One of the first things you will notice, and if you are an avid Photoshop user, will surely bring up at least a chuckle, is that of all the online image editors in the world, the least it looks like Photoshop is the actual legitimate Photoshop offer from Adobe. That said, the interface is easy to use and covers the basics well. One of the best features of Photoshop Express is the look of the movie strips provided along the bottom of the editor when using various customization tools. Instead of just giving you sliders to adjust saturation, white balance, and other subjective photo tweaks, Photoshop Express displays changes gradually, allowing you to choose your favorites from the gradient of choice. It's much quicker to tweak quickly than fiddling with sliders. If you want to use the slider, they haven't removed the feature yet; a more detailed slider is below the image, allowing you to fine-tune your heart's content. Under the advanced feature set, you'll find tools like tinting, sketching, and distortion. Adobe Photoshop Express is free but, unlike all the other nominees in Hive Five, it requires an account for you to use your own photos. If you just want to play around with it, the demo account contains a set of images for you to play with. Photo by pasotraspaso. PixlrPixlr takes a two-pronged approach to image editing. When you visit Pixlr, you can choose to use Pixlr Express or Pixlr Editor—seen here—depending on your needs. Pixlr Express is a simple image editor with a right hand toolbar that includes basic tasks like cutting, rotating, applying basic correction filters, and so on. Pixlr Editor looks like a more traditional photo editing app, complete with toolbars, menu bars, and even navigators, layers, and history panels. If you're familiar with desktop applications like Photoshop and GIMP, it won't take you long to find the location of tools like clone stamps, selection sticks, and gradient maps. Pixlr Firefox allows you to take pictures and screenshots from your browser and send them to Pixlr. PicnikPicnik does not attempt to emulate the desktop editor with its simple toolbar design, instead choosing to create the most popular high profile and easily accessible as possible. Picnik doesn't have a Photoshop-esque sidebar, palette, or other advanced features in the main editing window. The features it provides, however, are very intuitive and easy to use with tool tips that appear to help you use a variety of tools. If you want to change your photo beyond basic cropping and color correction, you can find more than 30 image filters and various tools (such as a disabled touch stick) under the Create tab. The premium version of Picnik is available for \$25 a year and gives you access to more advanced tools, special effects, and other amenities such as bulk uploads. Photo by jurvetson. Aviary PhoenixAviary Phoenix is an image editor that is part of the Aviary Suite of online editing tools, which—on top of image editing—offers vector editors and filters, among other tools. Aviary Phoenix has an advanced interface and many options to help you edit images, such as layering, mixing, and magic wand selection. You can use Aviary without signing up for an account, but with an account you can save your creations, collaborate with other users, and participate in the Aviary community. The Aviary Phoenix Firefox extension, called Talon, adds a variety of functionalities such as screenshots, quick image editing that you find online, and — unique among five Hive Five candidates this week — it adds support for pressure-sensitive input devices. The premium version of Aviary Phoenix is available for \$25 a year and unlocks advanced features and the ability to save your work to your Aviary account without adding it to the public areas of the Aviary community. Now that you have the opportunity to check out—and hopefully play with!—the nominee for best online image editor, it's time to vote for you in the poll below:See your favorites in the Hive? Can't believe your favorite didn't work? Still chuckles that one of the least photoshop-like deals is from Adobe? Let's hear it in the comments below. You can now clean up those photos and even do more sophisticated image editing than any internet café. Pieces of web-based photo editing programs have grown over the past year, mostly based on AJAX or Flash.Web applications we consider here range from simple photo toucher-uppers to Photoshop Wannabes. But none of them have yet been able to perform the really advanced functions that you will find in programs like Photoshop or Gimp. So you can choose the one that suits your needs, from simple image corrections to intricate artistic creations. They're all free, and mostly in beta at this stage, but we didn't find any showtoppers—just weird functions that don't, er, work. The interface varies from cluttered and complex to sleek and simple. We found that they all work in Firefox and Internet Explorer, although bugs often appear in one and not the other. We'll be in remission for not mentioning Adobe's plans for the online version of the great father of image editing, Photoshop. It has been reported that the online version of Photoshop will be free, with ads, but we have to wonder how much you will get for free, at an exorbitant price (\$649) for the installed software. Q again, the service here works and is available to try now. The online Photoshop version of Adobe is about six months at the time of this writing. Whether you want a soothing beige, an interesting picture, or something in between, Outlook allows you to customize the background of your email. Personalizing your email background can be a useful way to make messages stand out or advertise a personal brand. You might just want to save the recipient from a white background that burns the eyes. After all, it becomes a little overwhelming after staring at the monitor all day. Whatever the reason, adding colors or images to your email is easy. First, open a new email in Outlook. Place your cursor in the body, then click Options > Page Color. Next, choose a solid color if you want something simple (we choose light blue). If you don't like the default, click More Colors.. Click the Custom tab, and then use the controls to select any color that you want. If you need inspiration, here's a complete color palette with RGB and Hex values for every color imaginable. If a regular color background doesn't crop it for you, or you want to add a picture instead, click Fill Effects. Here, you'll find four options for changing the gradient of your email's color, texture, or background pattern, or applying the image as a background. Gradients allow you to select one or more colors and apply transparency and shadow, such as this soothing mix of pastel yellow and blue with diagonal shadows. Texture allows choose a background, such as Papyrus, White Marble, Woven Mat, Recycled Paper, and Purple Mesh (shown below). Patterns offers a number of geometric designs with the option of two different colors. Sometimes, you might just need to add a little pop, like red and black motifs are shown below. Finally, on the Draw tab, you can select a picture to use as your background. To get started, click Select Picture. This opens the file selector, so you can navigate to the image you want to use. Select the image you want from your device, Bing, or cloud storage area, then click OK. The picture will now be the background of your email in Outlook. You must apply this background effect every time you create a new email in Outlook. If you use one or more regularly, you can create templates to save time and effort later. Then.
