IF THINGS DO NOT WORK, CLICK THIS View on Github Click, click, click! Get used to the sound of mouse buttons as you will have to click on your way to victory. Inactive games, also known as 'incremental games', require the player to perform very simple and repetitive tasks, such as continuously clicking on the mouse, to level up. Some games even deny the need to click, so they have become known as idle varieties. Due to the constant noises of the mouse, some people call these games 'clickers', but what makes them so popular? In simple terms, they allow easy mobile device sessions and because they are not demanding, attract a wide variety of players and guarantee progress. It doesn't matter if you're clicking to plant crops, bake cookies or collect coins, as long as you're leveling up and making incremental gains within the game, you're doing well. The really fun part is that these games tend to be endless in terms of levels, which means you can get to a point where everything is self-sustaining and in continuous growth, regardless of your entry. This is particularly enjoyable in terms of agricultural games, as you can start with a piece of barren land and watch your crops grow and become an entire ecosystem. If you like idle games, Gamepix is the place to be. We have created a large number of clickers for you to enjoy, and thanks to having been presented in HTML5 format, you don't have to worry about any browser or device incompatibility. Instead, you can sit back and click on the contents of your heart, sure to know that you're playing free and fully unlocked games that won't demand too much. You.
