Kaiser covid testing hours

How do I get the COVID-19 test? You can plan your OWN COVID-19 test kp.org via e-visit. An e-visit is a way to get testing or some treatment without a doctor's visit. Just select Coronavirus/COVID-19 Concerns from the e-visits menu. If you have COVID-19 symptoms All patients with COVID-19 symptoms may schedule a COVID-19 test without a doctor's visit, unless their symptoms indicate a medical emergency. For some covid-19 symptoms, a doctor's visit will be recommended in addition to the COVID-19 test. However, a visit to the doctor is not necessary before planning or getting the COVID-19 test. If you do not have symptoms of COVID-19 there are many patients who benefit from COVID-19 testing even if they do not have symptoms. We offer tests on asymptomatic members who are in the following groups: first responders, front-line health professionals, and more than 27 other non-health care professions declared county, state or federal regulations to be basic workers that require testing. These include teachers, transit workers, catering workers, agricultural or food production workers, retail and manufacturing workers who often communicate with the public, and workers providing home care for the elderly or people with disabilities. Anyone who is in close contact with a person with a confirmed case of COVID-19 Residents and staff of the facility where many people live together, including nursing homes and other assisted living facilities, correctional and mental health facilities People who live or work in an environment with an outbreak People to be tested by the Ministry of Health (excluding general supervision, which is done at specific places for public health testing agencies) Kaiser Permanente patients before surgeries and certain procedures People must be tested before visiting their dentist People who often spend time in the crowd or on public transport Those who are looking for testing to return to work or college or to travel Testing appointments are usually available within 1 to 2 days and sometimes earlier depending on demand and capacity. Test results are usually available in 2 to 3 days. Should I get tested before attending a party, holiday or special event? The safest way to prevent COVID-19 is to avoid social encounters with someone you don't live with or who isn't part of a small group you've already communicated with. Keep in mind that the negative test result now only shows your status at the time you obtained the test. This does not prevent you from getting or spreading the virus when interacting with others. Due to these risks, we do not recommend relying on the test to decide whether you should attend a social meeting. If you decide to be part of a social gathering, be sure to take precautions, including wearing a mask you do not eat or drink, practice physical distancing and often wash your hands. What are the different types of COVID-19 tests? There are 2 different types of clinical trials. One shows if you are currently infected with a virus (diagnostic testing) and the other helps you understand if you may have been infected in the recent past with a virus (antibody testing). Diagnostic tests for COVID-19 tell you if you're infected right now. This is done by collecting fluid from the nose, throat, or lungs. If the test shows that you are infected, you can isolate it to prevent it from spreading. Testing also helps your doctor treat you, and helps public health agencies monitor the spread of the disease. A positive result of a diagnostic test does not mean that a person is protected from COVID-19 in the future. Testing antibodies for antibodies to antibodies in the blood from a previous infection. A positive test does not have to mean that a person is protected from COVID-19 in the future. People who have tested positive for antibodies or have recovered from the virus should still take steps to protect themselves and others, such as physically distancing themselves, washing their hands and wearing masks in public. How is diagnostic testing performed? There are 2 ways to test for the current COVID-19 viral infection: A nasal swab - a doctor or nurse inserts a 6-inch-long swab into one of the nostrils and rotates it for 15 seconds. Then they are repeated with the second nostril. Cervical swab - The caregiver inserts a swab through the mouth, touching the back of the neck before removing the sample. We follow the public health guidelines for COVID-19 testing. By carefully selecting places, we can help ensure sufficient physical distance to protect you and everyone passing through. All our employees wear appropriate personal protective equipment to care for people who may have tested positive for COVID-19. Who is being tested? We test all members with symptoms or suspected exposure and offer tests to asymptomatic members who are in the following groups: first responders, frontline health professionals, and more than 27 other occupations that are not declared necessary by district, state, or federal regulations in the health system, requiring testing. These include teachers, transit workers, catering workers, agricultural or food production workers, retail and manufacturing workers who often communicate with the public, and workers providing home care for the elderly or people with disabilities. Anyone in close contact with a person with a confirmed case of COVID-19 Residents and staff of facilities where many people live together, including nursing homes and other assisted living facilities, correctional facilities and mental health facilities People who live or work in an environment with an outbreak people to be tested (excluding general supervision , is performed at specific places of public health supervision) Kaiser Permanente patients before surgeries and some procedures People need to be tested before visiting their dentist People who often spend time in the crowd or on public transport Those who are looking for testing to go back to work or college, or travel How much does it cost to test? Testing and diagnostics at Kaiser Permanente are available free of charge for members. Can I get tested outside kaiser permanente? In addition to testing available through Kaiser Permanente, you may choose to be tested in an external licensed independent device (such as CVS, Walgreens, Walmart, other retail locations, or in a private lab). Many of these devices bill Kaiser Permanente directly, so you don't have to pay anything out of pocket. But if you are charged, Kaiser Permanente will provide compensation for the cost of the test if it is carried out by a licensed facility. Here's how to apply: Go to kp.org/coverageandcosts. Under Useful Resources, click Submit Claim. Under Complaint forms, click the PDF you want to download. (If you are redirected to our claim service website, select Documents and Forms from the Resources menu and download the medical request form.) Fill out the form and send it to the address indicated in the form. Remember that if you have a positive test outside of Kaiser Permanente, your results are not shared with your doctor's office. Send an email-scanned copy of the test results to your Kaiser Permanente doctor's office so we can update your medical record. The message should contain your name and at least one other personal identifier, such as your date of birth. Go to kp.org a new report to your doctor's office using COV19 outside the lab report. Click the Attach Picture link at the bottom of the message to add the scanned report. Follow the instructions you get with the result of the test on isolation and physical distance. If you need advice, please call our 24/7 helpline. What should I do while waiting for test results? If you have symptoms or have been in close contact (less than 6 feet for more than 15 minutes) with someone with a confirmed case of COVID-19, it is important to self-isolate while you wait for the test results. If you have a positive test, you should isolate it for 10 days (or longer if your doctor tells you to), or until your symptoms improve and you haven't had a fever for 24 hours - which is longer. Depending on local public health requirements, you may need to be fever free for more than 24 hours. Your doctor will let you know if this is the case. What if I tested positive for COVID-19 but have no symptoms? If you do not have symptoms but test positive for COVID-19 to prevent transmission of the virus to other people, you would still isolate for pro days from the day you receive the test. During this time, you should also monitor whether any symptoms appear. What if I have a negative test for COVID-19 but continue to have symptoms? Continue to treat any symptoms at home and self-isolate until you are without fever for 24 hours. If your condition worsens, please call our 24/7 helpline. Can you test the other members of my family? Family members who are Kaiser Permanente members can schedule a COVID-19 test on kp.org via e-visit or email your doctor's office to schedule a test appointment. How do I get the test results? If you have been tested on Kaiser Permanente and your result is positive, you will get a phone call from us with results and steps on how to get care. Your result will also be available in your medical record on kp.org. If the test is negative, you will be notified kp.org. When do I get the test results? The response time for diagnostic testing is usually up to 2 to 3 days. But the timing may change based on demand and testing capacity, and whether the test is processed in a Kaiser Permanente lab or in a private commercial lab, which can take longer to announce results. We prefer our laboratory testing and can use private laboratory services for asymptomatic, less urgent cases. What should I do if I don't hear about my test results? Results?
