Tic tac toe python code copy and paste

```
def print_board(Board): print The board looks like this: for i in range(3): print , for j in range(3): if board[i*3+j] == 1: print 'X', elif board[i*3+j] == 0: print 'O', elif board[i*3+j] != -1: print board[i*3+j]-1, otherwise: print ' ', print if i != 2: print ----- otherwise: print def print_instruction(): please use the following cell numbers to make your move print_board([2,3,4,5,6,7,8,9,10]) def get_input(turn): valid = wrong, but not valid: try: user = raw_input([2,3,4,5,6,7,8,9,10]) def get_input(turn): valid = wrong, but not valid: try: user = raw_input(where do you want to place + (1-9)? ) user = int(user) if user >= 1 and user <= 9: return user-1 else: print
```
