Rc flight simulator for macbook pro

Open the Mac App Store to buy and download apps. Please check the system requirements before purchasing ***** You should use this software with a dedicated joystick or R/C controller with at least 4 independent shafts ***DESCRIPTIONLearn to fly radio control models (R/C) with aerofly RC 7. When it comes to learning and improving R/C flying skills, aerofly RC 7 is the number one choice for R/C pilots. Along with our amazing model details and excellent landscape quality, you will feel as if standing on a real flying field. You can choose from a variety of models, like air acrobatics, helicopters, jets, gliders, scale models and quadcopters. After practice on aerofly RC 7, you will fly confidently and in instinctally at the pitch. Many game-like features and contests will test your pilot abilities that put real fun into your virtual flying! THREE VERSIONS TO CHOOSE FROMaerofly RC 7 are available in three different versions. When you buy this app, you will have aerofly RC 7 Standard Edition with a choice of 30 different models and 5 different landscapes. This version is a good start on flight control radio. However, you can upgrade your version at any time by purchasing an upgrade to the Professional or Ultimate version using an in-app purchase. The Ultimate version has over 200 models and over 50 landscapes! FEATURES • Choose from over 30 models and 5 landscapes (Standard Edition)• Amazing scenery with full Retina display support • Highly detailed aircraft with modern physics simulation • Stunning dynamic simulation for realistic flight feel • Set wind and time of day for challenging training conditions • Different types of models: Quadcopters, Electric and gas powered aircraft, helicopters, gliders, jets, and scale models • Fly with friends around the world in Multiplayer Mode• Suitable for multiple R/C generators and joysticks • In-app purchases are available : Upgrade aerofly RC 7 to Professional Version (170 models / 40 landscapes) or Ultimate Edition (200 models / 50 landscapes) both include additional features such as freely expandable models, Airplane editors, hover helicopters and torque REQUIREMENTS SYSTEMFlying R/C models: All models can be flown using only mouse and keyboard. For the best experience, we recommend using a dedicated R/C joystick or controller with 4 axes. IMPORTANT, the following graphics cards ARE NOT supported: Intel GMA 950 and GMA X3100Supported graphics cards:• NVIDIA GeForce 9600, 320M, 330M or higher with 512 MB or more• ATI Radeon HD 4850, HD 5670, HD 5750, HD 5770, HD 5770, HD 6750 or later with 512 MB or more• Intel HD Graphics 3000, Intel HD Graphics 4000 or Intel Iris Pro or fasterNOTICE: Some 4D landscapes require a quick graphics card for optimal performance. NOTIFICATIONS: The download size is huge and will take several hours to complete! On January 24, 2018 Version 7.5.3 This update fixed some minor bugs with the F-Schlepp feature and addressed mac OS High Sierra compatibility issues. My old simulation for my windows 7 stopped working after 3 years. Since I just bought a MacBook Air, I think I'll buy this simulator. Install it, works great, is very interesting and very satisfied with the simulator. My problem is that when I run this simulator, my laptop gets REALLY, REALLY HOT. The battery will go from full to shutting down the system in an hour. Without running this program, I can work on my laptop and run a boat load of apps literally all day long. My MacBoor Air laptop just got hot and burned the battery when I used this app. At this point, I have to decide whether I'll have the chance to fry my new \$1000 laptop to run this \$40 simulator. Any response or recommendation from the manufacturer will be appreciated. Would love to use this app some more if I can rest assured it won't fry my laptop. My great experience with the Standard version prompted me to upgrade to the professional version. I'm glad I did. The actual physics suitable for each model is further enhanced in the Pro version because of its ability to easily change model characteristics – size, engine power, weight, C.G. and many other features--- with every aircraft imaginable in exceptional scale detail. Basically you can double your own plane in virtual form, to practice. I have found the copying of model behavior in simulations to be very close to the actual performance and behavior of my own aircraft. Detailed graphics are amazing, the scenery and all the visual features are extremely realistic. Flying on the simulator is addictive. Great for hand-eye coordination practice. Want to add that Aerofly technical support very quickly and responsive when I had a small glitch----h they helped solve a download problem with my Macbook Air with a step-by-step procedure that worked perfectly. I've been flying RC for about a year. Nothing fancy, high-winged slow planes. Just get into trying to fly upside down and do nice and smooth rolls. Also just bought a 3D Parkmaster Pro. Borrow a friend simulator that I use on a Windows PC, but I have an IMAC and want to use it. Did some research and found this application. Wow, that's great. Much better than the simulation I used. I just have the standard version and what's nice is that you can upgrade at any time – which I'll do now that I know how great this is. I have a Spectrum DX6 but no USB stick to plug it into the computer. But, my PS4 controller works great. So I'm using that for now. If you're skeptical about this app, don't. It was amazing and made me a better pilot. THANK YOU AEROFLY!!!! Developers, IPACS, IPACS, does not provide details about data processing and security practices to Apple. Developers will be asked to provide privacy details when they submit their next app update. Support for dedicated website apps Open Mac App Store to buy and download apps. Please check the system requirements before purchasing ***** You should use this software with a dedicated joystick or R/C controller with at least 4 independent shafts ***DESCRIPTIONLearn to fly radio control models (R/C) with aerofly RC 8. When it comes to learning and improving R/C flying skills, aerofly RC 8 is the number one choice for R/C pilots. Along with our amazing model details and excellent landscape quality, you will feel as if standing on a real flying field. You can choose from a variety of models, like air acrobatics, helicopters, jets, gliders, scale models and quadcopters. After practice on aerofly RC 8, you will fly confidently and in instinctally at the pitch. Many game-like features and contests will test your pilot abilities that put real fun into your virtual flying! FEATURES • Choose from over 240 models and 54 different flight fields • 8 4D flight landscapes with adjustable conditions and suitable for flight follow-up mode • 46 high-resolution image landscapes with ultra-sharp Retina display support • Ultra-realistic surface and water reflections • Scale tissues shape up larger or less than twice as • Special radar window for improved orientation • Highly detailed aircraft with modern physics simulation • Stunning dynamic simulation for realistic flight feel • Set wind and time of day for challenging training conditions • Different types of models : Quadcopters, electric and gas powered aircraft, helicopters, gliders, jets, and scale models • Fly with friends worldwide in Multiplayer mode. • Suitable for many R/C generators and joysticks • StickMover supportsSYSTEM REQUIREMENTSFlying R/C models: All models can be flown using only mouse and keyboard. For the best experience, we recommend using a dedicated R/C joystick or controller with 4 axes. Supported graphics cards:• aerofly RC 8 is fully optimized for discrete graphics cards from AMD and NVIDIA • Integrated graphics cards are also fully supported, but some more complex 4D landscapes do not fitOS:• macOS 10.14.2 Mojave (or higher) recommended• macOS 10.13.6 High Sierra• macOS 10.12.6 Supported hardware:• iMac: iMac with AMD-GPU since late 2011 • Mac Book Pro: all versions since 2013 • Mac Book Air: all versions since 2013 • Mac Mini: all versions since 2014 • Mac Book Retina: all versions since 2013 • eGPU: alle official AMD-GPU-based eGPU module • Some more complex 4D scenes require dedicated AMD or NVIDIA June 21, 2020 Version 8.0.49 - Improved support when more monitors are used I just bought this yesterday and am getting settled in. It's still an interesting RC Simulator after all these years and changes. I can't make it work perfectly with my old Ikarus Game Commander (I can't get the throttle to idle without the planes taking off unless on the grass) and haven't tried it with my newer Ikarus interface and an actual player. I've found that it works perfectly with my big screen TV. No flickers or other issues. There's an error I've found so far – I can't get english units to show. Upgrade from RF7 to RF8. Works as expected. No matter the frame rate, any only small background tear on some 4d flights. Don't see that VR is there just yet for Mac. Would be 5 stars if we had VR support like any computer... I've been an RF user since 1997 – it has served me well but is on. I bought aerofly RC 8 as I have all macs (except my old RF pc). Wow, what a difference! I do not understand the opinion about the big screen - I have Mojave on Mac Mini with giant mailbox screen and iMac Pro 27. Both work perfectly without hiccups even on maximum re-degrees. I temper my enthusiasm with a few issues knowing how to get the best out of it. The Interlink RF and my Taranis connect immediately but only two sticks function for me now. I'm struggling as to how to get other channels from my radio recognized by RC 8. I'm sure it's possible but I don't know where to look. It seems like a Beta release right now! I am however, SO pleased to have a decent Mac RC sim in the end. PatrickSW Florida Developer, IPACS, has not provided details of security practices and data processing to Apple.
