But while this is certainly a factor that plays into your purchasing decision, some other things like size and price also play into the decision that you will make in the battery kit to get. Here, we have created a simple guide on which drum kits are available as well as whether they suit your needs. Increasingly popular within the market, electric drum sets go from extremely affordable to incredibly expensive. However, they are an incredibly popular choice for experienced and novice drummers as they are much quieter than other types of drums, don't take as much space, and are highly portable to boot. Electronic battery kits also give drummers access to a much wider range of sound due to noise being generated electronically when activated rather than through vibrations such as a would-be acoustic drum. They also offer options when it comes to drum functions that can cater to both beginner batteries and more advanced players. Experienced drummers may wish for an electric drum set that comes with more realistic features like to look more like an acoustic drum kit, while beginners may not feel the need for such a complex kit, and be more suited to a more affordable starter drum kit. Rock The most popular type of drum kit, often seen in movies and music videos. When most people think of drum sets, they will most likely be thinking about these. These types of drum kits take some space and consist of 12, 13 and 16-inch tomes, and a 22x18-inch bass drum. The size of the trap often varies, but the size is around 5 1/2 inches or 6 x 14 inches. The bigger the trap, the stronger the attack, and they offer a deeper tone and higher volume. This ensemble is favored by heavy players and those who usually play rock music, or those who play their drum sets with much more power. More suitable for live performances than recordings, this drummer is suitable for both experienced and beginner batteries. Fusion Slightly smaller than sets of rock drums, fusion drum kits consist of 10, 12 and 14 inch tomes, with a 20-inch bass drum or Inches. Higher in tone and more suited to softer music, this drum set is usually used in fusion and jazz music. Because they are much more compact and quieter, this is also a great battery kit for constantly moving batteries or those with less room for a kit. While not as strong as a set of rock drums, they have a faster response and are suitable for drummers who enjoy playing fast.
