Flickr photos copyright free

Shortcuts: COM:F- COM: FLICKR Flickr allows free hosting of images based on a variety of permissions, some free and some not free. Flickr allows users to choose the license of their choice and change it at any time, without having to log at the previous copyright status of the image. This means that there is no easy way to verify that an image that is not currently marked as free has been posted under a free license. This can cause problems in the use of these images in Wikimedia projects. See also Commons:License Review. Commons uses a review process to verify the copyright status of images uploaded from Flickr, which allows you to verify freely licensed images by a bot or trusted user (admins and community-approved users) and to identify images where the Commons license is different. This method cannot tell if the image was ever freely available. Questionable Flickr images [edit] Some Flickr users can upload images they don't have the right to and then incorrectly license these images as free. When Commons users flickr accounts for this in order to upload non-free images to Commons, it's called Flickr Washing. Commons: Questionable Flickr images lists Flickr users and discussions where we have concluded that certain images marked freely licensed on Flickr are beyond questionable licensed Wikimedia Commons. Policies[edit] Images must be tagged {{Flickrreview}} with FlickrreviewR 2 or administrator for review. Images verified as freely available will be considered free, even if flickr's license changes. Images that are no longer freely available at the time of the review should be marked as possibly unfree until a decision is made on what to do with them in commons talk: Flickr files. Static links [edit] One of the problems when checking licenses for images coming from Flickr is some users provide a static link to the image on Flickr, but the description page shows the license. This makes the control very difficult because you have to search for Flickr pictures et hoping to find a good tag that leads to a good image. For reviewers, here is an easy way to find the description page from a static link: Extract the image ID from the static URL and photoend it to : https://farm1.static.flickr.com/153/357298706_b406a56e06.jpg example, the description page for the . Another use Flinfo and just enter the static URL. Flinfo knows how to handle a wide variety of Flickr URLs. (By the way: you can also download information about picturesoother containers, such as Picasa or panoramio.) Manual[edit] Public Domain Mark[edit] The Public Domain Mark (PDM) is a tool created by Creative Commons that identifies works that are already known to be part of the public domain, but does not specify why these works are in the public domain. Domain. Some photographers mark their own photos with PDM, believing that their work will be made public. After several debates,[1] the consensus in the Commons is that although Public Domain Mark is not intended to be used as a licence, it is reasonable to conclude that when an author uses PDM for his or her own work, their work is declared in the public domain. PDM is often used on Flickr for works that are not copyrighted or where the copyright has expired. For example: Such works can be uploaded, but you need to figure out the first one that license applies! If you need help, ask for copyright village pump. The Commons on Flickr [edit] The Commons on Flickr hosts a number of files from different institutions that state that there are no known copyright restrictions. What this means for Wikimedia Commons is unclear, and keep in mind that some institutions (such as the Smithsonian Institution's Terms of Use) strongly contradict the No Known Copyright Restrictions, Copyrights, and No Commercial Use. Therefore, you should be careful about uploading such images to Wikimedia Commons. See {{Flickr-no known copyright restrictions}} and mail on commons-l, with discussion by George Oates, Flickr employee heading The Commons, expressing some reservations (The Commons on Flickr announcement). Search Flickr [edit] Is a great way to find images on Flickr that can be uploaded to commons using your search tools. You can start with a simple search (limited to freely licensed images only), and then type a query. Or, on the Advanced Search screen, select Any License, and then choose Commercial Use & Mod; Enabled Mods from the menu to make the setting for Commercial Use & Mod; Mods allowed instead of any license default. You can also search with specific licenses, such as 2.0 or by-sa-2.0. Magnus FlickrFree tool shows you the last 500 free license images uploaded to Flickr and allows you to easily import them into Commons. The {{Flickr free}} template allows you to search for images under both licenses. Change licenses[edit] Even images with Creative Commons licenses (a small minority) only have about 20% Commons-compatible licenses (brown and yellow sectors, see image). If a file on Flickr is not allowed on CC-BY (Assignment) or CC-BY-SA (Assign and Share Both) or CC0 (Public Domain Dedication), or marked with a Public Domain Mark, it is generally not allowed in the Commons. However, because the copyright owner can change the license for their work, it is possible to request that the image be released under a Commons-compatible license. Such et the best sent an email to a Flickr user from inside the Flickr website. You will need a Yahoo! account for this (the Flickr part of Yahoo!). For more help, see Commons:Flickr files/Appeal for license change. It is possible that the the license for a CC-BY(-SA) or CC0 or PDM image may change on Flickr after it has been uploaded to Commons and verified. Flickr users are allowed to change the licenses for their works. However, it is important to note that if a work becomes available under a particular license, the copyright owner cannot modify or withdraw the license on copies of that work. Thus, an image was originally licensed by CC-BY and uploaded to Commons under that license (and verified), but later changed to Flickr with all rights reserved, continuing the Commons with the CC-BY license. Such a situation is undesirable, of course, and politely asking a Flickr user to review it may be a good idea. In the meantime, you can mark the file {{Flickr-change-of-license}} to indicate the license discrepancy. If a Flickr user changes the work license to a freer version (e.g. CC-BY-SA for CC-BY-RE), the instance on Commons can be updated to use the new license. Simply remove the existing Flickr review template and request a new review {{Flickrreview}}. As above, however, if the Flickr user changes the license to a less-free version (e.g. CC by to CC-BY-SA), Commons is not required to match it as the freer license is not revoked. Upload Images[edit] Shortcut: Use Magnus Upload Tool (known below) Guidelines [edit] When uploading images to Flickr, please: Upload the largest version of the image and use the Flinfo tool, which is an already filled version of Template:Information for an image on Flickr. Enter the image ID or the full URL of the Flickr image. Flinfo can also handle static Flickr URLs. It would be polite and collegial to leave a comment on the image flickr page which says it was uploaded to the Commons. If the user has blocked commenting, it sends them a message instead of flickrmail. If an image is only available in low resolution, the user may have original-resolution photos on the local disk, so contact them while uploading the low-resolution version to see if they can send higher-resolution photos. [edit] Easy to use: Less simple: Commons upload form: Upload the work from Flickr (requires downloading the image to your computer and

then uploading it); Flominator's Flinfo helps Odie5533's F2ComButton use greasemonkey script support to upload. One option fills out the most upload forms for you, another option helps you use the Magnus tool above. Video[edit] The video was uploaded to Flickr. Flickr has many short videos like this See also Commons: Video. Flickr now allows video files to be uploaded. However, these do not currently be transferred easily like photos can. The uploadable copy of the video or ask the uploader to provide a copy (e.g. by email). Use Flickr api explorer to download. Enter the video ID (the number in the url). The result is appearance Site MP4 and download the URL from the source box. Because these files are in MP4 format, which Commons does not accept, they must first be converted before uploading is possible (see Help: Convert video for settings). You can upload videos from the Upload Work page on Flickr. Alternatively, toolabs:video2commons can be used to automate much of the transfer process. See also [edit] 1 Village pump discussion on creating PDMark-owner Flickr as a good source of photos that are licensed under Creative Commons. Images licensed under a Creative Commons license are still protected by copyright, but the creator or copyright owner has chosen to allow others to use their material under certain conditions. Depending on which license is attached, Creative Commons images are free to use in educational materials, research publications, blogs, wikis and other websites, university publications, and MOOC. Not all photos are available on Flickr under the Creative Commons license, so this guide shows you how to limit your search to Creative Commons. How to SearchGo the Advanced Search page on Flickr - the All Permissions drop-down menu and select All Creative Commons to search for all Creative Commons licensed images. If necessary, you can further restrict your search to images that can be commercially used (for example, in moocs) or to images that can be modified or adapted. Find the search bar at the top of the page, type the search terms, and then click Find Photos. On the search results page, browse the images you want to use. Below the image are creative commons license icons and Reserved Individual Rights. It is important to check the terms of the license and to ensure that they comply. Click the Reserved Individual Rights link to see the full license text. The following symbols indicate the terms of the license:Assignment - The image must be attributed in the manner specified by the photographer. If nothing is specified, a proper subpoena must be issued. No derivative works - You can only use the image as it appears. You can't change, modify, or modify the image in any way. Non-commercial - The image cannot be used for commercial purposes. Share equally - If you change or build on the image, you'll need to license new images under the same license as the original image license. Click the Download icon in the lower-right corner of the page to download a copy of the image. You can choose the image size you want. Make a note of the title, photographer's name, and image URL so that you can attach it correctly. All Creative Commons requires you to use the images you are using as attributes. There are specific specific as for the assignment of copyright material - the subpoena must include the title of the work, the name of the creator, the link to the website as the host of the image and the type of Creative Commons license for the work. If the creator has requested that they be assigned a particular way, try and follow the request. If you use the image in print or digital without hyperlinking, the assignment must contain the text of the URLs. If you want to use a specific citation style, see re:cite (, the library's citation guide. If not, here are some examples of how to assign an image:Learn more
