Towaalabalatabalyuk PolandChanel 770Vectra 2 by + Channel 155Hubert Borskiuks PlusChannel 724Arrange TVChannel 676 4Fun.tv is a free-air 24-hour Polish language that was launched on February 14, 2004. Date November 27, 2003, a satellite transmission agreement has been signed with Nova Communications (later 4fun media) for canal + SPO.o. incoming music channel. On February 14, 2004, 4fun.tv broadcast tests started, and the channel's license for satellite broadcasting was given by the broadcast ing of the broadcast ing of the channel can be tlevizja at Krajova Rada Radawfona on 14th, 2004. [1] For some time in 2012, videos 4fun.tv on the channel and on sister channel The Bubble. TV was broadcast on The Police 2. [2] The channel primarily presents interactive programs in music videos, music programs, digital plus audio transmission and compression standards. In 2013, 4Fun Media created a 4Fun app for its viewers-requesting a second screen that allows access to additional content, quizzes and live contacts with viewers. Since December 19, 2013, 4fun.tv has been broadcast as part of digital pertyosi television on a local complex. [3] In 2016, the satellite operator awarded the station with an award in the best music channel category. 4fun.tv was the only award winning Polish station in the Euphret River to compete in the TV Awards 2016. In conflict 2007, Krajova Rada Radawfona i Expresses reservations about televisionja programs that affect the moral and mental development of young people by tilting and broadcasting over negative lying during a safe period (6 m-2 pm) and without proper office (programs for individuals only during the age of 18). The station ignored broadcasting council's alarm and therefore threatened to return the station's license, and consequently And end the channel broadcast. [4] Logo 2004-2014 2014-2015 2015 –

This article about a music website on the external contacts official website (in polish) is a receipt. You can help wikipedia by expanding it. Title = 4fun. TV &pid = 980685478 Page 2 is a 16:9 rectangular measure with a rectangular ratio. The representations are not square, remember that. 16:9 Is an LCD television set with picture ratio. 16:9 (1.77:1) A widescline aspect ratio is 16 units and 9 with a height width. Once seen as exotic, [1] since 2009, it has become the most common aspect ratio for television and computer monitor and is also the international standard form of digital television HDTV full HD and SD TV. This whole screen has taken place of 4:3 aspect ratio. 16:9 (1.77:1) (said as nine to sixteen) is the international standard form of HDTV, non-HD digital television and The Yanalog widescren television PALplus. Japan's high vision originally started with a 5:3 ratio but when the International Standards Group introduced a wide proportion from 16 to 9. Many digital video cameras have the ability to record 16:9, and 16:9 is just a widescreen aspect ratio in which dvd quality support supplys. DVD producers can also choose to appear as broad proportions: 1 and 16:9 DVD frames within 2.40:1 by the hard mat or by the picture itself adding black bars. However, it was used frequently in English TV during the 1990s. Date Data 16:9 Aspect Data Data shows the important data 4:3, 2:1, and 2.35:1 reciscitionwith the same area A, and the 16:9 rectores that cover it (black) or common to them (grey). Calculations are considered highly recisional, m and n are different to maintain their relevant aspect ratios and areas. Dr. Kerns H., a member of the SMPTE Working Group on High Definition Electronic Production, first proposed the 16:9 (1.77:1) aspect ratio in 1984, [2] When no one was making 16:9 videos. Popular choices in 1980 were: 4:3 (based on the tv quality ratio at the time), 15:9 (European Flat X: 1 ratio), 2:1 (US flat ratio) and 2.35:1 (Ratio for Canemoscowpi/Panavision Amorphifik widescreen). Forces cut off the rectors with equal areas, to meet each of the popular aspect ratios. When attached to their centre with extras, they found that the ratio of all these aspects fit within an external rectangular with side ratio of 1.77: 1 and all of them also have a small general internal rectangular cover. The ratio of the same aspect is 1.78:1. [3] The price found by options is the geometric allotof extreme aspect ratio, 4:3 and 2.35: 1, √ 47/15 ≈ 1.77:1 which is the manchster near 16:9. The same geometric mean technique applies to the production of a side ratio around 16:9 and 4:3: 1, sometimes as appravaamyted 14:9 (1.5396:1), just as these ratios are used as a contract. [4] While 16:9 (1.77:1) was initially selected as a compromise form, the popularity of HDTV broadcasts stabilizes as 16:9 is probably the most common video aspect ratio in use. [Reference required] The most 4:3 (1.33:1) and 2.40:1 video is now recorded using a shoot and safety technique [5] that holds significant action within a 16:9 (1.77:1) internal data [need for precedent] for hd broadcasting facility. On the contrary it is very common to use a technology which is known as center cutting, with each other without compromising the size of the image for both the content shot (usually 16:9) for both an HD and heritage 4:3 as well as at the same time. Material creator frames 1.33 to fit inside important materials or graphics: 1 rehapanespace. It has similiarities to a movie technique called Open Blur. After the original 16:9 action plan of the early 1990s, the EU has planned 16:9 action, [6] in 16:9 aspect ratio spacing to speed up the development of top-class television services, both in Paul and also in HD. 16:9 Community Fund for Action Plan allocated €228,000,000. During a long time in late 2000 and early 2010, the most common aspect ratio for changing the computer industry from 4:3 to 16:9 is for monitor and laptop. A 2008 report by Dasplysiarch cited several reasons for this shift, including to increase the range of their products by offering products with wide range screens and high resolutions to PC and monitor manufacturers, helping consumers to adopt such products easily and develop the Notebook PC and LCD monitor market. [7] Using the same aspect ratio for both TV and monitor, manufacturing is serious and does not need two separate sets of equipment to reduce research costs, and since a 16:9 is narrowcompared to a 16:10 panel of the same length, more panel glass can be generated per sheet. In 2011, Banni Bodlaar, Samsung manufacturer of its products in South Africa, confirmed that 1920 is monitorable x 1200 resolutions are no longer being prepared. It's all about reducing manufacturing costs. The new 16:9 aspect ratio panel seion se is effective for maximum investment compared to the previous 16:10 panel. [11] In March 2011, resolution 16:9 became the x commonly used resolution among 1080 steam users. The last most common resolution was 1680 × 1050 (16:10). [12] Properties 16:9 Is the only widescreen aspect ratio applications BY DVD SHAPE. Info Store (PAL) or 3:2 (NTSC) square pixels as inAmorfique DVD Transfer 5:4, which is set to increase to either 16:9 or 4:3, in which the television or video player handle. A pal with a full frame image may contain a video resolution of the DVD 768 × 576 (4:3 ratio), but a video player software will increase it in 1024 × 576 square pixels to re-create the right aspect ratio with a 16:9 flag. DVD producers can also choose to appear as broad proportions: 1 and 16:9 DVD frames within 2.40:1 by the hard mat or by the picture itself adding black bars. Some films that were made in one: 1 aspect ratio, such as american Italian co production man La Mancha and many of The Barnaga' Ado is quite comfortable on a 1.77: 1 hdtv screen and black bars without dvd has been released as a better version. Many digital video cameras have the ability to record 16:9. General resolutions for general resolution 16:9 are listed in the table below: Width Height Standard 256 144 426 240 640 360 nHD 768 432 800 450 848 480 854 480 FWVGA 960 540 qHD 1024 576 1280 720 HD 1366 768 WX GA 1600 900 HD + 1920 1080 Full HD 2048 1152 2560 1440 QHD 2880 1620 3200 1800 QHD + 3840 2160 4K UHD 4096 2304 5120 2880 5K 7680 4320 8K UHD Countries Europe in Europe Is the standard broadcast form for most TV channels and all HD broadcasts, 16:9. Some countries adopted the shape for The Yanalog television, first using the PALplus standard (now immutable) and then only using WSS on the normal pal broadcast.
