## Smashbox foundation primer

Smashbox Photo Finish Foundation Primer is hugely popular in lotion with a series of prestigious awards such as Martha Stewart Weddings Big-Day Beauty Awards Winner 2013, Best of Sephora Awards for Best Primer, One of Marie Claire's 25 products that will change your life, and an InStyle Best Beauty Buy, which is Smashbox's best seller. It is a primer that can satisfy any user. Smashbox Photo Finish Foundation Primer - Light Oil Free is an oil-free primer, this formula is perfectly suitable for up to 60% water, very gentle, oily and sensitive skin. The composition is a mixture of vitamins and antioxidants, Smashbox Photo Finish Foundation Primer Light creates a very smooth lining, very smooth, hides pores and wrinkles perfectly, the next substrate is even more durable while keeping the tone long. Smashbox's innovative formula absorbs excess oil on the skin, increases lighter spread, makes your skin look healthier and more energetic. Also, vitamin C and peptides molecules in Smashbox Photo Finish Foundation Primer Light help skin tone while stimulating collagen production, so that your skin becomes more beautiful, smoother and smoother as porcelain skin. Winning Allure magazine's Best Beauty Award for Best Primer is enough to show that Smashbox Photo Finish Foundation Primer Lite is worth the investment! Smashbox Photo Finish Foundation Primer is a clear gel, suitable for all skin tones. As a primer with an oil-free formula, the combination of vitamins A and E and grape essence and green tea, not only helps to hide large pores and smooth existing wrinkles, but also reduce the appearance of wrinkles as well as reduce subsequent pores. Smashbox Photo Finish Foundation Primer brings a smooth skin, light skin, ventilated and very smooth, foundation cream on top even so that now, you will have a perfect makeup face! It's lucky that the Smashbox Photo Finish Foundation primer is not just a silicon liner, but more than that. Speaking of which I stood for myself 3s and asked myself oh, what about silicone? I have to apologize first if I offend people who are allergic to silicone or who do. According to the Long-Term Safety School and believe that the same experiments are equivalent to an amount of parabens poured into the aquarium that you use all year on your skin, which a Korean showed me at the cosmetics exhibition and tried to explain to me the damage fish death paraben. A harsh fact that most of the lotion products contain silicone, for what to do, keep the makeup long-lasting (imagine the type before painting directly on the wall, you will cover down a base, keep the color color long and not drift), so that the makeup becomes smoother, extremely smooth (silicone is a very popular smoothing soft), when using products with silicone, you see your skin or hair immediately smooth, and of course, try to mask some shortcomings (moisture as an occlusives of film wrap like silicone) to mask any makeup that doesn't become more beautiful on smooth background. The camera, 3600, gets hard to see a good filter like large pores, wrinkles, acne when looking through that membrane) and of course, save cosmetics (there's nothing to use a lot of foundation, chalk when just less is quite beautiful. Some lines confirm silicone, you suspect skin squish, in fact silicon is a membrane that breathes through large silicon molecules and helps to get back to air and other components. Imagine silicone like a plunge tea bag, when poured into the water, its task is to keep the internal components in a certain size, but the substance inside the outside can still pass through (the comparison may be a bit lame, but it's easy to understand). And while a lot of people say silicone causes acne or irritation, according to research by AAD (American Academy of Dermatology), with rosacea or acne patients, silicone-containing cosmetics can help reduce redness, main acupuncture and irritation (!!!), whether too much risk and washing is not clean, so long silicone on the surface of the skin is a problem. . . nor exclude some cases of actual allergy to silicone. Back to talk about smashbox photo Finish foundation primer, photo finish primer in smashbox family I like mistake, with a color most sketchy and . . . The most effective ingredients are cyclopentasiloxane (unstable, so it helps the skin to feel mildly thin, non-sticky) dimethicone crosspolymer, dimethicone, trisiloxane, silica, vinylidimethion crosspolymer. So when used, the feeling is smooth, smooth, smooth, which helps to substrate the long drift and limits oxidation, removing defects, as outlined above. The composition does not contain oil but has alkaline oil on the skin, I rated it as quite average (do not be surprised if you still see oily shadows in the middle of the day). The texture of the product is clear gel, odorless colorless so it is very pleasant and reduces the likelihood of irritation to some extent. Just such an amount is enough for the whole face. As soon as the application is carved, the face immediately disappears, but only the skin is softer, more luminous. I say very lucky because the product has other more practical ingredients with silicone skin such as vitamin A (retinal palmitate), vitamin E (tocopheryl acetate), fatty alcohol absorbing moisture, some other anti-aging extracts. If you notice, you'll know that Smashbox Photos are somewhat dup of Finish Foundation primer, like Dup Boss Annex with Studio Perfect Primer. An interesting question from here would be whether to spend \$36 (priced in the U.S.) for smashbox photo finish foundation primer or save more than a third of \$13 for a Nyx Studio Perfect Primer and the remaining \$23 on a good anti-aging lotion? They, for enough people, have nothing to choose for tired people, but for me, next time I will choose option 2 (because I don't have enough but :P) Smashbox Photo Finish Foundation Author Review
