I have a free Movie Maker! If you don't know how to get the best free video editing software, you can try this method. Click to tweet after receiving and install Movie Maker, you can use it to create your movie. How to import files to Windows Movie Maker 1, add videos and photos, open Windows Movie Maker to get the main interface as shown below. Now you can try the following steps to import the file into Movie Maker: Click the Home tab, then click the Add Video and Photos button in the Add group. In the Add Videos and Photos dialog box, select the photo or video you want to add, and then click the Open button to continue. After adding a photo to Movie Maker 2012, you can change the duration of your photo. Sometimes you might get a warning. If the message appears when you import the file, wait until the program finishes previewing before trying to edit it. This may take a few minutes. Depending on the number and size of the files in your project, Windows Movie Maker also lets you. Movies using photos and videos imported from Photo Galleries, DVDs, digital camcorders or smartphones, you can read this post. To add pictures and videos to Windows Movie Maker for more detailed information. Click Add music option to add sound to the entire project. Select the music file you want to import, then click the Open button. 3. Add subtitles if you want to tell a story with your own words by recording subtitles for your movie. It is recommended to save in a quiet place without background noise. After importing the file, you may want to extract or trim your clips to create great videos. Read on to the Windows Movie Maker tutorial to find out more details. 2.Windows Movie Maker file trimming includes a trim tool to help you remove unwanted frames from the beginning or end of a clip. Try the following steps to learn how to use Movie Maker to crop smaller clips from larger clips. Step 1 Navigate to the point where you want to start the clip. Step 2 Click the Edit Video Tools tab, and then click Set Starting Point. Step 3 Navigate to the clip you want to end the clip for, and then click Set End Point. 3.is extracting the file is possible to cut the clip into smaller parts without losing any frames in the process? Of course, the answer is positive. If so, try the following steps to split the long video clip. In the storyboard pane, select the video point you want to split (or drag the vertical line to the desired location). Click the edit tag under Video Tools, and then click the Split button, so your video is divided into two small clips. 4. How to add transitions and virtual effects in Windows Movie Maker 1.Adding transitions between clip transition effects, Movie Maker presents many variations, including diagonals, melting patterns and shapes, revealing, diffuse, etc. How to use Microsoft Movie Maker to add transitions between clips Follow these steps: Select the clip you want to add a transition to. After selecting, you will find a square highlighted blurred. Click the Animations tab on the ribbon toolbar to open dozens of transition options. Select the desired transition effect. You can hover over the mouse to see what it looks like in the preview window before selecting it. You can adjust the duration of the transition from one quarter of a second to two seconds. 2.Adding pan and zoom effects while adding transitions between clips The pan and zoom effect (also known as the Ken Burns effect) refers to viewing static images as if they were animations. Panning and zooming of images brings the illusion of motion. Let's go down to the basics. Step 1 Select a picture, step 2, click the Animations tab, and then click the More button on the Pan & Zoom gallery. If you're unsure, you can choose an automatic effect, and Movie Maker will select it randomly. If you want to apply the same effect to all of your photos, you can apply the same effects to your photos After that you will see a small icon in the upper left corner of the image in the storyboard frame 3.Adding windows movie maker photo effects also has a lot of visual effects to give you a deeper set of visual flair. Select the clip for which you want to add a virtual effect. Click the Visual Effects tab on the ribbon toolbar, hover your mouse over a specific effect to preview and select 4.Remove transitions and virtual effects. In general, it is very easy to remove it. Remove a transition: Select the target clip, click the Animations tab, and then select the No Transition button at the leftmost part of the transition group. Remove a virtual effect: Select the clip attached to the virtual effect. I effectively add transitions and photo effects to my videos. Now I want to share this with everyone. Click to tweet Part 5 How to add text to a video in Windows Movie Maker: you can add titles, captions, and credits to your video to make it more authentic and show people who work on production. For example, here we will show you how to use Windows Movie Maker to add captions to a movie. Step 1 Select the clip for which you want to add a caption. Step 2 Click the Home tab, and then select Caption. Step 4. Enter The message Step 5 Select the font and style under the Format tab of Text Tools. In addition to captions, you can add titles to the front of your selected clips, as well as add credits (including credits, director, starring locations, and soundtracks) to the end of the sequence. With Windows Movie Maker, you can save your movies on your computer, phone, and other devices, burn your videos to DVDs in high quality, or upload your new movies to OneDrive, YouTube, Facebook, Vimeo, and Flickr directly from the program. Here to save the filmmaker as mp4, you can click the Save Movie button in the Home tab, then type a name for your movie and click the Save button.
