Milwaukee rechargeable headlamp review

QualityFeaturesPerformanceValue Regardless of industry or hobby, light is valuable. For the longest time, torches are governed as portable portable options. On mining days, hardhats wore mining lights for hands-free use. For us, this convenience is not dead. As a gadget enthusiast, I have a lot of headlamps. One real thing about headlamps is that they're not all created in the same way. I own some strictly for hobbies with super concentrated LEDs, some for cycle paths at night and camping, then, of course, some for approximate use. That said, I had to test the Milwaukee. So let's move on to the Milwaukee 475 Lumen Headlamp Review. Milwaukee is a smart choice for any hobbyist, professional, or homeowner. In the weeks I've had it, it's proven to be one of my favorite beacons I own and my access point for use on projects. Easy operation and charging contribute to a very impressive product, typical of Milwaukee. Milwaukee 475 Lumen Headlamp Review Overview As indicated above, light is valuable when working in areas of low light or simply to improve visibility in your workspace. More importantly, it's being able to work hands-free. It goes without saying that most homeowners and professionals appreciate a good projector. For me, I value one that is not only bright but durable and comfortable. The Milwaukee (model 2111-21) covers these requirements and overcomes them. First of all, the 475 lumen LED mode is more than enough to do the job. But, if this is too bright, there are other options that are not that intense. On the other hand, they also don't affect your running time that much. The selector switch on the unit allows you to go through 475,300,150 and 20 lumens respectively, in spot & flood beam mode. The execution time for these options ranges from 2 hours to 475 lumens, up to over 24 hours to 20 lumens, which is a great efficiency. To power all this are the Milwaukee Red Lithium rechargeable batteries, contained inside the unit. The batteries are removable, so in the strange event that you would go bad, the unit is usable. In addition to power and performance, the unit is comfortable. Many headlamps on the market are heavy, clumsy and, in general, don't fit well, but Milwaukee did well. The light is durable and lightweight, with a quality elastic band to hold the unit firmly on the head or helmet. Milwaukee 475 Lumen Headlamp Review Presents The elastic band of the head lamp is strong and features a rubberized honeycomb design that offers a lot of grip. The beam is extremely bright at 475 lumens and sufficient for any work, with the other settings. A bonding point between me and the headlamps (literally!) is always the grip of the forehead. Milwaukee has put a giant piece of padded rubber like this piece and actually serves pretty well even against sweat and moisture. The strap is also on the Milwaukee. While most companies are cheap for a thin, thin piece of rubber band, the Milwaukee is built with a very thick, sturdy piece to keep the light attached to the head or helmet. The included hardhat clips are made so that the light can be easily attached to all kinds of hardhats. The clips are made of a thick polymer plastic that will hold against almost any shock or thud. As seen on the buttons and around the LED housing, the rubber is intended to keep out debris and moisture. This light is specifically evaluated on IP54, against the intrusion of water and dust. My favorite feature on modern headlamps is the ability to charge via USB, and Milwaukee is no exception. This projector uses a standard 5 v micro USB for charging, perfect for the field or at home. The range of LEDs throughout the business end is protected by a rubberized protection and thick plastic to prevent cracks and breakage. The entire housing is resistant to shock, debris and water. Like most headlamps, the Milwaukee can be hung up and down to give you the best field of view with your light. Even after pedalling the canting capacity of 6 positions a lot of times, it was still nice and tight and wasn't bumped out of place when working under vehicles. Milwaukee 475 Lumen Headlamp Review Value A about \$60, this light is not a cheap date. However, what you get is a limited lifetime warranty on the unit itself, with a 2-year warranty on the RED Lithium battery. For me, and compared to other lights made specifically for harsh environments, it's damn good. What you get is also the tangible feel of a Milwaukee product. Tenacity, durability and reputation are with any Milwaukee tool. I was pleased when I opened the package to find that the light itself, strap, hardhat clips and even the braided USB charging cable were all of high quality. You simply get what you pay for with this light. He is impressive and leads the group against the competitors. Milwaukee 475 Lumen Headlamp Review Final thoughts All in all, I usually have some criticism when I review the instruments, but I can't find one for the Milwaukee Headlamp. Even in terms of areas for improvement, Milwaukee doesn't leave much room! Simply check all boxes on durability, build quality, running time, battery and functionality. With the price in mind, it may be difficult to suggest this unit for the homeowner, but it will definitely last a long time. For professionals or enthusiasts, Milwaukee is a breeze. That said, I can't wait to keep putting this projector through the ringtone, and maybe even take it in. to test that IP54 rating! © 1996-2014, Amazon.com, Inc. Unlike your clumsy alkaline, alkaline, one works with a rechargeable RedLithium USB battery. ProsSlimStrap front profiles is comfortable for the bare head and universal clips prevented it from going anywhere with a hard hat!IP54 rated at 6 feet of tested dropThe rechargeable lithium-ion power source is located on the back of the ConsLow Rider strapThe Milwaukee low-profile projector is designed to sit near the head. By putting the battery around the back of the strap, most of the projector remains off the road. This design also handles weight distribution better. Instead of feeling as heavy in front as the typical projector does, the Low Profile model puts the weight in a more manageable spot. Sure, most headlamps won't break your neck anyway with an overabundance of weight, but this design feels more comfortable to wear for long stretches. Putting the battery in the back of the head means having a wire that goes from the lamp to the battery, but Milwaukee binds it and stays pretty tight against the head. The light itself is only 1 thick and hugs the forehead very closely. It stays out of your field of view, yet, with its 125" flood beam, it manages to illuminate a large area in front of you. It is also equipped with a hinge if it is necessary to tilt the light down towards the hands. With a hard hat hem, you'll lose a certain range of movement from the zipper, but otherwise, it can swing a little to less than 90°. Light quality and runtimeThe Milwaukee low-profile projector has 4 different TrueView light settings. This is Milwaukee's proprietary high-definition light... which basically means that rather than leaning on the cold or warm side of the color spectrum, the light output on this projector is right at neutral. This simulates midday sunlight, giving anything you turn on a true representation of its color. The four settings are a high setting of 600 lumens, an average setting of 350 lumens, a low setting of 125 lumens, and an Eco mode, which fires 25 lumens. In terms of runtime, you can expect 2 hours of high setting, 6 hours on average, 10 hours at lows, and 27 hours at Eco. When you run out of juice, charging via the included USB cable is pretty quick. Milwaukee says the low-profile projector will return to a 50% charge in less than 30 minutes, 80% in less than an hour, and will return to full power in less than 2 hours. The battery compartment also includes a fuel indicator to let you know where you are. The Milwaukee low profile projector is ip54 classified against water and dust intrusion, and is rated 6 feet. It is also equipped with a corrosion-resistant body and lens. It comes with a micro USB cable for charging and 4 clips for that fit into universal helmet slots. PricesThe low-profile Milwaukee projector costs just under \$70. It might seem like a prize if you're from the alkaline world, but it's actually a very competitive price in the 600 lumen lumen rechargeable Bottom LineMilwaukee makes it quite easy for us to recommend the low-profile projector, and the design is really what makes it work. With the battery placed on the back of the head, it feels balanced and comfortable on both hard hats and bare heads. It produces a good bit of light where you need it and its compact design allows it to do its job discreetly. But, perhaps the distinctive feature here is its rechargeability. I love being able to leave the AAA. Connecting the projector at the end of the day is much less odious than having to keep a battery stock nearby. It also loads pretty quickly. However, people who need a lot of light throughout the working day may want to invest in a second battery. At full brightness, you'll only get a couple of hours of runtime. But you will do most of your practical work at the bottom, which still emanates 125 lumens for 10 hours. Overall, the Milwaukee low profile projector is suitable for anyone who regularly works in dim or dark conditions.Milwaukee Low Profile Headlamp SpecificationsModel number: Milwaukee 2115-21Length: 3.3 66Height: 1.42B: 1.22Weight: 0.41lbPower Source: Milwaukee RedLithium USBWarranty BATTERY: Limited Life Warranty on Light; 2-year warranty on BatteryPrice: \$69.99For more information about the Milwaukee low-profile projector, click here.
