price, seems to fare the best relative to expectations. Undoubtedly, Apple's main flaw in this iPhone upgrade cycle was not with pricing per se, but the decision not to include its latest flagship iPhone (in this case, the X) keep around with a discount, and instead launch a brand new iPhone (the iPhone XR) that compromises remarkable hardware compared to both this year and last year's flagship phones (an LCD screen instead of an OLED display) features that make remarkable hardware compromises compared to both this year and last year's flagship phones (an LCD screen instead of an OLED display) that compromises remarkable hardware compared to both this year and last year's flagship phones (an LCD screen instead of an OLED display) functions, only one camera at the back, back, case, no 3D Touch support). This is the kind of strategic decision that of course can be easily avoided with next year's iPhone launches. Indeed, with The Wall Street Journal reporting that Apple has resumed production of the iPhone X, the company might not wait until next September to overhaul the low end of its high-end lineup, at least in some markets. Meanwhile, the relatively healthy demand seen for the iPhone XS Max indicates that a flagship phone with premium prices can still sell reasonably well if it delivers a major hardware improvement or two. There was clearly some pent-up demand for an iPhone X-type device with a larger screen, and the XS Max addressed it. With global smartphone sales clearly under pressure as upgrade cycles lengthen, it's still fair to wonder how much iPhone unit growth Apple will see in the years when it's not delivering major hardware changes. However, that doesn't mean the company needs to hit the panic button when it comes to iPhone prices – especially given that the earnings growth strategy increasingly revolves around growing average sales prices (ASPs), services revenue and sales of complementary hardware, rather than significantly growing iPhone volumes. Keep up to date with the latest daily buzz with the BuzzFeed Daily newsletter! published on 01/24/2020 Photo (c) Wachiwit - Getty ImagesPersonal safety is starting to get the attention it deserves from connection-driven companies. First, there was Uber's integration of an in-app 911 text feature to increase passenger safety amid reports of sexual abuse. Now dating app Tinder is getting started by adding three new features to its app: a security service that connects users to personal emergency services; Photo authentication, which compares a posed photo taken in real time with the profile of photos, which can verify the authenticity of a match and increase confidence in member profiles; and an in-app Safety Center. Every day, millions of our members rely on us to introduce them to new people, and we are committed to building innovative safety features powered by the best technology that meets the needs of today's daters, said Elie Seidman, CEO of Tinder, announcing the new features. I am proud to share these updates, which are an important step in continuing our safety work on an unparalleled scale. The securityTinder uses the Noonlight platform for its app, which allows users to trigger an alarm by clicking a button; users can connect other smart devices automatically activate alarms for them. Until now, most partners at Noonlight universities such as Washington University in St. Louis and Southern Methodist University.In Tinder's situation, the app's members will also be able to share details about the upcoming dates - including who, where and when they meet. It's kind of a bodyguard [and] quick backup for daters when a one meet someone for the first time, claims Brittany LeComte, co-founder and CCO of Noonlight. It's a unique additional security measure to protect Tinder members, even if they've recorded their interactions from the app in real life. If a Tinder user is in a dangerous situation at any time, a quick press on the Noonlight app will quietly contact Noonlight dispatchers who in turn send a text message to confirm the situation. If that text goes unanswered, Noonlight sends a code and calls it. If the user does not answer the phone at all, Noonlight sends emergency services. The Photo Verification feature allows users to make sure that who they meet is who they say they are. The feature uses artificial intelligence to give Tinder users access to a series of real-time posed selfies, which are compared to existing profile pictures of the person they meet. The feature is still in the incubation phase, according to Tinder's Safety Center. The team says it will treat it as an ongoing update to Tinder's overall security features. The following information is a single lesson in a larger Tinkercad project. Check out these and more projects on Tinkercad.Project Overview: This is a series of fun beginner level lessons to hone your amazing Tinkercad skills and get you started printing 3D models. A button is a simple, modest, almost forgettable thing. But look at them! These small, functional artifacts have been used by humans for thousands of years and they are just as varied as the people who created them. In this fun and easy lesson, you'll begin your design journey by creating a simple, yet highly functional, custom button. Once you've created one, there's nothing stopping you from creating another button for each button hole! Let's get started! InstructionsS Follow to the next step. Start by dragging a cylinder from the geometric shapes in the Shapes menu.InstructionsDrag from a cylinder to the work plane. Click the Z axis scaling handle at the top of the shape and scale it to 3 mm.Continue to the next step. A button is not very convenient unless you attach it to something. To do this, you need holes. Four is common. InstructionsDrag from a cylinder to the work plane. Hold down shift and grab one of the scale handles to scale the cylinder proportionally to 3mm in diameter. Click the property hole in the inspector menu. Duplicate the original hole and nudge (move) this duplicate 7mm to the right. Select both cylinders and click the drag button. Move on to the next step. Now let's put this group of holes on the button. The Align tool creates these holes for you in the middle InstructionsSSselect the hole group and the button text. By aligning the tool, you center your holes on your button base. Move on to the next step. Let's make the last two holes. Simply duplicate your original and turn them. Reusing existing objects and groups is a powerful way to quickly create new things. InstructionsSSselect the button base so that only your original hole group is selected. Duplicate your hole group and turn it double 90°. The Z-randomize all your shapes and group them together. Move on to the next step. In the next lesson you will learn to make a custom stamp! Next lesson: Make a Trick Die Skip to headerSkip to the main contentSkip to footerFor most people, their 401 (k) is their biggest investment account, and the stock dropping during the last week of February has many people feeling pretty nervous right now. We all work hard for our money, so this is a natural reaction. But be careful: If you run scared, by selling shares now and moving to cash, you might position yourself to lose money permanently. Remember, people who are patient during short-term dips or market corrections can achieve favorable long-term returns. A recent example of this was in December 2018, when the S&P 500 index fell about 19% from its peak in September of that year. The S&P 500 picked up quickly, up 31%, including dividends, in 2019.It is likely that there will be volatility on the stock market for the foreseeable future. The world will figure out the effects of the coronavirus, the Federal Reserve can cut interest rates, and it's an election year. All three of these factors are likely to lead to more volatility, both up and down. If you do not yet have a financial advisor to guide you on what is best for your specific situation, how do you manage their money in this environment? To achieve maximum long-term returns, here are several strategies to consider: View your investments and rebalance your portfolio. For example, if the current balance in your account is \$500,000 and you've decided that 75% of the total contributions should be shares, the market correction may have reduced shares to 65% of your portfolio. Remember, you want to buy low and sell high. By rebalancing and bringing stocks back to 75%, you will be able to buy more stocks at temporarily low prices. Review the percentage set aside for future contributions and make sure there is enough money in shares. The percentage for stock investments will depend on several factors, such as your personal time frame for retirement, but keep in mind stocks have a good chance of growing over time. If you don't have a financial adviser and your 401 (k) plan offers a goal retirement fund, select one that most closely matches your retirement time frame. The retirement funds have a team managing the investment strategy within the fund, so it is more geared for investors who want to set up and forget. Do not place all your contributions in cash. If watching your investments fall causes you heartburn, it is better to some money from stocks in bonds. If all, or a vast majority, of your 401 (k) is invested in company shares, think carefully about this step. Your human capital is 100% tied to your business – should your investments be too? In addition, any company match can also be made in company shares. Many executives and senior-level managers also have many stock options or limited stock grants, making them even more tied to the fate of their company. If you have less than five years until retirement, consider having at least 20%-40% of your 401(k) portfolio in bonds. The percentage depends on the total mix in your other investment accounts, how quickly you plan to sign off on this 401(k) account and your risk tolerance. For people who aren't going to retire for 10 years or more, you might want more in stocks, which can provide long-term growth and outpace inflation. Consider increasing the percentage of pay to your 401 (k) contributions, especially if you haven't contributed the maximum amount yet. The maximum is \$19,500 for people under the age of 50 and \$26,000 for people 50 and older. (For more information, see how much you contribute to a 401(k) for 2020?) Finally, if you are unsure about your personal strategy, or do not have the time or knowledge to properly invest your own nest egg, enlist the help of a professional. As you review your 401(k) contributions, note that you need long-term growth to generate strong returns. There will always be bumpy periods for the stock market, but maintaining a strategy for your contributions that meets your long-term financial goals should allow you to overcome occasional market declines.
