It blocks unwanted calls and spam messages. You can add any number to the or activate one of the blocking options: Private Numbers, Unknown Numbers and All Calls. You can also block any number of contacts, contacts and logs in your messages or manually enter unwanted numbers. Blacklist numbers are discreetly blocked without any call indication. The blacklist records calls, all calls and text messages in an event log. Don't worry, you'll miss an important call or message. This call block also has some practical adjustment options, including the ability to block private numbers or disable notifications. Features of the blacklist of Android PRO 3 calls: Blacklist numbers (blocking incoming and outgoing SMS) Call records and blocked SMS Blocking Anonymous (private) numbers blocking all calls Messages received as well as blocking all incoming sms call notifications as well as blocked SMS (may be disabled in settings) As this is a Premium version , so no ads will appear The phone is one of the smartest devices, and it has brought many benefits to serve life. Before the advent of phones, the most common way to communicate was to use mail to share. It will take a long time to receive feedback from others. But everything has two sides of it, and the phone has also become a new scam place for scammers. Every year there are many spam phone calls and scams that take place around the world and bring huge consequences. So there is an application that can help prevent this, one that can help this user is Blacklist Pro calls. Using These application jobs are simple; players don't need to do too much to apply. Once downloaded and installed on the user's device, you can easily use it. The user has to start the app, and then you don't need to do anything; The app is automatically made for the user. Previously, if you've used another app, you'll need to do a lot of things to activate the app and have to do it manually. But if you're using this app, all users need to download it and launch it for the first time. When it starts for the first time, the app requires call permissions to make the app work. Indeed, many people will worry that if you grant permissions to the application, it can pass through it to listen to the user's conversations. But for this application, it's completely impossible; The application was tested very carefully before being displayed at the store. Users can feel safe when using the app to block unwanted calls. Schedule to block There are times when a user must enter the activity room, which is the conference room, to have an important meeting. The mobile device must be completely turned off at such times because if a single call is needed, the user still feels unwell at even if there is no sound. And if you accidentally forget to turn off the notification mode, an alarm will be sent, then a bad consequence will await you. But when the user turns off, there are times when you forget to put the device back in place to receive calls. But this application is a tool for users to solve this problem. The app will provide users with a planned blocking feature that the user has installed. For example, every Monday from 7 a.m. to 10 a.m., the user will have a meeting at the company's company Report. The user can set exactly this time, and when the time comes, the app will automatically block all incoming calls. Once the requested time is over, the application will automatically shut down and let everything return to normal. The user doesn't need to do anything because it automatically turns off and allows the user's call function. Variety of choice Not only blocking, but the app also provides many different features so users can choose what they need. Calls made by unknown numbers can often be fraudsters, so users can choose to block unknown numbers. Or the user can block private numbers that the user has added to the blacklist so that the app can block them. Users can block unwanted calls, but the app can also block incoming messages when users need them. All user numbers added to the blacklist are calls and messages not sent to the user. Call List For blocked numbers, their calls and messages will not reach the user. But this is not true since the application can generate a list for the user to get. All call and text history of blocked numbers will be recorded here for easy access to users. Users don't need to worry about having a call or text from a critical person, but inaccessible because everything is recorded. This feature will ensure that users can easily find what they need on the list. The user can also remove the blacklist number to bring things back to normal. This app blocks both unwanted calls and text messages, and helps manage a blacklist. Easy and light, it doesn't consume any of your device's battery. If you're looking for a call blocker or SMS spam filter, this app is what you need. You can block any number on your contact list, calls and message logs, or add an unwanted number manually. Blacklist numbers are quietly blocked and without any sign of a call. Whatever you do, you won't be distracted by phone calls or text messages. Blacklist calls records all blocked calls and SMS in a newspaper. Don't worry, you'll never lose an important call or message. This call blocker also has some practical adjustment options, such as blocking private numbers, or disabling notifications. Features: Blacklist of numbers (blocking incoming calls and White list (numbers never blocked). Blocked calls and SMS log. Blocking anonymous (private) numbers. Blocking all incoming calls.
